Ah, but W1AW's transmissions are not intended for reception by the general public. Their transmissions are intended for those with interests in ham radio and Morse code and that is permitted by FCC regs. If you're contending that the general public is interested in learning Morse code then perhaps we should contact NBC and see if we can get 20 wpm code practice on prime time.

Most hams are so disagreeable that young people don't
want to be bothered. I got my first ticket about 12 years
ago, went to the local club, found mostly retired people who
did not not even want to talk to anyone under 65. So I keep
my ticket and don't use it.

Well. The Winscan program can record the BC and sample
the calls into wave forms withouth using a soundcard
so it should be able to analyze the wave form and decode
the tone.

I will admit that the FCC had an agenda of maintaining or better yet,
reducing its involvement in amateur radio, but that was it's only
"internal" input to the restructuring. The ARRL wasn't the only input
they considered and it was (so they claim) only considered as one of
some 2200 comments received on the NPRM. (Someone ought to use FOIA to
get them and publish them, before the FCC destroys the comments) The
arrogant ARRL is always "surprised" when someone doesn't follow their
suggestions.

Larry,
I too bought a Pro-2050 and decide I didn't like it.The box was thrown
out in the trash by my wife and I returned the scanner anyway,the manager
grumbled that he couldn't resell it without the box but they took it back
anyway,but you bought yours in November so now it is too late to take it
back.

Apparently they do! Go to the options page in Winscan
and put a check where it says Record Output To File.
Soon you'll notice dozens of wav files on your machine
which are time-stamped. I haven't played one back because
I have no sound card, but they're there! It's getting the
sound somehow.

A great singer once wrote 'these times are a changin'.
I think it is wonderful !!! Something needed to happen to keep the average age of the ham operator under 65. Any change is better than no change. 'No change' just gets old and goes away.
People's lives are faster, busier, more complicated than ever. People's attention span is about a day on any hobby. A hobby where it takes months of studying to achieve something is not going to last anywhere in this world today....

I'm not saying I agree with all this but let's face it, it is the way it is. Just think how much time you spend on the internet now that used to be on the airwaves. Everyone is guilty. We just need to deal with it and be happy.

Forget the call sign worries. Be glad to be a ham.

I suspected as much - your comments are pure speculation.
It could be that they simply want to slow the growth of
the Spanish ARS.

Unlike you, Dick, I tend not to speculate. Where is the
Spanish government's officially stated reasons for what
they did? Do they have a web site like the FCC?

It sounds like many old Hams would prefer the Amateur band getting devoured
by commercial wireless so their "good name" will be preseved forever. To
heck to those who would like to enjoy it in a different way.

Why would they need a license? Maybe for patent reasons. Not for any
government requirements as they don't have any rules against
decoding...that I know of.

No, but you don't have the right to put someone down because they don't
share your viewpoint of how things should be.

There's a difference between "liking" someone, and tolerating someone.
No one is suggesting that you give new a 5 WPM extra a big Barney hug,
but he is entitled to be respected as a person in spit of the fact that
he didn't have to endure the 20 WPM hazing ritual.

Anyone who is not willing to accept that things change, and be able to
move on, without sour grapes, and a refusal to show "good will" to
newcomers, IS a stuffed shirt. Again, you have NO right to prejudge
anyone, based simply on their perceived "worthiness" (in your opinion).
If they pass the required FCC tests, they are entitled to the privileges

as hams, as set forth by the FCC.

Bottom line: your opinion is irrelevant. The law is the law.

>
> Neither a license class nor a callsign will make you other than you are.

An open minded individual who is not afraid of change, and who welcomes
the modernization of the ham radio service, and who has little sympathy
for those who refuse to accept it.

>
> Strive to be mediocre!

Seems to have worked well for you.

Come back later when you can get past your opinions and look at the
issues objectively.

Dave

That is what I said,please read the post carefully again and if you
still don't understand call me collect weekday afternoons for some
tutoring.

Realize YOU can change the rules...anytime...all you have to do is
submit your request to the FCC in the proper format and if it makes
sense, they will consider it and issue a public request for comments.
The FCC seldom initiates any changes to the rules, they are all
triggered by requests. There is also the path of appeal. I don't know
the procedure, but I will wager that an appeal will be made on this
restructuring order. I don't think it will go anywhere since there was
plenty of time to comment on the NPRM..but you will have an oportunity
to bitch to them (in a constructive manner)

I rarely talk about my feelings for code on the air unless someone asks.
I have much more to do than to center my conversations around the
"dreaded" code".

The NCT was the result of "whining magpies". Guys like you didn't like
the idea then, so i find it rather curious that you are willing to
accept it now.

I guess it was easy to give someone a NCT knowing full well that you
could hide away on your HF CW segments, and not have to deal with those
"lower class hams". Now it's a little different. There just might be a
bunch of guys running 5 WPM on the extra portion now, and that would
really bore you "elitists". What are you going to do then? Will you
welcome them and try to help them build speed? Or will you shun them,
since they didn't pass the 20 WPM test? If they manage to work their way
up to 20 WPM, will you still think that they are not "real" hams?

Dave

I'm glad you finally admitted that the people are not being dumbed down.
And if the people are not being dumbed down, exactly what is the problem?
Who cares about the requirements as long as the people are not dumbed
down?

I do the same thing. I repair radios quite regularly for the "theory challenged" extra class and other hams. I find it shocking that these guys have such little grasp of RF theory, yet have the cajones to put down otherwise technically capable people simply because they haven't mastered an obsolete skill.

I have talked to a ham who taught code in the army during WWII (that's
somewhere). He had more than a 50% washout rate in his classes. So I
simply do not believe your statement to be true.

I have my 245xlt wired into my input microphone jack on my sound card and it
records wav files fine with Winscan. However, if I disconnect the
microphone connection, just leaving the serial one, Winscan does create wav
files as well. However, the wav file recordings are "blank" with no sound.

31. Hamilton County, TN?

I am seeking radio frequencies for Hamilton County, Tennessee (and channel designations if known) for the Sherriff's office and fire departments. If there is a web page, a URL would be nice, my searching did not indicate one.

Please post and/or e-mail if you know any of these... Thanks!

This is probably true, but coupled with all of the public service we are not doing and all of the help to the neighbor communication we shun because we piss them off with our TVI, we should be able to impress someone that a trained? bunch of nerds are necessary for the public survival. Go any better survival plan?

Message-ID: <386ED582.BC9DE353@southern.edu>
Source record: 97879
Body handling: Binary attachment payload not displayed: sbradley.vcf

It appears that the Florida Highway Patrol has managed to come up with so much money from issuing speeding citations they have upgraded themselves to an 800 mhz astro motorola system from their older VHF four channel radios.

It _appears_ these systems are NOT monitorable, even with a trunktracker.

Has the news media found a solution around this yet? Is there some means to still listen to them?

What I also would like to ask (in case someone knows!) is if either the Orlando, Orange County, or Seminole County trunked systems can monitor FHP by rebroadcasting them over there system so their "officers" can talk to the FHP? I have seen this done in some places.

I am specifically looking for ways to listen to FHP in Seminole, Orange, and some of Lake counties.

E-mail or post here please...

Steven

This FCC action on restructuring kinda proves my point. ANYONE can petition for the FCC to change the rules. Quite a few people have been wanting the code removed and have submitted their wants and desires to the FCC. When the FCC issued the NPRM (Notice of Proposed Rule Making) a couple of years ago, the ARRL was caught in their own egotistical concept of what the hams wanted for rules and tried to stop the no-code tide with lots of counter proposals that required higher speeds of code for the upper classes. Thereby using the code as a discriminator. They did not justify using such a discriminator that offered no real advantage for the upper classes or for the service, so naturally the FCC rejected any such discriminator. Because of the international stuff, they had to have some code, so the opted for the 5 WPM, and the discriminator could be worked out with some technical test questions. I think the ARRL just screwed up in not cooking up some reason why code was a good thing for the service and more code separated the men from the boys.

Why would amateur radio die off now? It is just that someone finally
realized that a higher CW speed meant nothing. If you wish to use it
you still can...

I have a pro 90 scanner. my ? is, is there any mods i can make to this scanner?

How good of scanner is the pro 2006?
What is the best base scanner (best as in most capabilities...with good overall performance)?
Is there that much difference between radio shack and uniden.
Thank you ahead of time for any help or advice you can give me ??

It would be even better if they released a HANDHELD version i.e. a
SUPER '245 with the same features as the '780 but with:-

-AA batteries (no more silly battery packs)
-Control channel trunk tracking (No more entering system freqs, BASE
or OFFSET)
-Wideband coverage with selectable modes and steps
-CTCSS/DCS
-Alphanumeric ID/Freq/Bank labels

I'd have to have one of those! Trunktracker IV/ BC3500XLT anybody?
What do you think Rich?

JohnC.

No, but I would suggest that he know and be able to do mathematics
without thought (or calculator) to make him a 'real' engineer. Math
is the fundamental "mode" of all the sciences; it transcends language
barriers -- any two engineers any where in the world can communicate
their engineering ideas via math.

Do you see an analogy?

Message-ID: <s6skbasl5k267@corp.supernews.com>
Source record: 97894
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I received a used XLT200, and I would like to know how to program the unit.

Things that I would like to know:
1) How to program a manual scanning range (low-to-high freq range)
2) How to program a new stored channel.
3) How to select and scan channels.
4) What does the "L/O" button do, and how to enable/disable the function.
5) How to manually listen to one frequency.

If anyone has a XLT200 user's manual - I would appreciate a copy. Please
respond to mailto:shoe.DELETE.THIS@bresnanlink.net (remove the
".DELETE.THIS") -I'll pay for postage if it's a "snail mail" copy.

Thanks!

Jim et al ...

It is pretty clear from a careful reading of the R&O that the ONE AND
ONLY reason given by the FCC for keeping ANY code test at all is
that we have a non-waiverable obligation under the ITU Radio Regulations
to have SOME code test for access to bands below 30 MHz.

Absent that, I don't think we'd have ANY code test in the R&O since
none is necessary except to satisfy an outdated treaty obligation which
will most likely be removed in a couple of years at the next WRC after
the upcoming one (it's on the agenda for that WRC).

THEN the FCC will be able to say, "Look, we've had a NCT for nearly
15 years and 5 wpm for full access to HF for a couple of years now and
the world hasn't fallen apart. There is no longer a treaty obligation,
which
was the ONLY reason for keeping even a 5 wpm code test these last
couple of years, so we hereby eliminate Element 1 (the code test) and all
references thereto in our Rules."

Until then, we've made tremendous progress.

On the other hand...I have been an amateur advanced class op for about 15 years now...and I can for one say that this should give some of the young blood some incinitive to really get their licences and get on the air. I haven't really worked cw for years now, but I can forsee an upsurge in interest in the mode, since it will become somewhat an interest in those that no longer view upgrading to higher cw speeds to get on hf. As for me...I am going to get some study literature and try for my extra licence even though it won't have the prestige (anyone for an friendly argument here?) it once did.
The times they are a changin'.....

Er, pardon me ... I think you meant the "non-SSB/SSTV digital bands." I
am not interested in the code, but I expect to soon be doing some
interesting
digital stuff in what your erroneously refer to as "the code sub-bands."

It's called progress ... live with it.

Lithium primary cells are a different chemistry and lower voltage than
the Lithium rechargeables. They start out around 1.65 volts per cell,
not TOO much for a 1.5 volt application. They last a LOT longer than nay
other battery I've tried, and are especially good in high current
applications such as digital cameras. RS wants too much for everything.
The same two-pack of batteries costs $4.17 at Home depot.

Incidentally, in an R2 or Q7 I get a few days out of lithium cells that
won't run my camera any more.

> below 30 Mhz.

Actually, the last part of that is untrue. The ITU Treaty/Radio Regulations
are
completely silent on any speed requirement. The FCC *could* have set a
1 word per fortnight code speed requirement and been perfectly within the
Radio Regulations/Treaty Requirement. But since 5 wpm was the lowest
existing code test speed and has already been accepted by CEPT for granting
US ops full HF privs in CEPT countries, they went with 5 wpm for now.

If you read the R&O carefully, the ITU Treaty/Radio Regulations are the
ONLY reason cited by the FCC for keeping ANY code test.

>There are several nations who are looking to drop the code
> requirement altogether (the US is NOT one). The treaty is reviewed every
> few years and you may see the code requirements loosened further
> (eliminated), if and when the international requirement is dropped
> (...personally, I'd be suprised to see it dropped real soon... maybe 5-6
> years away)

Consideration of S25.5 ... the section of the ITU Treaty/Radio Regulations
which required Morse tests (at no specified speed) for licenses granting
access to the bands below 30 MHz is on the agenda for the next after the
upcoming WRC. There is a great deal of international support for
eliminating
the Morse requirement from the treaty entirely and it is expected that it
will
be eliminated upon consideration at the WRC

63. Re: Amateur Restructuring Announcement - FCC screws Ham Radio!

Newsgroup: rec.radio.scanner
Date: 2000-01-01 00:00:00 UTC
From: Marv Luse <mwluse@dimensional.com>
Message-ID: <386E5AB4.B4C11DFC@dimensional.com>
Source record: 97907
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Hey guys,

This rather worthless and futile thread is being cross-posted to the
following groups:

rec.radio.amateur.antenna, rec.radio.amateur.equipment,
rec.radio.amateur.misc,
rec.radio.amateur.policy, rec.radio.cb, rec.radio.scanner,
rec.radio.shortwave

Could we possibly confine it to the policy and misc groups? All you
have to do is edit the address list when you reply and delete the
inappropriate groups. After awhile this crap should then disappear from
antennas, equipment, etc.

Thanks and 73,

Marv

"We" are, huh? And everyone who holds a differing opinion is an "old fart". You are just as I supposed you to be.

> As far as I'm concerned, ham radio is much better off without guys that
> cannot accept people for who they are and not what class of license > that they hold.

Dave, there is no moral nor any legal requirement for me to accept anyone for who they are or what they are. I never had any problem accepting anyone because of amateur radio license class. I'm not, on the other hand, obligated to like someone.

I sincerely hope that this FCC action causes a lot of old
> stuffed shirts to sell all their equipment and throw in the towel. More
> room for the rest of us, that truly want to see ham radio progress, and
> who don't have a close minded, bigoted, and predjudicial attitude.

Again, anyone who holds a differing opinion from yours is a stuffed shirt who should leave amateur radio and leave room for "us"--those who "don't have a close minded, bigoted and predjudicial (sic) attitude". You are just as I supposed you to be.

Neither a license class nor a callsign will make you other than you are.

Strive to be mediocre!

> my once active scanner.

Speaking as a guy who may not know what he's talking about, I kind of suspect that there will be a high-end-consumer digital scanner by the end of 2000, maybe even a little sooner. The major hurdles are probably more legal than technical, and I think that for all our sakes we must always make a clear distincintion between simple digital encoding and actual _encrypted_ communications.

This topic might crystalize the debate about whether the public can expect access to public-safety (hmm) and law-enforcement communications. It's hard to say how that would go, but I honestly think that the police and fire officials would have a hard time convincing the general public that they have some pressing and immediate need to operate in secrecy when they have never had such an absolute need in the past. But they may not have to convince anyone if certain parties can get a law passed before anyone knows what's going on.

The ironic thing is that real big-time criminals and drug folks can probably obtain properly programmed actual digital radios if they really want them. Or they can bribe the appropriate insiders to inform them like criminals have been doing since the beginning of time. In other words, they're not going to care if they're illegally monitoring communcations. Unless someone can show me that signifigant numbers of common criminals are using scanners to evade or attack police officers I will remain skeptical of the value of and need for fully private police communications.

That said, I'm fairly optimistic. It gives me something to look forward to. :-)

How do you avoid crippling your thumb when programming multiple
frequencies? I always uses software when adding more than 1 or 2
channels if I'm at home where the computer and cable are.

I'm considering getting one. Any comments on this radio ?
Or should I wait for the BC-780XLT to come out ?
Anyone know if the BC-780 will be able to trunktrack multiple trunked systems at the same time, and or convential channel and trunked systems at the same time like the PRO-92 claims it does ?
TIA for any answers or comments.

No, it means I pick and choose on what I spend my precious free time. I personally would not spend 100hrs handbuilding ham gear which does 1/1,000th the capability of a store-bought $700 radio is a big waste of time in this day and age. Yet I respect those who find such endeavor rewarding. To make tinkering a prime directive of HRS, however, is turning a blind eye to reality.

> Actually, it looks like the price of good used ham gear
> just took a steep upswing.

And the price of new ham gear just took a steep down swing.

Time to clear out some extra radios.
I have the following for sale.
Everything was purchased new by me.
I will supply jpegs if requested.

OPTOELECTRONICS OPTOCOM
Virtually brand new. Radio is not for me as my local system is Johnson LTR MultiNet.
$325.00 I ship UPS to continental US.

RS PRO2005 with OS456 Lite board.
Only a couple of mods,
a diode is missing,
and the power supply has been removed. I have the power supply and will of course include it should you wish to re-install it. Radio runs much cooler with a wall adapter instead of the internal power supply.
Display is GOOD, not perfect, but with the OS456 Lite board, the display is not "needed."
$325.00 I ship UPS to continental US.

UNIDEN BC760XLT with CTCSS board and an AUTOMATED INDUSTRIAL ELECTRONICS TF2 tone finder. The TF2 tone finder is housed in a 760XLT case and piggy-backed on top of the BC760XLT. This is a slick unit for finding tones.
$300.00 I ship UPS to continental US.

ADI AT200 2 meter HT.
Simple keypad mod for wide RX and TX.
$120.00 I ship UPS to continental US.

Thanks,
Greg

73. Pro 94 question

Newsgroup: rec.radio.scanner
Date: 2000-01-01 00:00:00 UTC
From: Mike <nospam@all.org>
Message-ID: <37ps6s89chporjemkg5upnl2qpptdj8oj6@4ax.com>
Source record: 97917

When trunking any bank other than bank 1, the display readout for
the channel number will read as the channel number in that
particular bank, vise the actual channel number. For instance, if
the scanner has stopped on the second programmed freq in bank 2, the
readout is "2 ch" and not "52 ch" (bank 2 on the Pro 94 is for
channels 51-100) or if the scanner has stopped on the
fifth freq programmed into bank 4, the readout is " 5 ch" and not
"155 ch" (Bank 4 is channels 151-200), and so forth.
Rather convoluted I know, but is the best description I can give.
Is this "operator error" or is everything as it should be?
Thanks in advance for the help.

If you have the room, choose a BCT7 instead. It has lots more features and more capability. No cellular. I had one, but now have a BCT12 because I had no where to mount the 7. The 12 is entertaining and works well, but you're generally restricted to police, news, and DOT. It will pick up some nearby cellphones inadvertently, but not consistently. Either one is worth having.

What is the point of having Amateur Radio if the entrance hurdle keeps
getting reduced further and further.

At this rate, it could become like FRS. Just buy the radio. How does that
jibe with the long and illustrious history that hams have had?

Radio-Shack Realistic PRO-37 Scanner For Sale.

It's a Top of the Line Portable Scanner that covers UHF and VHF Bands from 30-54 MHz and 108-174 MHz and 380-512 MHz and Cellular 806-960 MHz.

You can program 200 channels into it, and it has direct-entry of frequencies.

It can scan 10 groups of frequencies, one or all, as you wish, or you can enter the frequency manually if you prefer, or choose the frequency you want to hear from the 200 you have entered into it.

It measures 6.5 inches high by 2.75 inches wide by 1.75 inches deep.

It is in As New Perfect Condition, no scratches, and was used only one year.

$199.00 plus shipping.

Yes, the FRS radios are really state-of-the-art, and being designed for a particularly small portion of the radio spectrum, they can be optimized for it. That explains the remarkable range they get out of them also. Used to be, you needed at least 2-Watts on UHF to go two miles, FRS is doing it with 1/2 Watt!

If not knowing Morse code can dumb a person down, it must affect either
his IQ or knowledge. Just think how brilliant Einstein would have been
if only he had known Morse code.

OTOH, it seems logical to me that dropping the Morse code requirement
to 5wpm will have absolutely no effect on anybody's IQ or knowledge,
i.e. no dumbing down is possible because of it.

I have a BRAND NEW Radio Shack PRO-2050 base Trunk Tracker (tracks Motorola systems) scanner for sale. I bought this in November, and found that I do not use it. I was going to return it to Radio Shack, but my 2 year old daughter tore up the box. I have the radio itself, the power supply and manual and like I said this is BRAND NEW. I got it on sale for $179.99, and am asking $150 INCLUDING SHIPPING. If interested, please email me!
Thanks!

LARRY :-)

What illustrious history? A bunch of old farts talking mumbo jumbo about
their ailments and 5X9 and Q something something etc., etc.
Hardly qualfies as illustrious. When was the last time an amateur advanced
the electronic state of the art through amateur radio? I do believe it was
Art Collins back in the 50s perfecting SSB. For the most part from what I
can tell all the exaulted old timers do is open the Kenwood, Icom or Yeasu
box and start talking. Illustrious history my foot.

Hello,
I have just set up again for receiving MDTs (it has been awhile).
I have not been able to find any signals on 855.4625 the Rejis mdt
channel for St. Louis , Mo. (I think).
Does anyone know if they are currently using that freq?
Or what freq they are using?
Or any freqs I can find mdt signals in the St. Louis area.
The only one I can find any signals on is 855.8375 which I think is
Ardis a commercial
business type signal.
I would be very greatful for any help.
Thank you!
Jeff

>1) Who said "broadcasts" of the type W1AW is doing are not legal? Not
>the FCC regs.

According to 46CFR97.3:
"(10) Broadcasting. Transmissions intended for reception by the general public, either direct or relayed."

Where this gets interesting is in determining "who" is "general public". I contend that simply calling "QST de ..." does not get you off the hook - that "all hams" is a pretty weak distinction from "general public".

As for the 5wpm practice, this surely is aimed at non-hams (except for the no-code techs, all hams have 5wpm under their belt already).

Not that I care either way, and I actually find the practice very helpful. I just think its a case of bending the rules to suit one's own agenda.

Something I haven't heard in the pro/con is where was ham radio going before the restructuring? In the toilet, that's where. The number of new hams is running 10% of the dying ones and the wireless community is demanding a lot more bandwidth and of course, are looking at the ham bands for their finacial survival. There are 100 million potential wireless users and diminishing hams at about 400,000 now and potential or 100,000 by 2005. There will be no ham radio in 2006 unless this gets turned around. Face it people need internet on their wrist far more than they need to pass signal reports with Tibet.

I saw the "FreeTracker is dead" page. That is a shame. It is (was) an excellent program. I got out of scanning a while back, and don't have the latest (and I guess last) version that was available before it died. Does anyone have it? Could you send it to me?

bcsw@home.com

I have seen "real hams" that don't know anything about radios and how they work. We a "real ham" that give signal reports on a 2M repeater. This same "real ham" can't understand why people can't hear him off the side of his beams. CW was originally meant as a means for communication between machines. They should have left it that way.

"Advance amateur radio's state of the art" - of all the laughably outdated directives I was forced to memorize, this one takes the cake.

This may be true in the old, old days when the typical ham build his/her own rig out of cereral boxes and coat hangers. I hold a BS in Mechanical Engineering and a MS in Computer Science, and I just got my first ham ticket. My plan for advancing the state of the art involves stopping by Texas Towers and picking up a brand new Yaesu FT-847.

Wake up and smell the surface mount device, old timer.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

| https://haifoss.fcc.gov/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
| http://ednet.wvsc.edu/~fcc

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while supplies last! In addition, the newest version, Scannerbase XE, is available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

PERCON PERCON POLICE SCAN

125. Will there ever be a digital scanner?

Newsgroup: rec.radio.scanner
Date: 2000-01-01 00:00:00 UTC
From: paul and jacki <jacki2@gwis.com>
Message-ID: <386DBA6E.1C26@gwis.com>
Source record: 97969

With all of these cities going digital (including my hometown of Akron, Ohio), the future of scanning seems bleak at best. Is it just a matter of time before technology develops a scanner capable of receiving digital signals? Just wondering and hoping as I look at all the dust on my once active scanner.

I resemble your remarks about wondering from hobby to hobby. Tell me again why I should be kept out? You're saying only those for whom Amateur Radio is the ONLY passion should be allowed in?

I happen to feel that life is too short not to make the most of it. You sir, apparently think I'm a lesser human being because my diverse interests. So you want me to proove my dedication by jumping through a few firey hoops? No thanks. I don't consider circus acts a useful skill, neither is 20wpm.

About your "job to job, wife to wife"... Get off yer moral highhorse and smell your own horse farts at eye level.

Since you brought the wife into this:
It took a lot of persuasion on my part to convince my wife to learn 5wpm with me and try for her Novice ticket. She is studying diligently for the written exam with zero technical background. She barely passed her college graduation math requirement a couple of yrs ago. Her engineer husband helps out as much as possible, but she admits some sections are just way too difficult for her so she may have to memorize those questions.

We both welcome the FCC announcement with excitement, as it may potentially help ease her uphill battle.

Some of you might commend me for introducing another person into the Ham world. Others, as plainly evident in these discussion, will be openly scornful of my attempt to dillute your supposed exclusive elite ranks with a techno-idiot. Ask yourself, which side are you on?

Wrong. The test included a sworn statment under penalty of
law that the signtory had administered the required code
test.

But let it lie, hell it doesn't matter anyway. Its all just
more of your class envy, which you can cure soon.

The should have completely done away with CW and eliminated any requirement.
It is an outdated mode of communication that is one step above smoke
signals!!!

While I have no idea of the power output of the federal supply I'll
pass along this info. 10 watts a tube is about worthless. The 90 watt
6 outllet whelen pack I had looks good and the new 8 outlett 150 watt
really looks nice. I can see the difference between 15 and 18.75
watts. FYI if your looking to buy you might want to compare.

And you believe the small booklet study guides prepares the potential driver better than the test method used by the FCC - that it covers all the information that the driver needs to operate a vehicle? Those people are driving a vehicle that has the potential to kill people.

However, my main point, Dick, is that the ham license test is not a final exam that proves your knowledge, it is an entrance exam into the world of hobby radio. You not supposed to know everything when you complete those tests - your supposed to learn about this hobby radio after you take the test.

That was the intent of the FCC when designing those tests, and those tests serve that purpose well.

It might be possible to send the audio signal
from your scanner to your computer sound card
and then use a software to do a live
translation from a .WAV digital noise to
a .WAV human audio sound.

It would extend the life of my pro2006 for sure.

Yet another fine example of the hams waiting for someone else to do their dirty work. This item isn't new and if 500,000 hams had written (if that many can write in complete sentences) the FCC, this would have been put to bed long ago. All of this bickering is the exact reason I no longer participate in amateur communications. 30 years of enjoyment, but no more. I said it before and I'll say it again, the hams are their own worst enemy.

I put this question to a major scanner manafacture recently and they said
that there will not be a digital scanner because they would never get a
license to make one from the GOv, this is due to the fact that with anolouge
they can justify it because of ham/broadcast/etc etc but all digital comms
are currently private ones and thus not for listening

in the UK anyway

Misinformed as usual, Dick. The code exam could be administered
by a general or higher and the written exam could be administered
by anyone who was at least 21 years old. The written exam could be
administered on a different date at a different location by a
different person. Please get your facts straight before accusing
someone of illegal actions.

The FCC wisely did not do away with CW. It still can be used on any
HF ham frequency. It is still a useful mode for a lot of hams. Why
do you want to take that away? Doesn't that make you just as bad
as someone who wants to force you to learn Morse code? What
is wrong with live and let live?

The FCC should have eliminated code entirely and made it an elective mode.
Code is as outdated as smoke signals!! They just don't get it!!

After reading the multitude of post regarding this issue, this is my opinion of the whole affair.

There will be a top heavy number of Extra Class Operators. (Just took the test after a weeks worth of intermentant study and passed with an 80 %).

There will be a fight for 1x2, 2x4, 4x6 or what ever the "designer" call sign pattern is in vogue at the moment. Why you might ask? Because this is America and being one means you must possess the "look and feel" of having made it in life. If this was not the case then vehicle leasing programs so the average Joe or Jill could buy an overpriced SUV or luxary car would unnnecessary.

There will be eventually restructuring of band assignments, and CW, Digital and other forms of non-voice communications will be squeezed into very small bandwidth. Maybe CW will die off, which will make the dye-in-the-wool anti-CW supports very happy.

One CB-derived person commented on other Hams picked on him and his kind for being bad operators therefore not welcomed into Ham Radio ranks. All I know is 2 meters and 7.258 MHz which in the 1970s sounded ham oriented now sound similar to the "trucker only" outband channels on CB. Especially 7.258 MHz during the day, I tried using MIDCARS this summer for the first time on a mobile. I was not welcomed during the afternoon because of not driving an 18 wheeler, sure they are a few old timers on MIDCARS from my youthful days in the 70's but these guys are a minority now.

The bottom line is this Ham radio will grow but, the technical experts are not going to come in droves. Computers not Radio are what the technical experts crave these days and you take no tests (other than for you BSxxin college). Remember money talks and BS walks axiom. The logic behind this statement, as supported by both the FCC and ARRL, is flawed. Ham Radio is a consumer oriented hobby bottom line, just visit your neighborhood Ham store. There is very little "home brew" rigs for sale, and I do not mean kit built homebrew either.

Lets face it everyone involved in this decision has a hidden agenda or financially motivated goal. The facts to support the changes were created to meet the situation at hand. The die is cast and we are about to go into production, so hop on the bus and go for the ride. What is certain is things (or is it thangs) are are going to change.

So if one or two of us with amateur licences were to request a variation
on our validation documents, so that we could do some research with
digital communications, would this help give receiver/scanner
manufacturers a 'foot in the door' ??

Howdy:

I am very concerned that I haven't heard or read of any discussion regarding call sign formats for amateurs licensed after RESTRUCTURING.

I propose something like a three letter prefix followed by a number group----for instance, KOP followed by the last four digits of their social security number or zip code perhaps.

Seriously, this historic change to amateur licensing should not ignore a subsequent change to appear in manner of call sign issuance. I sincerely feel that those amateurs who made it the hard/old/traditional... way should enjoy that fact---at least for the duration of their amateur career, by having their call sign identifier separate from those of future amateurs for the sake of tradition. Honestly, I think a conventional call sign with a three letter prefix would serve this function nicely.

Sincerely,

155. For Sale: Radio Shack Pro 2036

I have for sale a Radio Shack Pro 2036 base scanner. This is the same model as the Uniden 890XLT. Radio has the CTCSS tone board installed. The Pro 2036 has 200 memories, autostore, autosort, delay, turboscan, weather alert, rotary tuner, 10 priority channels, and adjustable backlit display. Includes manual, antenna, and AC adapter.

Radio is in excellent shape, it has a date code of 10A5 so full coverage can be restored.

Asking $140 and that includes shipping Priority Mail.

Thanks,

D. Schopp

I'll try and not get emotional here now that I've had a couple days to
calm down.How is CW outdated? I just don't get what you mean by
that,especially when compared to AM,FM,and SSB in that order.
The first on the scene doesn't have to be the first to become
obsolete.
What modes do you think are not outdated?

Nope, not for a moment, Volfy. I've said it before, I have
never believed that it should be any harder than necessary
for anyone who wanted to, to become a ham.

I am officially on record as willing expose a large part of
the amateur spectrum to the forces of nonsense in order to
support that ideal. But not all of the ham radio spectrum,
as has just been done by FCC.
I sure hope your wife doesn't have problems tolerating
trash, since its almost a certainty we'll get a large
increase in that sort of thing within the ARS.

Talk to someone who taught code in the navy or somewhere and they will
tell you that ALL of their students made it to 20 WPM although some had
to take the 2 week course twice.
Many of the study materials are poor,like the ARRLs or W5YI,I used
these and was getting nowhere the got "Jerry Ziliaks high-speed code
course"and went to 23WPM before I knew what happened.
I must admit I sure hated it until I could actually follow a
conversation.
Many people are too lazy,too set in their ways or just don't want HF
PRIVLEGES very much.

There's an international treaty that makes that unfeasible at the moment.. 5 words per minute is the INTERNATIONAL minimum code speed for Amateur Radio below 30 Mhz. There are several nations who are looking to drop the code requirement altogether (the US is NOT one). The treaty is reviewed every few years and you may see the code requirements loosened further (eliminated), if and when the international requirement is dropped (...personally, I'd be suprised to see it dropped real soon... maybe 5-6 years away)

We all walk at different speeds; and some can't walk at all, so if one person wants to walk at 20 steps per minute and some only 5.They are both walking; does one add or subtract from the others ability?

The ones who can't walk have a place in the world too. They can do what they CAN do

It is not about technical skills---its not about the Me Mentality (I did it this way so all should do it this way). It is about change! The numbers of new hams have stagnated
to the point where the hobby is in jeopardy of losing band space (use it or lose it)

It is a shame that we can't be big enough to quit quarreling about trivial stuff and do
what's best for the hobby.

The above views are my own. It works for all aspects of life
Do what you can.

What I said was, the affidavit signatory was required to
state that he administered the code test. You said that he
instead called the other ham who "knew" that you could copy
the code, and clearly he would have signed the affidavit on
that basis, under your story (I know, you're sticking to
it). A violation that would have been acted upon by the FCC
at that time had it come to their attention. I'm sure they'd
have preferred not to know.
Counteraccusations do not produce accuracy, just more
attempts at muddy water.

Same old chicken little routine seen when the no-code license started.

Y2K and now the FCC restructuring of ham radio.

Radio Shack sell packs of two AA lithium batteries. These are not rechargeable, claim to have 5 times the life of alkalines, are $6.99 /pack, are nominally 1.5v and work fine in my GPS, though I've never invested in 6 for a scanner. (Happy with RS High Power NiCads!)
I thought so too..... but,

Show me a webpage where they have some for sale. I have been looking myself since I just found out that each battery would be 3.6v compared to the regular 1.5 volts of a alkaline AA.

Could you imagine putting 6 batteries in a Pro-43?
3.6volts times 6 batteries = 21.6 volts. Can you say meltdown?

Spain reinstituted a 12WPM code test after dropping it
completely for years, having found that it drew undesirables
to the ARS in droves.

SO... tell me... where was the ARRL? Too busy running a publishing
house?

I'm sorry, I have not heard this issue discussed. You are somewhat
correct, I wasn't aware of what was happening though I was not 'holed
up' in the shack as you suggest but working in a 'holed up' shack
overseas.
Really now, how difficult is it to use the any of the blocks of the
three letter call prefixes available for the US instead of two (AAA-ALZ,
KAA-KZZ, NAA-NZZ or WAA-WZZ)---that's a simply administrative duty for
the FCC to implement---what, their computers can't handle it? No rule
changes required.

What an idiot. The first ham called the second ham to get him to sign off on the Morse code portion of the exam since he didn't have any way of sending 13wpm for an exam. The second ham had given me the Morse code exam six weeks before using a 78rpm record. Do you really think I had forgotten Morse code in six weeks? Presentday certificates are good for a year.

Dick:

International call sign allocations for the US consists of the following
blocks: AAA-ALZ, KAA-KZZ, NAA-NZZ and WAA-WZZ with the addition of

number and letter suffixes as required. Like I wrote in my post, for those in the majority who may wish for it the new call sign blocks can consist of a three letter prefix with the conventional call sign for example; AAA2AD or ABD3FYT. This capability has been in the system for decades---almost one hundered years. I'm surprised that as a ham for the duration you stated you didn't know this basic fact. BTW, your 'N' call is not old---it is new! My 'WB' call predates that by a goodly margin---similarly, an orginal holder of a 'K' call predates mine. Unfortunately, that was in the good old days before the FCC in their wisdom destroyed yet another important facet in amateur radio---sense in call sign allocations. I thought then as I do now that there is a bit of comfort in knowing the relative age and experience of the operator at the other end of the communications circuit besides providing a sense of continuity between the past and present.

I think the idea of a three letter prefix quite applicable. The FCC recognized the holders of the First Class Radiotelephone by issuing a special certificate to them when the deleted that license class in favor of the General Radiotelephone Operators Certificate. I think a similar situation is warranted for hams; as a generalization, elder and more experienced hams can help the newer and a special call sign to help distinguish the two groups/generations is indeed a useful tool.

That fact that achievement is institutionalized is an important and useful fact of life; for you to destroy this fact speaks interestingly of your attitude---quite possibly of your behaviour as well. If anything, less structuring will just increase the likelyhood of ghettoizing the ham experience---YEA... HOW BOUT IT BREAKER BREAK 19 C'MON DUDY DANDY!

You are entitled to your choice... maybe you can get the first 0 call in the new block; NNN0BK for instance or maybe AAA0BK strikes your fancy.

Sincerely,

I'm confident there will be digital scanners, maybe they already have them. The issue will be, will we have access to them, or be allowed to use them?

I read where Canada is going to require people to have a license to use a digital scanner, which means probably not everyone will be able to qualify for a license. I also read that Motorola will soon have a digital scanner, but it will be very expensive, in the area of $4,000.00! It will have a $100.00 programming charge, (you won't be able to alter it), and it will be programmed for a particular service only, and a $50.00 /year maintenance contract. So in this case, not everyone will be able to afford one, or want one. Funny thing is, the "bad guy" they're so worried about getting his hands on one, will be the most likely to afford it! Go figure? I think Motorola is going to be marketing this to special agencies, like MEP, REACT, Red Cross, etc.

However, where there is money, and a market, there is product, so we may see a day when someone like Uniden, AOR, or GRE, show up with a digital scanner for the rest of us! With our luck, all the systems will then go with encryption, as some already have.

Quit yer complaining, CRYBABIES! The world is changing. Get used to it. We just entered the 21st century, and Morse code is about as relevant today as buggy whips and smoke signals. The choice was to either lessen the Morse requirements or watch the flow of new HF licensees slow to a trickle and the bands be taken over by commercial interests. Fortunately, the FCC chose the former, rather than the latter. Watch for the FCC to move quickly to abolish the Morse requirement entirely, once the ITU requirement is removed.

That's the way it is. Deal with it. If you don't like it, turn in your licenses and get the hell off the bands so the rest of us can enjoy the hobby without the likes of you. Come to think of it, this would be the preferred action for you to take. This way, we could make ham radio an enjoyable hobby once again, without having to listen to your endless babbling about the weather, your health ailments, and how much better the hobby was "back when CW was required and I had to travel 400 miles through a raging snowstorm to the nearest FCC office to take my license test..." Blah, blah, blah. Nobody cares. Those of us who wish to modernize amateur radio so that it may continue into the next century have won the war. You lost. Get over it.

Either get with the program or get out of the way. We're sick of your whining.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS

(Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram and | additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or

anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago

chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want
to eat or drink, bring it with you, as well as your BBQ or
six pack.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram and | additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,

available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and MCA-204 Receiver Multicoupler

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels.

We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory

channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative

test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks.

Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics).

The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has

already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high

pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but

very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-

2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The

most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken

around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet

available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are

provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-

channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are

unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit

diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram and | additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated December 24, 1999 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

JANUARY 2000

Jan 2 (Sun): Wheaton, IL - Giant Computer Show & Sale (see | below). DuPage County Fairgrounds, County Farm Rd. & Man- | chester Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Jan 9 (Sun): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Jan 23 (Sun): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite. |

Jan 23 (Sun): Cicero, IL - Wheaton Community Radio Amateurs Mid Winter Hamfest - 2000 at the Chicago Motor Speedway. 3301 S. Laramie, Cicero. Located between Central and Cicero, between the Ike and the Stevenson. Tickets $5.00 in advance with 4 stubs. Free parking. Talk in on 145.39 (- | .600) 107.2 or 103.4 Hz PL and 444.475 (+5.0) 114.8 Hz PL. Info: www.w9ccu.org or send email to hamfest2k@hotmail.com.

Jan 23 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2.

Jan 30 (Sun): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

FEBRUARY 2000 |

Feb 26 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |

or $5 with discount coupon available at WebSite. |

Feb 27 (Sun): Glen Ellyn, IL - Computer Central Show (see |
below). College of Dupage. Corner of Park Blvd. & College |
Rd. 9:30 AM - 3 PM. Admission $6, children $2. |

MARCH 2000

March 19 (Sun): Sterling, IL - Sterling-Rock Falls ARS.
info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL
61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

Mar 25 (Sat): Grayslake, IL - Computer Country Expo (see |
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- |
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |
or $5 with discount coupon available at WebSite. |

March 26 (Sun): Grayslake, IL - Lake County Fairgrounds.
North Shore Radio Club. http://www.ns9rc.org. ALL INDOOR,
Radio, Electronic and Computer Swapfest V.E. Testing 9AM to
Noon, Door Prize Drawing Every Hour, Admission $6 at the
gate / $5 in Advance. Door Open at 8 AM. Set-up at 6AM.
Free Parking. Cafeteria Open. Talk-in Simplex 146.52 &
NS9RC Repeater 147.345 +.600. For NS9RCfest Information
Call (847) 291-4160 until 10 PM. Info: Jacob Fishman,
KF9ZF, PO Box 1066, Highland Park, IL 60035. Phone: 847-
291-4160, Email: kf9zf@lightwriters.com

APRIL 2000

Apr 15 (Sun): Grayslake, IL - Computer Country Expo (see |
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- |
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |
or $5 with discount coupon available at WebSite. |

Apr 29 (Sat): Stickney, IL - DuPage ARC.

nut Avenue, Woodridge, IL 60517. Phone: 630-985-9256.
Email: DARCHamfest@aol.com

Apr 30 (Sun): Arthur, IL - Moultrie ARK. Info: Ralph Zan-
cha, WC9V, PO Box 55, Lovington, IL 61937. Phone: 217-873-
5287. Email: rzancha@one-eleven.net

Apr 30 (Sun): Glen Ellyn, IL - Computer Central Show (see |
below). College of Dupage. Corner of Park Blvd. & College |
Rd. 9:30 AM - 3 PM. Admission $6, children $2.

MAY 2000 |

May 20 (Sat): Grayslake, IL - Computer Country Expo (see |
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- |
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |
or $5 with discount coupon available at WebSite.

May 28 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2. |

JUNE 2000

Jun 4 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: AL Erbrederis, tel. 1-815-498-9675, 262 Easy St., Somanauk IL.60552. ERB.N9PIB@juno.com. http://www.qsl.net/w9mks. E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 11 (Sun): Wheaton, IL - Six Meter Club of Chicago. http://cyberconnect.com/orion/smcc.html. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 630-963-4922 or 708-442-4961 . Email: wa9rij@mc.net

Jun 24 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite.

Jun 25 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2. |

JULY 2000

Jul 9 (Sun): Peotone, IL - Kankakee Area Radio Society, http://www.w9az.com. Info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. Tel: 815-939-7548. Email: k9nr@juno.com

Jul 15 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite. |

Jul 23 (Sun): Sugar Grove, IL - Fox River Radio League. Waubonsee Community College. http://www.frrl.org/hamfest.html Info: Maurice Schietecatte, W9CEO, 813 Cindy Lane, Sandwich, IL 60548. Tel: 815-786-2860. Email: w9ceo@arrl.net (good, small to midsized ham-fest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2000

Aug 12 (Sat): Quincy, IL - Western Illinois ARC. http://www.qsl.net/w9awe. Info: Jim Funk, N9JF, PO Box 3132, Quincy, IL 62305-3132. Tel: 217-336-4191 . Email:

jfunk@adams.net

Aug 13 (Sun): Peotone, IL - 66th Annual Hamfesters Hamfest. | Will County Fairgrounds. 45 mintues from Downtown Chicago, | take I-57 to Peotone Exut 327 (East). 35 acres of free | parking. 14,200 square feet of exhibits open at 8 AM. Flea | market open at 6 AM to 3 PM. No additional charge for flea | market space. Rain or shine -six covered pavilions for Flea | Market. Tickets are $4.00 in advance with double stub, | $5.00 at gate with single stub. Children under 12 free. | Advance ticket sales and information: SASE and check by July | 25th, Christine Mack, PO Box 2161, Oak Park, IL 60303. tel. | 708-358-1786, email: christine1@mediaone.net. Talk in on | 146.52 simplex and 146.64-(107.2) Stars Repeater |

Aug 19 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite. |

Aug 27 (Sun): Danville, IL - Vermilion County ARA. Info: Gary Denison, KA9SKS, 14704 East 2750 North Road, Danville, IL 61834-5610. Tel: 217-759-7389 . Email: gdenison@danville.net

Aug 27 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2.

SEPTEMBER 2000 |

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite. |

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. http://www.w9uvi.org. Info: Jim Williams, N9HHU, PO Box 3508, Peoria, IL 61612-3508. Tel: 309-692-3378. Email: jimn9hhu@juno.com

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best ham-fest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000 |

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2. |

NOVEMBER 2000

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite.

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see | below). College of Dupage. Corner of Park Blvd. & College | Rd. 9:30 AM - 3 PM. Admission $6, children $2. |

DECEMBER 2000

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see | below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- | videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, | or $5 with discount coupon available at WebSite.

COMPUTER SHOW NOTES |

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

I'll add my 2 cents on this. I know a technician who took 2 weeks to get
13
WPM and got his general. I also know a technician who has been trying
to get 13 WPM for a year and could run circles around the general when
it comes to understanding the technical aspects of radio. My point is that
some people have no problems learning code while for others it may be a
difficult or almost impossible task.

It's like learning to play a musical instrument. Some people have the gift,
some do not. Code in no way determines who will or will not be a good
amateur operator. Code probably prevents people who would otherwise make
an excellent operator from getting into the hobby or upgrading.

I've gotta have one!

I've been going back and forth about picking up another scanner, but I wanted something with alpha tags, better trunking features and wider frequency coverage than the radios I have now. The 780 seems to have all that and more. I can't wait!

I still believe that emergency services are what hams
will be able to provide that the commercial world cannot and
will not. The local 911 system is very fragile, and highly
political too. Given any kind of problem, it would be gone
in a flash.

My wife, as a public health nurse, went down to Tarboro,
NC after Princeille flooded out. The state had NO way for
their employees to communicate back home except through

whatever commercial phone service they could get. The
nurses were not told where they were going, where they would
be staying, or even when they would come back. After they
got dropped off it was up to them to try to notify their
family where they were....if they could. As one person told
me, they don't know where they are going and when they get
there there are no communications.
Here is where ham radio could make a big difference, at
least in theory. Volunteers could emerge from their homes
with their transmitters and help out a lot in such
circumstances. Cell phones were useless for 1 week after
the flooding....overloaded and/or shut down. Only about 8
days after the disaster did AT&T bring in a large dish and
establish free phone service for the 2,300 living in a high
school gym with no cash or access to money. Then my wife
could phone home, but only for 3 minutes incidently.
However, locally I guess the hams are under contract to
provide for backup for 911, not to relieve suffering of
people who cannot found their spouses for 8 days after a
disaster, and had to assume they were dead while everyone
told them, "Maybe they are in another shelter."

Radio-Shack Realistic PRO-37 Scanner For Sale.

It's a Top of the Line Portable Scanner that covers UHF and VHF Bands from 30-54 MHz and 108-174 MHz and 380-512 MHz and Cellular 806-960 MHz.

You can program 200 channels into it, and it has direct-entry of frequencies.

It can scan 10 groups of frequencies, one or all, as you wish, or you can enter the frequency manually if you prefer, or choose the frequency you want to hear from the 200 you have entered into it.

It measures 6.5 inches high by 2.75 inches wide by 1.75 inches deep.

It is in As New Perfect Condition, no scratches, and was used only one year.

$199.00 plus shipping.

Contact: bellavance@videotron.ca

Dear Sheryl,

Here are the facts about the 2006 scanner:

Yes, it is a good scanner. It was the last/best of the cellular
modifiable which also could be modified in many other ways and there were
many addons made for it. It's of good quality and value. It has only one
problem -- it can not do trunktracking of the new 800 mhz motorola systems
unless you add a fair amount of electronics to it do to the work.
That's the story. They are nice, have wide frequency range, work well,
but decoding any of the new trunked systems requires extra hardware.

Ok in Orange and seminole County there is No way to Monitor FHP as of Yet
Unless you have an astro Radio = there is NO rebraodcast as the FHP Radios
(Astro Saber's) work in Non Digital and Digital Mode - FHP at this time is
DEFINATELY NOT allowing programming of any talkgroups for the Media or
anyone else....This is a sad situation as i am wondering what they have to
hide
maybe if all the Local scanner Listeners Petetioned<sp> their local state
legislators then we would have progress .

got to onelist.com and look for G.O.T.T.E.M or orlandotrunking

I too think the PRO-92 was not all it was cracked up to be, but I am
not ready to trash all of RS GRE made scanners.

Many of us forget that they are the ones that brought us the
PRO-2004/5/6 and the PRO-26. I own several RS scanners and only a
couple of BC scanners. I am satisfied with all.

The PRO-92 was the first one I was not satisfied with and promptly
returned.

Next on the list, AM, followed by SSB and NBFM.

By 2100, any mode other than Quantum-modulated pulse modulation (QMPM).
Also, no knowledge of any mode other than QMPM should be tested, as being
archaic.

Is chopping off fingers related to ham radio? Is it a method of
communication? If so, you'll be doing short transmissions, and not for
very long.

Choping off a pinkey has about as much to do with communications as does CW.

The FCC and Congress care little for Amateurs as numbers or Voters...
Hell...At best, Amateurs represent a couple of hundred thousand voters...
very divided voters at that! ...NOT EVEN A DROP IN THE BUCKET in National
Elections!

Right now the FCC is dealing with years of budget cuts... therefore, right
now the FCC cares mostly about budgeting it's resources... Amateur
licensees contribute NOTHING towards FCC budgets. (for that matter...
neither does CB, but the FCC has no cost involved with CB other than
occasional enforcement as in the ham bands, where fines tend to pay for
costs incurred)

Bursts of a hissing sound--rather like an analog modem--have begun to saturate the trunked channels in the mountains, making monitoring of the trunked system all but impossible with a conventional scanner. This noise seems to be associated with trunk ID 15184. Does anyone know what this is?

Now my experience in the Detroit area in the late 50's early 60's was totally different. The local 6 meter club had a number of hams who seemed eager to help someone in their teens get on the air. They gave technical assistance, sold equipment for whatever I could afford to pay, and even loaned stuff when there was no money available. On the air, I felt like I was always treated as an equal even though I was a teen and the rest were older.

221. Picking up aviation traffic with a handheld (Bearcat 245XLT)

Hi,

I was wondering how strong the signals are in communications between planes and controllers either on approach or departure from airports. If I live about 20 miles away from a major metropolitan airport would I need to get a better antenna than that which comes with a handheld scanner or would it usually be sufficient? I'm trying to figure out all of this before purchasing one.

Cheers,
Felix

HI,

I am considering purchasing a Bearcat 245XLT but noticed that it doesn't cover the range between 174 and 406 MHz like the 895 does. I definately would prefer a handheld unit but what would I be missing by not being able to monitor those frequencies?

Thanks,
Felix

Not very strong. The Icom IC-A200 transceiver produces 7 Watts.
Considering aviation communications on VHF are line-of-sight, this is
sufficient for air-ground communications of >100 miles.

> If I live about 20 miles away from a major metropolitan airport would
> I need to get a better antenna than that which comes with a handheld

> all of this before purchasing one.

You shouldn't have any problems hearing aircraft in the air. Whether or not
you'll be able to hear the tower depends on the terrain between you and the
airport.

I'm in an urban location about 6 miles from the local airport. I can't hear
the tower at all using a rubber duck or telescopic antenna. I can get the
tower at reasonable strength by connecting my discone antenna mounted on the
roof.

Occasionally I take a trip to the airport perimeter fence with my handheld.
Its nice to see what's going on as you listen and there's a good view of the
main runway. Usually there's a bunch of aircraft spotters and other scanner
enthusiasts there too!

>

I think this guy is saying that the point of ham radio ISN'T the hurdles per se, but what they are supposed to represent -- knowledge about RF, communications protocols, band plans, and such. It is NOT supposed to be an exclusive club with long rituals requiring lots of effort but unfortunately that is what it has become (well, the club part anyway - and the previous hurdle of higher and higher code speeds for more voice privileges was just gratuitous, but served the desires of people trying to build an exclusive fraternal organization on a hobby whose reason for existance is based upon INCLUSION!).

And that is why it is under attack. And that is why the FCC revamped the licensing scheme to the minimalist one it is set up for: 5wpm test to satisfy the international treaties, and a bunch of multiple choice questions to do the rest. I would figure that it would have been better to have one pool of questions required to get the 50MHz+ certification, and another to get HF + the treaty junk (5wpm code). We went with 3 tiers, which is still a bit elitist, but hey, it is a move in the right direction.

Now, if there aren't increased numbers of hams, I would expect that more ham radio frequencies to be lost to commercial services - so people who are not welcoming of new hams, and try to be elitist about it and ignore, newbies are only hurting the hobby by this irrational behavior and indeed

threatening its existance!! If you want to have a club of old timers, elitist, requiring new members to do lots of rituals to become one of the gang, there are a lot of clubs and fraternal organizations out there whose very purpose is what you crave! I suggest you join them to get that aspect satisfied and then concentrate on making ham radio even more egalitarian and open than it is becoming! I'd love for ham radio to be in the position in 20 years of having the bands way overcrowded due to increased use (not loss of bands!) so we start experimenting with ultra-narrow band technologies to allow everyone to use the stuff!!

Yes, that is just what I was thinking. By having lots and lots of young Hams, losing lots of spectrum would be played as "the US destroying our technological wireless future" but with a small number of older hams and relatively few newbies, it gets played as a bunch of old folks complaining about losing an ill gotten benefit.

Right now, a lot of the interest is in the microwave bands - so I expect to lose most of that in the next 10-20 years unless we start using it, but with the damage we have done to the hobby by being so HF focussed (even to the point of requiring morse code at any level to get non-morse access for so long), even now, there is virtually no experimentation being done by average hams so no public benefit - and depopulated microwave spectrum - so that is gonna go pretty soon.

Interesting bunch of replies. Most of them were kind. Someone got on to me for saying chow instead of ciao. TECHNICALITIES! I suppose it made someone feel better to correct my OBVIOUS mistake. Someone else made a smart remark about waiting another year until the millennium. I think I can properly come to the conclusion that this year has been the most widely accepted year as "The New Millenium" according to the masses and news media. I suppose there will be a FEW people out there saying "Happy New Millennium" next year only to be scoffed at and made fun of. HAHA. Heck, I personally believe its really 2006, but I'm not complaining. I think a few of you missed my theme entirely because of the technicalities. I was just trying to say that I wished everyone "good luck" (even though I don't believe in luck) because many of us were a little tense about the Y2K bug. Plus, I was just hoping everything would be ok with the internet so we could all come back here to post our great messages. Personally I'm glad its all over with and we can go on with our merry lives. I know there may be a few glitches here and there, but for the most part, everything is just great. Hey, to the few of you who just had to correct me - no offense taken. Have a great year everyone! Have fun with those radios!
Chow! (or ﷿Ciao!)

Depends on which "problems" you mean. LTR and Motorola trunking use the same technology for data detection as the CTCSS/DCS detection and decoding. There are some limitations to using the subaudible low-speed data. These limitations do not pertain to EDACS trunking because the PRO-92 tracks EDACS using the control channel (same as the BC-245).

> Essentially- if all I ever listen to are trunked edacs systems, will
> the pro-92 be as 'good' as a 94 or BC245? What about if I listen to
> (only) Edacs systems and conventional channels?

The PRO-94 does not track EDACS. For conventional channels, the BC-245 does not have CTCSS/DCS capability. If you're in a strong signal area, you may not like the BC-245 as a conventional scanner. (I don't like my '245's performance in downtown Rochester on conventional frequencies, but it's a great trunk tracking scanner.)

> -Will the lack of a data skip be a serious concern? There are roving

> advantages of the '92...

"Data Skip" is a different concept from choosing whether or not to monitor data communications while trunking. If the bleeps and bloops are assigned to a talkgroup or subfleet and you are in trunk ID search mode, you will hear them. If you are using a scanlist of selected IDs that does not include any of the noisy groups, then you won't hear them.

During conventional scanning and searching, you can lock frequencies out of your search so you don't have to stop on noisy channels every time you pass through.

> -Has anyone hacked the Pro-92 interface? I give some relevant
> information below...

I follow the trunking-related mailing lists and I have not yet seen any hard info on the interface specification.

> -Is there a new updated version of the BC245? I read several posts
> indicating that there was a rumor about a 'fixed' version with less of

> channels per system.

Most likely any "fixes" for the BC-245 will emerge in a new model scanner.

> -P.S. where's the cheapest place to buy either a 92,94, or BC245
> scanner? Everyone seems to have the same price at the same time, I'm
> wondering if there's a supplier anywhere that can undercut the

The standard Radio Shack price is ALWAYS much higher than the other places in your list.

> > PRO-92
> > I *REALLY* liked the Pro-92 and was all set to buy one until I found
> > the gobs of complaints about it on this newsgroup, among others.

Try one. You may like it, and if you don't the dealer will refund your money if you send it back within their return period.

> > -Alpha tagging

This feature is not on any of the competing models (I exclude the PRO-94 because of your need for EDACS tracking).

> > -CTCSS-PL/DPL

> > 173.8, and always know who I was listening to. These two features
> seem
> > to compliment eachother nicely.

This is all true, and the search feature that tells you what tone or code is in use works just about instantly. However, the PRO-92 defaults to "open" mode when you manually step to a channel, so the CTCSS/DCS does not control the squelch unless you are scanning.

> > almost nothing about trunked systems but from what I've read here and
> > on several websites, the Pro-92 uses toneburst at the beginning of
> the
> > received transmissions to follow conversations while the others

> > actively monitor the data channel all the time.

That's fairly close. The subaudible handshaking is continuous throughout the transmission, though, not just a burst. Reported problems have to do with the trunked system's priority scanning features, because the handshaking data includes announcements of other related talkgroups that are becoming active in case the user has one of those groups set up as a priority. Since the PRO-92 does not implement priority scanning in trunked mode, this information can "confuse" the scanner and cause loss of a conversation under certain conditions.

> > What do the 'real' radios use to stay in synch with the trunking
> > system? That is, what do the real trunked mobile and handheld walkie
> > talkies being used by the police and others listen to? It seems that

Both the control channel data and the subaudible handshaking are used by the actual trunking radios. They use the control channel to initiate conversations and the subaudible data to maintain contact during conversations and use other system features. (That's a bit oversimplified, of course.)

> > -Data skip
> > From the sources I've seen the Pro-92 has no "data skip" feature.

True, but as I mentioned above, you can lock channels out of search mode if they have data on them.

> > -Brand loyalty. I realize that the Pro 94 is made by Uniden, the Pro-

GRE radios generally perform better than the others.

> > The BC245 has 300 channels while the Pro-94 has 1000.

Your main consideration is still going to be the fact that the PRO-94 can't do EDACS.

> > Is there a newer version of the 245?

No.

> > below, are the trunked systems close to me all Edacs, or could some be
> > Motorola, or is there no way to tell from the information I've found?

Go to the NF2G Scannist Pages - SMR Research Section at
http://nf2g.com/scannist/smr_research.html

I have all of the known upstate NY systems categorized by type of trunking in use. Keep in mind that some listed systems have been bid out and the contractor is known to be Ericsson, Transcrypt, or Motorola, but the systems have not been built yet or are not on the air.

> > -Data Skip. From what I've read, all Edacs systems have that annoying

When trunk tracking, signals you don't want to hear will not be heard.

> > the Pro-92 does not have a 'data skip' feature. Am I doomed to
> > scaninng failure if I try to use a pro-92 and there are non-voice
> > signals appearing on the trunk I want to monitor? From what I've

Nope. Just don't listen to those talkgroups.

> > found, the Pro-94 and BC245 DO have a data skip feature. Is it robust
> > enough to really skip over unmodulated carriers, MDT and other data,
> > etc?

Not necessarily. The so-called "data skip" features usually work best on
dead carriers, not on modulated signals.

> > -Computer cable/control: Wow, this is a tough one. I think that

> > The 245 comes with a computer cable
> > The 94 has a port but the cable and software are $70 extra
> > The 92 has no computer control abilities?

That's backward. The PRO-92 has the port and the expensive cable. The
PRO-94 has no computer interface capability. Again, you should probably
just eliminate the PRO-94 from consideration anyway.

> > where you can find software to computer-control the BC245...an
> > important side effect is that you get ALPHA TAGGING (on the computer
> > screen only, of course)! As I said, I do most of my scanning right
> > here by the computer so this may be a decision tie-breaker for me. I

I don't see why. The PRO-92 has native alpha tagging right on the radio
itself, so you don't actually need to run the computer (which will interfere
with the scanner anyway).

> > Will the utilities for the BC245 work with the Pro-94? Or are they too
> > dissimilar?
> > Is there an interface hiding inside the Pro-92 that can be developed
> by
> > a hobbyiest?

Keep in mind that your info about the PRO-92 and 94 are reversed. The '92
does have an interface already, although there is no software available to
exploit it because Radio Shack is still refusing to tell anyone how it
works.

> > Does anyone think that the Pro-94 and BC245 share a similar
> > relationship?

The PRO-94 is not a Uniden radio, AFAIK.

> > -Attenuator
>
> > and if it's important to be able to have it set for each channel or
> > "all or nothing".

I think that's a great feature. I have had scanners with attenuators at the antenna port so all channels are attenuated. I don't need or want attenuation on VHF-low band, but it's almost a necessity on UHF. Per channel attenuation is far superior than all-or-nothing.

> > -The Delay "issue"
> > People have complained about the 5 second delay of the BC245 and
> > Pro94. I read one posting that said that the delay is necesary
> because
> > the scanner needs to listen to the data channel for this long (to do
> > what?). Im not sure when this delay occurs and how annoying it is.

If you are scanning a list of talkgroups (as opposed to searching for new IDs while also scanning mutiple systems), the so-called "delay" does not exist on the BC-245. This "flaw" is highly overhyped by people who had not fully explored how their scanners performed before bitching all over Usenet about things they didn't like. The same thing has happened with the PRO-92.

> > seems that the Pro-92's method of trunktracking is different and does
> > not involve a delay of this type, however this method also misses a
> lot
> > of replies... Can anyone clear this up once and for all or point me
> to
> > a website that clearly explains the issue?

There really isn't such a website that I've found. The websites that I've seen that purport to discuss the PRO-92's problems are gripe-and-bitch sites that fail to explain why the unit has some of the limitations that it has, or recognize that they may be legitimate tradeoffs for certain features.

> > So, you ask- what do I want to know? Well, I'd like your thoughts on

> >
> > -Will the Pro-92's problems be a non-issue for me because I am
> scanning Ericsson and not Motorola trunks?

The PRO-94's limitations are a non-issue for you because it does not track EDACS.

> > -Will the lack of a Data Skip cause me problems?

No.

> > -Will RadioShack release a fixed version of the Pro-92 and make
> > whatever I purchase obsolete? (Rhetorical question!)

Unlikely that they will "fix" a current model. They might come out with a more advanced model in a couple of years. The next big jump will probably

be APCO-25-capable digital scanners.

I have a BC-235, BC-245, HS-200 (conventional handheld with CTCSS/DCS capability), PRO-43, and two PRO-92s. I like them all within my understanding of the strengths and weaknesses of each. I try not to force any radio to do things it was not designed to do.

Jim,

As far as new licenses, it disappears. For present licensees, no
change - you keep your present bands, etc. and can continue to renew.
All you'll have to do to get an Extra under the new rules is pass the
written element (since, as an Advanced, you already exceed the code
requirement).

It is questionable whether the FCC listens to voters since none of the FCC employees are elected. Yes their budget comes from Congress but they are well down in the noise (and money) compared to some of the other players in the Federal budget. Amateur radio matters are even further down in the noise. The FCC's main concern is with commercial interests and major telecom issues.

And the FCC ignored and disagreed with much of what the ARRL proposed
and explicitily stated such in the recent restructuring document.

Happy New Year!

Does anyone have the frequencies for the Yonkers PD? I think they may have changed their system recently (the last year or two).

Also, does anyone have a list of the frequecies used by taxi service in Yonkers?

Thanks in advance,

Rog

Yes,

But you still need 5 WPM to operate HF. They should have eliminated this
requirement. Code is as antiquated as smoke signals.

FreeTracker was an awesome piece of software. Now, I can't seem to find it anywhere. I saw the message at the site that said it was "dead". That is too bad because it was great. Does anyone here happen to have a copy of the last available version before it went "dead"? I sure would appreciate a copy of it. Can send email or post here.

Thanks,

bcsw@home.com

Dick, you are unbelievably jealous of my engineering degree
and my being a ham radio operator while you were still messing
your diapers. Too bad you were nine years old at the time. You
will *never* catch me in ham seniority. Live with it!

Jim,

As I and others have said, this cannot be done legally at this time.
The ITU Rules REQUIRE a Morse Code requirement for a Amateur License
that has operating privledges below 30 mHz. Until this requirement is
revoked, the FCC's hands are tied.

Regards,
Bill Bowen

Why don't you assholes take your ham bull shit to the ham newsgroups.
This is a scanner newsgroup.

3/4 of the posts are about the hams getting new rules and it doesn't
affect the scanner people in the least.

So, bug the fuck out..............

Most of the people who are coming of age for HAM radio were not born in the 50's
and 60's.

I am 52 years old and until an accident laid me up for almost a year I had no interest
in ham radio or even CB. I chose ham radio because we all know the mess on CB. No
one who professes to like Ham radio wants to see it go the way of the CB. I am currently
a no code tech, but I will be taking my test for General before the 04-15-00 deadline. I
have had a hard time with the Morse code because of a hearing problem, but I will still try.

Change can be the most painful of experiences or it can a pleasant surprise. If Ham is
to survive then we all must be open to change. Those who are at the top of the Ham hierarchy who will soon be reduced to general are going to hate it.

I wonder if we will ever stop P+Moaning about what was and do what is needed to make sure our hobby flourishes. The choice is up to all of us

So this 40 year old information has what to do with anything? This attitude is the problem. "Things were fine 40 years ago when I started so why change anything." The last time I joined a club a couple of years ago (are you listening McHenry County Wireless Association in Illinois) they took my money but never added me to the membership roles. I wasn't quite 50 at the time so I guess I didn't quite meet the minimum age which probably averaged 65.

And if we are lucky we will out number the fogies and have a lot more of us to talk to. Trouble is I don't have any ailments to talk about. Guess we will have to break HAM tradition and talk about something real like curent technology or something.

A not so happy new year for UK scanner listeners.

UK emergency services to move to digital radios from April 2000.

Check out http://ukscan.cjb.net for full story.

Well N8TB, when are you going to answer the question that Pappy wrote?

If you can't run with the big dogs stay off the street. Other wise: Shit or get off the pot.

Pappy@sgi.net wrote:

267. (*) Icom IC-PCR1000 frequency modification

Newsgroup: rec.radio.scanner
Date: 2000-01-02 00:00:00 UTC
From: Seminary Student <romans10-9@hawaii.rr.com>
Message-ID: <l0Rb4.7$Qa5.872@hnlnewsr2.hawaii.rr.com>
Source record: 97757

23-08-1998 Icom IC-PCR1000 frequency modification

You've been waiting.

You've been told it can't be done.

You don't want to pay for it.

Here's how you do it.

The PCR-1000 full coverage mod:

What you'll need:
Small philips screwdriver
Slightly larger philips screwdriver
Soldering iron with *very* fine tip
Xacto knife, or other sharp tool
2 0-ohm surface mount resistors, 0804 in size, or 30 guage wire-wrap wire
No fear of surface mount components
Ability to follow instructions

Very very very first step. Read ALL the steps before starting. Make sure you feel comfortable making a mod of this nature. It's not rocket science, but it
does require a steady hand.

There are three things that can happen as a result of this mod.

1.You're completely successful.

2.You screw up a surface mount pad, but the radio still works when you're done.

3.You're a total hack using the wrong tools, and you send the radio back to Icom for repair.

Hopefully, you're a result 1 type person. At worst, you're a result 2. If you
think your going to be a result 3 type, don't even start. Call a friend.

We've done this mod on 2 radios with complete success. We can't guarantee that in later radios this mod will still work. It works at least with serial numbers
up to 1111 in the last 4 digits.

Let's get started!

Remove the 8 screws that attach the cover, and remove the top cover of the radio.

Orient the radio so that serial, power and RF connector are closest to you,
and the power switch faces away from you.

On the PC board closest to you, in the upper left hand corner you should see
a 80 pin surface mount chip. It has a number such as 64F3334 stamped on it.
This is the processor.

Near the upper left hand corner of the chip, you should see 2 small green
0-ohm resistors. To the left of the two resistors you should see an
unpopulated
pair of pads. These are the 3 "R"s below, on the left. The 4th "R" is used
for
location reference below.

(Picture courtesy of Alan Adamson, NE1H)

Using the soldering iron and knife, *carefully* remove the right hand
resistor.
You'll need to alternately heat the two ends, while apply a *light* pressure
with the knife. Once it's hot enough, it will left off. It's very easy to
destroy the
pads the resistor is soldered to, so be *careful*.

You'll now need to short the pads of the left resistor (this is the
unpopulated
one). You can either try and re-use the resistor you just lifted (least good
idea), short them with a short piece of wire wrap wire (OK idea), or use a
real
0-ohm resistor (best idea).

For the next step you have two options. One option is easy and does not
require removing the board from the radio (recommended). The other option
is "more correct", but will require disconnecting all the cables, removing
the 5
screws that hold the board down, etc (purist method). We'll presume you're
more likely to want easy, so here are the steps for it.

Keeping the radio oriented as described above, look below the right hand resistor (the one we removed). You should see 3 vias (holes) (see picture above). Follow the left most via, and it should go to the left most pin of the processor. The second via should go to the next pin to right, and third via should go to the pin to right. At this point, you should see two pins that don't appear to be connected to anything, then a pin that connects to a small black resistor marked 201 (this is the 4th "R" in the picture).

If you've sucessfully located the 6 pins above, we want to short the pin that is the 4th from the left to ground. Above these 6 pins, you should see a small black rectangle, with 8 pins. I believe it is marked 220. On the side of this part (it's a resistor pack), there is a pin that is soldered to the ground plane.

To short the 4th pin from the left to ground, tack a wire to the pin. Be *very* careful not to short the adjacent pins to the 4th pin. It's very easy to do. It you do, use a piece of Solderwick or coax braid to remove the solder. Better yet, don't short the pins. Tack the other end of the wire to the pin on the resistor pack described above.

OK, you'd rather do it the "more correct" way. Disconnect all the cables from the board. You'll need to remove the shield from the RF section to remove the white ribbon cables. Disconnect the power and speaker cable. Remove the 5 screws that hold the PC card down. Remove the card from the radio.

Orient the board as described above. Look for the white connector above the packet connector (lower left). It's marked J12. Just above that are a pair of solder pads for a resistor. One side goes to ground, the other goes to a via. Follow the trace on the bottom side of the board. You should see that it goes to a via, but that the trace has been cut right next to the via.

Using a sharp knife and a lot of care, scratch away the solder mask to reveal bare copper on the trace. Use a piece of wire wrap wire to repair the cut trace (bridge the trace to the via). Back on the top side, short the pads for the resistor that are open (this is the lower case "R" on the left, off by itself).

Reassemble the radio. If you used the "more correct" way, make sure you get all the screws and cables back in.

Plug it in, turn it on, fire up the software. Tune a frequency you couldn't before. If you can tune it with the software, and the squelch is open, you're
working!

If it's not working, review everything we described. Make sure you didn't short any pins. I can't offer you much more help if it didn't work.

Remember, you screw up your radio, it's not my fault. I don't work for Icom, I
don't represent Icom. I don't endorse listening to frequencies you're not supposed to, and can't be held liable for anything that happens, anywhere in the universe, as a result of you making this mod, or even thinking about making
this mod (Gawd, I hate lawyers. CYA!). This mod was done completely from our own experience and background, and did not reference any material. We don't know about these people selling the mod on the 'net, but we didn't steal
it from them.

Hope this helps. If you've got any suggestions to improve how to make this mod, please send e-mail. If you made this mod, let us know how it went. Also, if you want a list of the PCR-1000 commands we know about, drop us e-mail, or use DejaNews(tm) and search the alt.radio.scanner groups for the post (look for PCR-1000 in the subject).

- Chris, KD4DTS

(Thanks to Alan Adamson, NE1H for his being ready and willing to sacrifice his radio to a higher cause, and his drawing).

I bought one too. They were on sale for $300 at Radio Shack and my nephew works at RS and gets a nice employee discount for "Uncle Stan". So I got one real cheap $$.

Unfortunately it isnt even worth what I paid for it.

First off, I am an experienced scanner listener and ham radio op (30 plus yrs). I presently own 5 scanners, and really didnt need another but one can not have to many radios.

I really dislike this 2052. Cheaply made is putting it nicely, I doubt this radio has any metal in it at all. The LCD readout is tiny, very hard for my old eyes to read. The LCD readouts on my Bearcat 890xlt and Pro 92 are much larger.

Sensitivity is a little less then my Bearcat 890, and about the same as the Pro92. The audio is not very good, it has a very small internal speaker. No external speaker jack. It does have a earphone jack that you can plug a speaker into but the audio is MUCH reduced over a regular external speaker jack.

No alpha numeric tags and no tone decode - something I sorely miss.

I put the 2052 on my outside (40 ft hi) antenna and like most Uniden radios it exhibits intermod.

It has service search but it looks like they left out a lot of freqs. Also NO one button Wx.

Trunk scanning works ok.

This radio is going back to Radio Shack. It is way overpriced at $370 or even on sale at $300.

Stan

277. BC 245XLT Talk Group ID Sleuthing

Newsgroup: rec.radio.scanner
Date: 2000-01-02 00:00:00 UTC
From: Bill Tobin <wjtobin@uplink.net>
Message-ID: <0JTb4.8593$la2.297594@newscene.newscene.com>
Source record: 97767

OK guys, this is really cool!

Looking for a really easy way to track down the ID's for your local trunked system with your BC 245XLT? Read on!

1) Set the 245xlt to the pc control mode as described in the manual, and connect to the appropriate COM port

2) Begin the "search" mode on your scanner for the trunked system in question

3) Press and hold the "remote" button on the scanner to allow "pc control"

4) Start "HyperTerminal" program in Windows (Start > Programs > Accessories > Communications > HyperTerminal)

5) Give the session any name and icon you want and click "OK"

6) A new window pops up. Under "connect using," select the COM port connected to your scanner. Click "OK"

7) Another window pops up. Under "Bits Per Second," choose 9600. Under "Flow Control," choose "none." Click OK.

8) In the HyperTerminal window, choose File > Properties, and click the "settings" tab.

9) Under "settings," click the "ASCII Setup" button and check the box marked "Append line feeds . . ." Click OK, then OK again.

THAT'S IT!!! Talk group ID's begin materializing in the window as they become active. For unattended operation, click the "Capture Text" option in the "Transfer" menu. Create a log file and click "start."

Then, go off to work. Hyperterminal will write all the ID's to the file. When you get home, return to the "capture text" function and click "stop."

Open the file, and all the ID's your scanner hit will be there.

Pretty cool. Credit goes to "Harold," who posted instructions on Rich Wells' Strong Signals site.

http://www.strongsignals.net/

The specific post, with replies, can be found here:

>Someone else made a smart remark
> about waiting another year until the millennium.

It was a smart remark because they were thinking smart. The new millennium doesn't start until Jan 1, 2001. There is no debating that. The media-driven lemming-followed hype notwithstanding.

> I think I can properly come
> to the conclusion that this year has been the most widely accepted year as
> "The New Millenium"

Sorry, but no you can't. Just because it's "accepted" doesn't make it correct. Rolling through stop signs and speeding and listening to cell calls on a scanner is accepted - but it's still against the law (or at least FCC rules). You need to know the difference between what's accepted as popular belief and what is actually fact (via hard math in this case). There are two Millennium "beginnings" - one is incorrect and media-driven, the other is the actual yet not so popular date of 2001. No surprise. People hate that extra 1 digit.

>according to the masses and news media.

Oh yeah, I'd follow the masses over the cliff, and believe the news media telling me it's a great idea. If I went along with the masses and news media on everything, I'd be wearing beige Dockers, driving a white Taurus, and eating McDonalds regularly just to get the toy.

Who you gonna believe, true facts or all the hype? You can think like an odometer or you can think rationally.

> I suppose there
> will be a FEW people out there saying "Happy New Millennium" next year
only
> to be scoffed at and made fun of. HAHA.

Truth and fact are very often scoffed at. That's why people find it so disturbing. The laughter we hear is nervous laughter. I think it's funny. But there will be more than just a few people saying Happy Millennium. And in fact, I believe the media will wise up about 3/4 of the way through 2000, for no other reason than to have one more thing to jump on to hype-up. I predicdt that the big deal in the waning months of 2000 will be all kinds of talk - all over again - about the beginning of the "real" millennium. Perhaps not with the Blast-o-Hype we had for the 2000 rollover, but it will be made very evident by the ever-eager-for-hype media. The masses as usual will go along, and this time it will be for the correct reason. In any

case, what a great way to have millennium parties two years in a row - true fact or otherwise. I'll go along with the masses on THAT one.

>Heck, I personally believe its
> really 2006

Whatever. But I'll lay my bet on 2001.

Do your part - instead of Happy New Year, say to people "Happy Last Year" (as in, last of the millennium).

Not attacking you, but rather the popular view we all are seeing.

Chou.

Just a word of caution about my previous post:

DO NOT send commands to your scanner unless you know what you're doing.

For instance, typing AC <cr> during such a session is the equivalent of pressing 2,9,MAN during power up of the scanner, and will erase all memories!!!

If you are in the US, the transformer and power cord on
the 2042 can be swapped out for the US version. You
might want to install an OS535 interface for full computer control
and also a PROgramit Interface to program the 1000 channel
memory.

Bottom line for me: Most people on earth will be writing a "2" in front of their date for one thousand years! Kinda cool to be there the moment it starts. :-)

I'll celebrate next year too. because how cool is "1/1/1" - tied with 9/9/99 ;-)

293. Apopka & Oviedo, FL strangeness...

Newsgroup: rec.radio.scanner
Date: 2000-01-02 00:00:00 UTC
From: "Steven G. Bradley" <sbradley@southern.edu>
Message-ID: <38702B70.34565959@southern.edu>
Source record: 97783
Body handling: Binary attachment payload not displayed: sbradley.vcf

I am not sure if anyone may have an idea as to what is going on, but here is what I've noticed for these two:

Apopka -- I know they have a SmartNet system which used to work. It has a valid control channel, and my trunktracker faithfully looks and finds nothing happening. I get suspicious and plug in the 155.010Mhz on another scanner and lo and behold, there is life there! Not alot, but sounds like Apopka PD stuff. Strange, no simulcast on their 800 mhz system. Could this be the product of a Y2K glitch?

Oviedo -- they have a VHF channel (158.91) that they are using. But the cars can also use their Charlie channel on 800 Mhz. This means 800 Mhz is working fine, but dispatch is not using it.

Any clues what is going on with either one of these? In the case of Oviedo, it does not make sense as it appears the cars are working ok on 800.

Last question in case anyone knows --

There is a small four frequency smartnet system for Maitland, FL in existance. They are also simulcast by Orange County as well as Winter Park. Question -- is the small four frequency system intended as a "booster" with the main access from one of the other two, or do the other two carry it as a courtesy? I wonder because I am close (10 miles at most) and it is fairly weak. Makes me thing the four frequency version is not intended as their primary site. Any suggestions on this would be appreciated.

As for Orlando, Orange County, and Seminole County -- they all work as expected. I find Lake County is still on VHF... anyone know the _exact_ channel assignments vs frequencies? I am in northwest seminole county and never have figured them out yet.

Comments on the above will be appreciated!

294. Orange Co., CA. Fire TRS Info?

Newsgroup: rec.radio.scanner
Date: 2000-01-02 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <38704FC1.B96DD3F7@earthlink.net>
Source record: 97784

Greetings.

Does anyone out there have information on the new Orange County, CA. fire trunk system? It changed about two weeks ago, and the frequencies have changed, with new ones added, and some old ones abandoned. Now all cities and the county share the system frequencies, minus Costa Mesa and Santa Ana, which appear to be on a separate system, and Laguna, which is on a separate non-trunked channel because of local geography. My understanding is that all cities except the two aforementioned ones all share the same plan, although there appear to be two separate data channels, with one that keeps some of the transmissions segregated from the main shared system. The three main dispatch frequencies for north net, central net, and the county appear to no longer be fixed (non-trunking) - dispatches seem to go out on any of the trunk channels now, which I assume is normal for a trunked system Any info is appreciated.

Best Regards,

Doug Gavilanes
Garden Grove, CA.

I'd say it's several steps above AM, which occupies twice as much bandwidth as SSB and requires considerably higher power than SSB. About 95% of my HF contacts have been SSB, with maybe 3% CW and 2% RTTY. I've made perhaps half a dozen FM contacts on 10 meters, but wouldn't know whether my rig really transmits AM.

FM and AM are fine where high audio quality is needed, such as for music, but for communicating on the HF bands, I can't see why anyone would use either of them.

I think that's mostly true in my case too. I did like the Pro-2050 before I sold it to buy the BC895 (wanted PC control). I also still have and use a Pro-51 and a Pro-90 that I really like. The 51 has obvious cellular benefits but beyond that it's not the best radio I've ever used. The 90 is the same as the Uniden bc235 which I consider to be an excellent scanner.

As for the 92, I can't say enough bad things about it. The argument that it's a good conventional scanner doesn't work because it won't operate ijn closed (PL) mode unless it's scanning. Go to manual and you're in open mode again. Besides you're paying for trunk capability that is completely useless on a moderately busy system. Save your money and get a real scanner.

The Durham Region Radio Group of Canada site has been updated.

- Information on the Canadian NORAD division has been update in the Military section.
- The addition of NASA TV to the Satellite page and other information.
- Updated scanner and shortwave frequencies, information and links have been updated.
- Updated information and links for the Aeronatical/ACARS pages.
- Site format has been changed.

Now accessable via:

> Where can we verify the latter part of your statement, Dick?

Can you think of any OTHER reason why they would have done
so?
Quick, get that super IQ to work and thinkup some catchy
answer.

Meanwhile the rest can read a report from a EA ham:

This is the experience from Spain. Here in EA-land
we had the CW reading tests optional for the HF bands during
the 80's and, as
those of you who were active on the bands by then could
testify, the spanish
phone ops were internationally regarded as "lids". The ranks
were flooded with
CBers looking for more room and their jargon has still firm
influence in the ham
phone language. Most of them bought expensive antennas and
japanese blackboxes
but got bored in a few years and are not active anymore.

Yeah, I know-all politics is local and in ham radio all
"evidence" is anectodal. "Proof" just doesn't exist, does
it? Unless, of course you want to query the Spanish
telecommunications authority to see why they would do such a
Luddite act as reinstituting mandatory Morse code tests for
their ham radio operators....

Hi There Easy,
I have owned a 9000 for about 2 years and I like it a lot.

If you bought a new 9000 that was made for the US market, it is NOT cell capable, I hate to say. I bought mine in New Zealand and it gets all the cells you can listen too (but it really is not that interesting once you have listened for a while...)

I like it for all the HAM bands (10,6,2,220,440,1.2Ghz) as I'm a ham. Also all the aircraft and new stuff on 900Mhz, and different modulation modes (AM/NFM/FM). Tons of memories too.

We are just lacking trunk tracking, otherwise it is a nice unit to have.

Have fun,
Seek

So what makes you think this restructuring saves a single
hz of ham radio spectrum? When the commercial demand rises
to a certain level, any ham radio UHF/VHF/SHF spectrum not
committed to ham radio via international treaty WILL be
withdrawn and refarmed. Bet on it. And even that allotted to
hams under international treaty can be reallocated if need
is such that FCC decided to take an exception to the treaty

So if you believe that this change solves anything, time to
rethink the whole situation. No realistically conceivable
added numbers of new hams will help.

310. 800/900 MHz Yagi Antenna. Trunked, Cellular, Amateur, Commercial.

I have seen much info. posted regarding the talkgroups used by the City's radio system. NONE of it seems to jive w/the info I have acquired by using my PRO-92.

I am interested in comparing notes on this scanners performance, as well as other trunking scanners in the City of Clearwater, and Pinellas county in general.

Talk to me,
Tony

The ARRL, though caught off guard with the FCC proposal made several
counterproposals... all published in QST...

>I'm sorry, I have not heard this issue discussed.

Obviously, you're not an ARRL member or you would have heard in QST
(assuming you READ it) It was in ALL the HAM mags... I trust you don't
expect the ARRL to knock on your door to inform you of pending FCC
changes....

>Really now, how difficult is it to use the any of the blocks of letter
call prefixes... that's a >simply administrative duty for the FCC to
implement...

I think they'd just as soon not be bothered with Hams at all... when's the
last time the FCC got anything out of your pocket, fee-wise? (be fair now...
amateur related expenses only, don't include vanity calls)

He's looking for the "service" manual, rather than the user manual.

Jim,

The FCC cannot eliminate the Morse Code requirement below 30 mHz -
this provision is part of international radio law.

Darrell,

Basically a sound idea but it runs counter to a really basic thread
that perminates the entire rulemaking - the FCC wants to make it as
easy as possible for them to administer ham radio. Your proposal runs
counter to that.

Now, I'll add my $0.02 to the whole discussion. I first got
interested in ham radio in 1958 at the age of 9 - got my first license
(Novice) in 1963; became a General in 1965. Built my own first rig
(transmitter was crystal controlled 6J6 oscillator and an 807 final,
receiver was a Knight-Kit regen receiver, later traded in for a
Hallicrafters SX-25, which I sure wish I had of kept). Had some good
times as a ham - even met my second wife via ham radio.

However, I lost interest in ham radio in the early 80s when I got
into computers and let my license lapse in 1983. Sold my last HF rig
(an SB-104A with all the goodies) in 1985 but still have, in the back
closet, my old 2 meter rig (a Motorola Metrum with the PLL exciter
board conversion kit). I've seen a lot of changes in ham radio, and I
think that, all in all, this R&O will be good for the hobby.

Regarding the code test, remember back in the old days when the code
test was one minute error free copying AND you also had to send one
minute error-free (AND you had to use a straight key - no "bugs" or
keyers)? We sure have come a long way to the multiple-guess code test
and no sending requirement! To many people the code requirement is a
real emotional issue - I'll admit it was for me for years. I'll go
along with the reduced speed requirement, though I wish they would
reinstate the direct copy instead of the multiple-guess.

To me, the more important aspect of ham radio is the technical knowlede of communications and how to apply that knowledge. To that end I'd like to see the tests upgraded with a closed question pool. Another poster mentioned that the tests are about a generation behind current thehnology - that should be rectified. The max. grid current on a 6146 was valid in 1970; far less so in 2000. Some basics are timeless, such as basic electron theory and antenna basics, also basic operating procedures. From my listening to the HF bands lately, that last item is in DIRE need of attention!

A friend of mine from Germany has gotten my interest in ham radio restarted, and I was planning to go up for a General sometime in early February - maybe now I'll hold off until April and go for the Extra on the first shot (lordie, in 1963 the Extra was like a shining light on a very far away hill for me).

I never thought I'd hear myself say this, since in the past I've always come down on the side of "quality VS quantity", but the bottom line is that what is going to save ham radio from the "spectrum vultures" like the HF broadcasters and another UPS with a hair-brained scheme is NUMBERS - that is what the politicians at the FCC respond to. The more of us there are, the harder it is for them to screw us (more hams=more hams that VOTE). Thanks goodness we do have a few hams in the FCC that can be a voice, but it still comes down to numbers. Something else that would help is to get more hams elected to office - many of you know what a champion Barry Goldwater (K7UGA) was of ham radio during his years in the Senate. We don't have a ham of his stature in national office presently.

Well, I've consumed more than my fair share of bandwidth, so I'll close with the following thought - - -

Look at this situation keeping in mind how the world IS, not how we'd like it to be. We have to deal in REALITY and in the present, not in the past.

Hello!
I think my point may have been lost in my long original post. Many people replied (and I thank each of you) to let me know what scanner they have/enjoy/reccomend/etc. This is good to see but what I want to know is:

-Are the Pro-92's problems ONLY related to receiving Motorola trunked transmissions? Someone recently told me that my local trunked systems are all edacs so this point has become more important for me.

Essentially- if all I ever listen to are trunked edacs systems, will the pro-92 be as 'good' as a 94 or BC245? What about if I listen to (only) Edacs systems and conventional channels?

-Will the lack of a data skip be a serious concern? There are roving data bursts that I hear on *different* frequencies (when monitoring the trunked frequencies on my conventional scanner). Will the Pro-92 occationally stop and force me to listen to these non-voice bleeps and buzzes (*more than the 92 or 245 would*)? Or will it somehow recognize it as data and skip over it? Conversely, if I get a pro 94 or a BC245, will the data skip be robust enough to skip past these data transmissions? If the 94/245 data skip wont really protect me from these data "intrusions" then there's no reason to deprive myself of the advantages of the '92...

-Has anyone hacked the Pro-92 interface? I give some relevant information below...

-Is there a new updated version of the BC245? I read several posts indicating that there was a rumor about a 'fixed' version with less of a delay (less than the current 5 second delay) and more than 30 channels per system.

-P.S. where's the cheapest place to buy either a 92,94, or BC245 scanner? Everyone seems to have the same price at the same time, I'm wondering if there's a supplier anywhere that can undercut the "Standard Radio Shack, Scanners Unlimited, Scanner World, and Grove Price"

I've left my original post below for reference.
Thank you again to anyone who puts their two cents in.

You may soon be able to monitor Motorola ASTRO digital comms with a package being introduced by Greg Knox, developer of the TrunkTracker technology used by Uniden. It will be expensive - possibly close to $1,000, depending upon the initial cost of the vocoders. I believe this will be a software/interface system to connect radio to computer. Look for more details between now and the Dayton Hamvention in April.

Hell, they did that in the 50's when CB was established. We have been using no code below 30MHZ since then.

PA. TURNPIKE UNITS
150-series are Ambulances 200-series are tow trucks
300-series are State Police 2000-series are highway maintenace

Police & Maint/Work Crews use same channels on.
PSP Troop T handles patrols on the turnpike. ALL Troop T dispatch

is done from Harrisburg. System is linked via microwave.

Pennsylvania Attorney General's Office

154.950 (F-1) -Drug Enforcement Mobile-to Mobile
155.445R/XXX.XXX (F-2) -Drug Enforcement Dispatch
155.490 (F-3) -Drug Enforcement Regional (CLEAN)
156.090 (F-4) -Drug Enforcement Special Operations
460.200/465.200 179.9 Department of Justice North Repeaters (F1)
460.475/465.475 179.9 Department of Justice South Repeaters (F2)

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475
From R.E.Christian (wpascanrec@geocities.com)

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)
From R.E.Christian (wpascanrec@geocities.com)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.425 PEMA Rain Gauges
169.500 PEMA Rain Gauges
169.525 PEMA Rain Gauges
170.275 PEMA Rain Gauges

171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges
171.125 PEMA Rain Gauges
171.850 PEMA Rain Gauges
171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

From John Bohn jtbohn@ptd.net

DEP offices include 6 Regional Offices (Conshohockrn, Wilkes-Barre, Harrisburg, Williamsport, Pittsburgh, and Meadville) numerous satellite District Offices, and several Mining Offices (Pottsville, Hawk Run, Knox, Ebensburg, Greensburg, McMurray). Each of these office has a base radio that can utilize different combinations of the above repeaters or primary channels. For instance, Conshohocken uses 151.385 (103.5) for primary communications and also utilizes any of the Zone 1 repeaters that cover the service area of that office. A map showing the coverage areas of each of the Regional DEP offices can be found at http://www.dep.state.pa.us. DEP offices in Conshohocken, Reading, Harrisburg, and Pittsburgh also use 151.160 (186.2) for Radiation Protection. These 4 offices can operate via a microwave link over this channel for nuclear disaster drills/operations.

PA. DEPARTMENT OF ENIRONMENTAL PROTECTION (DEP)
OFFICE
Region 1 Southeast (Conshohocker)
151.385 103.5 Primary
151.160 103.5 Secondary
151.160 186.2 Radiation Protection
Region 2 Northeast (Wilkes-Barre)
151.385 103.5 Primary
151.175 156.7
151.385 88.5
151.175 114.8
Region 3 Southcentral (Harrisburg)
151.385 103.5 Primary
151.295 114.8 Secondary
151.160 186.2 Radiation Protection
Region 4 Northcentral (Williamsport)
151.295 114.8
151.175 156.7
151.175 114.8
Region 5 Southwest (Pittsburgh)
151.385 127.3 Primary
151.160 127.3 Secondary
151.160 186.2 Radiation Protection
Region 6 Northwest (Meadville)
151.400 103.5 Primary

DEP mobile units identify usingtheir program addreviation or Mining office name:
AQ - Air Quality
BF - Black Fly Sppression Biologist
ER - Emergency Response
WM - Waste Management
WQ - Water Quality
Pottsville xxx, Hawk Run xxx, etc - personnel based in a Mining Office
others may vary by office

Unit ER 11 would be the Emergency Response Chief for the Southeast (Conshohocken) Region of DEP. The first number designates the region,

the numbers following that are unique to a person or position.

Also State Parks and some Fish Comm. units use DEP & DCNR Freqs.

Regional Land Mgmt\Food and Cover Corps personnel are deoted with an ID of
65x for the SE region.
Units with a 60x ID are management and unassigned officers (floaters).
Any of the above numbers followed by an alpha character denotes a deputy
of the area officer.

Statewide IDs:
Wildlife Mgmt personnel use 5x and 6x ID's (i.e. 5, 55, 60).
Land Mgmt. personnel use 7x, 7xx and 80x ID's
Education uses 9x Id's and Foresters use 8x & 8xx Id's
There are a few other ID's in use, but they shouldn't be frequently
encountered.

How do you plan on getting the audio to the software to be decoded?

Well now....
I have a ALINCO DJ-C1T (the credit card 2 meter xceiver) that came with
a charger that will quick charge in about 2 hours and will add another
20-30% to the charge during the next 20 hours. This sounds like it is
trickle charging to me....It uses a single cell 3.7 v 500 mah batt.

348. Uniden BC 245XLT discontinued?

Newsgroup: rec.radio.scanner
Date: 2000-01-03 00:00:00 UTC
From: mcollins@null.net
Message-ID: <3870c89b.6912046@nntp.ce.mediaone.net>

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi,
I tried to pick up a BC 245XLT from Sears. The cost was 250. They said that they were out of stock and then came back and said that the item was discontinued.

Is the 245 discontinued? If so is the new modle that much better? I'm just getting started so if I can get the 245 for a discount because it's discontinued that's ok, as long as the new model isn't that much better.

Thanks...also, where else might I be able to pick one of these up?

I am well pleased with my 6m amateur antenna for receiving low band signals such as in the 40-50 mhz
range. Since the antenna is sold as a dual band 2m/6m antenna, it is also particularly good for the
150 mhz business bands. Not so good up at 800 mhz for police or fire, but still better than the
rubber duck antenna on the handheld unit.

*The FCC made known its restructuring decision today and it sucks!
*
*I Blame the ARRL!
****

I think you are placing the blame on the wrong entity. If any body needs blame it should be the FCC. In your point of view the whole amatuer world has now come crashing down. If that is your opinion maybe it is time that you not renew your license and give up the hobby. The FCC is thinking beyond your narrow minded thinking and self gratification. They have the insight to realized that left as is, the amatuer radio service will be a foot note in history of radio in the next ten to twenty years. Maybe you will be dead and gone by then and that no longer is of your concern. For the first time in twenty years someone has finally realized the the amatuer radio society in the US will be extend as the Dodo bird by the end of the 21st century. For those of use who will still be arround at least into the middle of the 21st century there is now hope that there will remain an amatuer radio service. I am sorry that you will think of amatures like myself and others who will obtain the full priviledges that the FCC will grant inthe future. These priviledges to you will be obtain by means that in your opinion is cheapened. It is cheapened by the fact that I and others to follow will not have to endure that hardship that you had to. This may well be true. CW, while a means of communications, is no longer the mainstay of amature radio today. Is it becoming a lost art? Most likely. Is it a requirement that high speed proficiency is required for advanced priviledges in other forms of communications? Not hardly. The days where amatuer radio shared bands with commercial maritime ships are long gone and past. Then the need to identify ships in commercial enterpriose and not to interfere with them has long gone. CW will always be a menas of communications. So will AM as well as newer digital forms of communications. The radio service has evolved from a time of experimentation to that of more of a hobby. Experimentation is and will never be lost. Experimentation fosters new ideas. The amature radio service has lost that zeal. I think the service needs an infusion of newer more energetic members. Agreed there will alows be those that are less desirable as some may think. Do we close off the whole bands to only those that will meet a certain criteria? then that smacks of the prejudices of the early 20th century. From an outsiders point of view amature radio has become an elite good ol boys network. Sommething like the exclusive country club atmosphere of the high society.

We now have entered into a new era. I think the FCC has made a bold and daring step in amature radio. While many will applaud, some will shudder in fear of what will happen. Remember this no one is twisting your arm to be a member. It

is become obvious that the FCC went farther than many wanted and to some it may not whave gone far enough. As for me, I am pleased with the ruling. I think it give amature radio a channce to survive well into the 21st and even into the 22nd century. What will happen in the future? No one knows. This has been needed for the last twenty years and now it has come. We have no other choice accept it by be ing a part of it or reject it by not being a part of it. It is your chjoice.

regards
james

WA4BZJ

*
*
*NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new
*millennium. The FCC today issued its long-awaited Report and Order in the
*1998 Biennial Regulatory Review of Part 97--more commonly known as
*"license restructuring." The bottom line is that starting April 15, 2000,
*there will be three license classes--Technician, General, and Amateur
*Extra--and a single Morse code requirement--5 WPM.
*
*"We believe that an individual's ability to demonstrate increased Morse
*code proficiency is not necessarily indicative of that individual's
*ability to contribute to the advancement of the radio art," the FCC said.
*
*Besides drastically streamlining the Amateur Radio licensing process, the
*FCC said its actions would "eliminate unnecessary requirements that may
*discourage or limit individuals from becoming trained operators,
*technicians, and electronic experts."
*
*Although no new Novice and Advanced licenses will be issued after the
*effective date of the Report and Order, the FCC does not plan to
*automatically upgrade any existing license privileges. The
*ARRL had proposed a one-time across-the-board upgrading of current Novice
*and Tech Plus licensees to General class, but the FCC declined to adopt
*the idea. This means that current licensees will retain their current
*operating privileges, including access to various modes and subbands, and
*will be able to renew their licenses indefinitely.
*
*Starting April 15, 2000, individuals who qualified for the Technician
*class license prior to March 21, 1987, will be able to upgrade to General
*class by providing documentary proof to a Volunteer Examiner Coordinator,
*paying an application fee, and completing FCC Form 605.
*
*The FCC's decision not to automatically upgrade Novice and Tech Plus
*licensees means the current Novice/Tech Plus HF subbands will remain and
*not be "refarmed" to higher class licensees as the ARRL had proposed. The
*FCC said it did not refarm these subbands because there was "no consensus"
*within the amateur community as to what to do with them.
*

*As it had proposed earlier, the FCC decided to lump Technician and Tech
*Plus licensees into a single licensee database, all designated as
*"Technician" licensees. Those who can document having passed the 5 WPM
*Morse code examination will continue to have the current Tech Plus HF
*privileges. "If documentation is needed to verify whether a licensee has
*passed a telegraphy examination, we may request the documentation from
*that licensee or the VECs," the FCC said.
*
*In addition to reducing the number of license classes from six to three
*and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
*number of written examination elements from five to three, authorize
*Advanced Class hams to prepare and administer General class examinations,
*and eliminate Radio Amateur Civil Emergency Service (RACES) station
*licenses. RACES will remain, however. "After review of the record, we
*conclude that we should eliminate RACES station licenses because RACES
*station licenses are unnecessary for amateur stations and amateur service
*licenses to provide emergency communications," the FCC said.
*
*Under the new licensing scheme, there will be four examination elements.
*Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-
*question written test to obtain a Technician license; Element 3 will be a
*35-question written test to obtain a General license, and Element 4 will
*be a 50-question written test for the Amateur Extra license. The FCC has
*left it in the hands of the National Conference of VECs Question Pool
*Committee to determine the specific mix and makeup of written examination
*questions. Current Amateur Radio study materials remain valid at least
*until the new rules become effective in April.
*
*The FCC's new licensing plan means someone will be able to become a ham by
*passing a single 35-question written examination. The plan also simplifies
*and shortens the upgrade path from the ground floor through Amateur Extra-
*-especially since amateurs will only have to pass one Morse code test.
*
*Elimination of the 13 and 20 WPM Morse requirements also means an end to
*physician certification waivers for applicants claiming an inability to
*pass the Morse code examination due to physical handicap.
*
*The effective date provides a window of upgrade opportunity for current
*Advanced licensees. Between now and April 15, current Advanced holders may
*take the existing Element 4B, a 40-question test, giving them credit for
*having passed the current Extra written examination. Likewise, holders of
*a Certificate of Successful Completion of Examination (CSCE) for Elements
*3B or 4B dated on or after April 17, 1999, will be able to qualify for
*General or Amateur Extra respectively when the new rules go into effect on
*April 15, 2000.
*
*The FCC disagreed with the League's suggestion that it undertake a
*restructuring of operating privileges along with licensing restructuring.
*"We believe that in light of ongoing discussions concerning implementation
*of new and more modern communications technologies within the amateur

*service community, we should accord the amateur service community an
*opportunity to complete such discussions and possibly reach a consensus
*regarding implementation of new technologies before we undertake a
*comprehensive restructuring of the amateur service operating privileges
*and frequencies," the FCC said in its Report and Order.
*
*In its amendments to Part 97, the FCC's Report and Order refers to a "Club
*Station Call Sign Administrator," something that does not exist under the
*current rules and which was not explained in the R&O itself. An FCC
*spokesperson said the Commission plans to issue a Public Notice soon to
*explain the program and to solicit qualified entities to serve as call
*sign administrators for club station applications.

Source record: 97555

Greetings,

I would like to know if it is possible to hook up a remote control using the "line" jack.

A friend of mine is a news helicopter photographer and they have a BC9000xlt in the back.. He currently uses 2 foot pedals to transmit on the radios back and forth when shooting.

He would like to know if it's possible to have a foot pedal that when you "press" it would take the scanner out of "scan" mode and put it into "manual" mode.

This way when he hears something, like a shooting or pursuit, he press the pedal and it will stop on that channel.

Thanks in advance!

*is the ONLY passion should be allowed in?
****

This is the elitist good ol boy society thinking. There are those in the service that want to associate with only their kind. It is somewhat of a prejudicial thinking. I have known Extra class lincensee, HAMs, that their sole purpose to get their extra class license was to get away from the novice and general class bands. They talk only in the extra portion. The new ruling now affects that sphere and thus their little minded world has now come crashing down. They have long forgotten that the amature radio service no longer revolves around them. They enjoy paying 2 to 5 thousand dollars for their rigs that should be no more that $600 to $800 max.

****

*probably only about 30 CBers - there used to be over 1000.
****

Must be nice. I live in a county that has almost a 1 million people. And there is a heck of alot more than 30 CBers here. You can still find about 7 to 8 channels busy most of the evenings til 10 PM.

****
*A lot of this loss of growth/shrinkage is due to computers. Young
*people just have other interests now.
****

I agree here on that. The internet is kicking bothe the CB and HAM participation. IN the near future it will even be more of a threat. 1 Gigabit switches are now starting to roll out. In five years the Internet should be clipping along at 10 Gigabits/second. Voice over IP is now a reality. It is scary to think what is coming down the pike in the next 2 or 3 years. We should see 1 Gigahertz PC's by the end of this year.

Has been that way for many years. Te CB band just made it easier to get in touch. Then again if I remeber correctly the service was intended to be used in short range low cost commercial and non-commercial traffic.

While prostitution is not the most desired commercial enterprise and in most states is illegal, never the less it happens

> what's-his-name in San Diego was asked for proof of his credentials
> by this NG long before I was & never responded, I will not post such
> information about myself until he complies with the request of the NG.

What a load of crap, Toilet Boy! You railed Cheek about not having an Amateur or Commercial License in the past. You even went so far as to post your callsign (how come you changed it to KS0F?) and your commercial license number in a feeble attempt to intimidate Cheek and show him up. Now, you have the opportunity to show him up again with your alleged degrees, but instead you wimp out and hide behind this charade.

I said it before and I'll say it again: You have NO degrees. You are a liar and a hypocrite. You, if you have the honesty, can prove me wrong by posting the schools and dates pertaining to those supposed degrees. But you can't because they don't exist. You are just a sad lying little sociopath that nobody, not even your father, cares about.

I saw the picture of you and that bimbo on your web page. I saw her dance at the Acropolis. She still looks just as scummy as ever. Does she still do that thing in the parking lot with the customers?

> I have told Blake that if he wishes to meet me in Dayton sometime I
> will show him one of my degrees, but he has delcined to this offer.

Blake is a smart man. He can tell when somebody (you Toilet Boy) is trying
to blow smoke up his derriere.

You attacked Cheek for having several titles, but now you make the same claims for yourself. You've claimed to work in the two-way radio business, write commercial Internet software, and now claim to be a "Clinical Supervisor of a outpatient treatment facility." You act more like a patient.

I've said it before and I'll say it again: You are a liar and a fraud Toilet Boy!

369. Re: Antenna Choice: Grove or RS?

Newsgroup: rec.radio.scanner

Source record: 97565

I just got the Scantenna from Grove. It was $10 cheaper at RS ($39 vs. $49) and from all I could tell, it's the identical antenna. You can compare them on the Grove site and the Radio Shack site. But I called 8 RS stores in my area and not one had it. I finally asked the 8th guy to check his computer and tell me where one could be had. He said "none available anywhere", and went on to speculate that it has been discontinued for RS. Of course, consider the source - ever met a salesperson at RS that had a clue as to what was going on?
So I bought from Grove. Delivered 2 days later via UPS. Mounted about 25' up. Seems to work well at 800MHz. But strangely enough, it seems lousy at aircraft (120Mhz). I could hear the local tower (12mi away) with the little whip on the scanner (2052) but can't hear the tower with the external Scantenna. I'm speculating that the radio is getting sig overload from local FM broadcast stations when using the external antenna. Which isn't the antenna's fault.

*Why blame the ARRL? I'm not a member, but it seems to me that the FCC took
*the restructuring one step further than the ARRL wanted.
*Didn't the ARRL want 12WPM for Advanced and Extra and 5WPM for General??
*How about four classes instead of three?
****

That requirement was there to satisfy the board members. The resolution that passed the board was 9 to 6 in favor of the July proposal in 1998. The first attempt failed in January of that year. The proposal sent tothe FCC was a compromise from the ARRL board of directors.

Belive me this has been a hotly contested subject for over 20 years and many are dead set on change. The change from actually sending and receiving CW to that of only receiving was hotly debated. ANd when the CW test became just a multiple guess test that even caused more of a stir.

I have been predicting that this action would take place since 1979. I have had my license since 1976.

****
*A lot of you ol'timers out there think that CW=CB with respect to this new
*license structure. IMHO, you're wrong! HF has a serious learning curve when
*it comes to long wires, tuners, grounding, etc... It's not like you plug in
*the mag mount to the HT and start yacking!
*
*I worked really hard to pass the 5WPM code last month and I have been
*working a little 10M here and there. After stringing the longwire, tuning
*the MFJ941, the DSP-9+ and figuring out the Icom 706, HF is a lot of hard
*work! It's so rewarding to make a distant contact after all that...Don't
*forget the price of HF gear. You can buy several HTs for what a
*run-of-the-mill HF radio costs. You really have to want to get on HF. With
*the learning curve and the cost, I don't think it's going to be as bad as
*some of you think.
*
*Oh well, bring on the Extra!
****

Today the amature radio service has now become more of an appliance operation. One does not need a technical background nor an engineering background to become an amature operator. Some have associated that if one can learn 20 WPM that should make them more responsable operators. I appluad your dedication to learning CW. I met the requirements of 5 WPM 24 years ago and passed element 3

in 1977. I chose not to go further simply because I did not see the need and still don't see the need. I have not used my key since about 1979.

As for the new regulations effective date of 4/15/2000, I plan to have a new HF rig that I am now working on. Completely designed and built by myself. Always wanted to. I have all the equiptment and parts assembled to start building.

regards
james

Doctor....since you are interested in listening to 800 mhz frequencies, you should use a low-loss coax, such as Belden 9913, or its equivalent. As for an antenna, you might want to see if you can get your hands on one of those discontinued Rat Shack 20-014 ground planes that covers 25 mhz through 1.3 gigahertz. They are a little gaudy, but work like gangbusters. I know, I have an 895xlt, 9913 coax and a 20-014 mounted 35' up.

Chris

I anyone actually has titles they have earned by a legit authority then
I have no problem with it. No authority gave him the titles he claimed.

To be exact, I claim that I used to work in the two-way radio
field. For that work, I obtained the license commonly required
for such work, the FCC "General Radiotelephone License". Since
that is issued by the government, it is a matter of public record.

I am now a "Clinical Supervisor of a outpatient treatment facility" as
you stated which is in a facility approved by the state & a position
approved by the state. I am also certified/licensed to do such work in
the state.

I have NEVER claimed to "write commercial Internet software".
Either you are wrong, or you are a liar. Which is it?

Want a test? Here, translate ... --- ... from morse to text. I don't think the ITU specifies what the test should cover, nor how difficult it should be.

390. IC-R2 discriminator

Newsgroup: rec.radio.scanner
Date: 2000-01-03 00:00:00 UTC
From: Nick Smeltzer <Nick@greenhse.demon.co.uk>
Message-ID: <RmgGjAARmSc4EwZ+@greenhse.demon.co.uk>
Source record: 97586
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner

Does anyone know if it is possible (and easy) to tap the discriminator output on the IC-R2? I want to know before I buy it but I'm worried with the radio being so small. Where could I take the output to as there is no where to mount a jack?

Tnx,

Nick

How about $15 for four AA cells and a charger, or $10 for four cells
(plus $5 shipping)? By the way, http://www.cheapbatteries.com has
some better prices if you need a larger volume too.
I have absolutely nothing to gain from this post, just passing on a
site that has treated me fairly.

I am a newbie to scanning but I am an informed consumer. I tried to buy a Uniden BC 245XLT from Fry's in Dallas on 12/31/99. I was informed that only 1 was left at a price of $299! I have seen the same model for $250! I did not buy the scanner but did go to Radio Shack for a PRO-91 , recharg. batteries and an AC power supply for under $250. The only drawback thus far is no Erricson trunks.

Radio-Shack Realistic PRO-37 Scanner For Sale.

It's a Top of the Line Portable Scanner that covers UHF and VHF Bands from 30-54 MHz and 108-174 MHz and 380-512 MHz and Cellular 806-960 MHz.

You can program 200 channels into it, and it has direct-entry of frequencies.

It can scan 10 groups of frequencies, one or all, as you wish, or you can enter the frequency manually if you prefer, or choose the frequency you want to hear from the 200 you have entered into it.

It measures 6.5 inches high by 2.75 inches wide by 1.75 inches deep.

It is in As New Perfect Condition, no scratches, and was used only one year.

$199.00 plus shipping.

Contact: bellavance@videotron.ca

I own a R/S Pro-43 and I am looking for an all around decent outdoor antenna. Any information about cable length, mast height etc would be appreciated.

411. APCO-25 Compatible Scanners?

Newsgroup: rec.radio.scanner
Date: 2000-01-03 00:00:00 UTC
From: "Steven G. Bradley" <sbradley@southern.edu>
Message-ID: <38716CDF.710D5286@southern.edu>
Source record: 97607
Body handling: Binary attachment payload not displayed: sbradley.vcf

I recently learned that both Apopka and the Florida Highway Patrol have upgraded their equipment to the new digital APCO-25 compliant Astro radios. These new digital radios appear to not be monitorable with the standard Trunktracker scanners.

So, I went over to the motorola site and researched this out -- based on what I understand it, APCO-25 is a standard or set of standards and they were not created by Motorola, although Motorola is a manufacturer of equipment that is compliant and follows the standards as they were set forth.

Now the question -- is Uniden, the grand-master of following the latest technology in scanner design working on a new scanner design that will be APCO-25 compliant to monitor the latest APCO-25 radios?

I see what appears to be a standard and it does not appear to be limited to specifically Motorola, it looks like anyone can make equipment that conforms to the APCO-25 specifications. This being the case, it should be possible to create a scanner that can monitor the Astro Radios when they are operating in APCO-25 compliant mode, which appears to be the only purpose they were designed for. The purpose of the APCO-25 was a set of standards to allow such radios to talk to any other radio without limitation of frequency or who makes it.

If this is the case -- it should be possible to make a scanning receiver that only receives based on the standards as published. Looks like I know what I want next Christmas, assuming it exists by then.

If there are any specific known details of such developments, please e-mail or post here.

Message-ID: <38716F69.F1EF3D5B@globe-net.net>
Source record: 97609

If you plan on listening from your basement, you should seriously consider using an outside antenna. A Discone antenna (sold at Radio Shack) is a good choice for broad band coverage.

You can modify the PRO-90 to have the backlight stay on continuously or add an external switch. The PRO-90 has the same guts as the BC235XLT. Instructions for this mod (on the 235 radio) are located at this link:

http://www.lcblanton.com/trunked/stuff/light.txt

If you decide you'd like to add a computer interface, read up on one called PROgramit. It allows you to program the memory and control your scanner via your computer. Details can be found at these links:

http://www.qsl.net/ka2pyj/index.html
http://dune.globe-net.net/~rc123/Robert/PROgramit/PROgramit.html

I am getting back into scanning (Radio Shack Pro 2030) and moving to an area where outside antennas are prohibited. Does anyone have a recommendation for an antenna that I could use indoors (attic)?

Agreed, why should an amature (immature being a synonym) derive anything?

Now, how about a radio amateur?

The Motorola "Talkabout" radios are Family Radio Service (FRS) units.

GMRS was originally a Citizens Radio Service. The FRS was created by using some of its channels and splinter channels. GMRS runs higher power, and can use repeaters. FRS is low power and cannot use repeaters. GMRS can use elevated antennas; FRS must use an antenna permanently attached to the radio. GMRS can be mobile and base; FRS is only portable.

Bill..

I tried this, but I can't get the 245 to be in trunk-search and remote
at the same time. It goes to hold when I shift to remote. I wonder what
I am doing wrong..the computer will log on hold (the same ID comes up
every time) and it will log on scan (giving the IDs from my list) Now
how do I get it to log in search??

Bob

Negative. The scanner stops on a transmission and the PC starts a file based on the fact that Winscan knows that squelch was broken because scanning stopped. Without sending the scanner output somehow to the PC you get a file with no audio information. For example if you record a WAV file on your PC with no MIC or LINE input, you get a blank file. Same holds true here.

BTW I own the 245 and WinScan and I've used this feature. No input to sound card = no sound. WAV file, yes but no sound.

Yup, some maintain that the Gregorian calendar was off by three or four years, so that means that the millenium came and went around '96 or 97. So what's the point of being a stickler when the starting point is argueable?

Know what I mean Vern?

431. Best modern alternative to pro-2006?

I'm selling my Pro-2006 in the next few days, and will be replacing it sometime in the next couple of months. My question is, what is the most widely regarded modern "successor" to this scanner, from any of the companies out there? I'd like to get something with plenty of features, and possibly trunking (which I guess most modern scanners can handle), for under $400 or so, and a built-in computer interface would be a big plus.

Suggestions? Comments? Please let me know, either on here, or via email to mrbill@mrbill.net.

Thanks.

Bill

432. RADIO SHACK BUYERS BEWARE ...

Newsgroup: rec.radio.scanner
Date: 2000-01-03 00:00:00 UTC
From: Bruce Bates <bbates@brucebates.com>
Message-ID: <38703C20.3A094DB9@brucebates.com>
Source record: 97656

Radio Shack is experiencing a shortage in components and is packaging
and selling their brand name equipment without all of the necessary
components...

In December of 1999 I purchased a Radio Shack 4-channel security monitor
(#49-2511) from my local Radio Shack. Upon opening the package at my
office I discovered that the product only contained 2 monitor cables (4
cables are necessary to complete the 4-channel system). No where on the
box does it state that the product requires 2 additional cables to
complete the 4-channel system.

I was told that I could purchase the 2 additional cables (#12216750) at
my local Radio Shack for an additional $13.89 each, but when I tried to
do so I was told that they do not have them in stock... in fact, I was
told no Radio Shack in America has them in stock.

Upon calling Tandy customer service the local Radio Shack clerk was told
that I could order the cables from their warehouse, which I promptly
did.

When the cables did not arrive within the 7-10 days that I was told, I
called Tandy customer service to find out why they were delayed... I was
told that the necessary cables are NOT EVEN IN STOCK AT THEIR
WAREHOUSES, and that the cables would be shipped whenever The Tandy
Corporation receives them, which, I was told, will not be until sometime
near the end of February, 2000.

The $800 worth of equipment that I purchased from RADIO SHACK in
December of 1999 is useless to me without the two cables that are
necessary to make the 4-channel security monitor function as a 4-channel
security monitor.

RADIO SHACK BUYERS BEWARE ...
Radio Shack is experiencing a shortage in components and is packaging
and selling their brand name equipment without all of the necessary
components.

Mea culpa. I should have looked at my info first before spouting off. The PRO-94 does indeed track Motorola (using the subaudible low-speed handshake) and EDACS (using the control channel). It does not track LTR trunking, while the PRO-92 does all three.

Sorry for the confusion.

I have an R2 ordered. The dealer sold me some NiMH's and said they will
charge ok in
the R2 charger. Can anyone confirm this? Tnx.

Bill

I note you go on about knowledge when wht is being done it
remove not a matter of knowledge not of physhical skill. Code testing
has nothing what you just mentioned. which are good things, likely to
be discarded by the FCC reacting to the Morse Code uber Alles crowd
>

Indeed well spoken, and in it's defense maybe it is not so
elist. It does serves to purpose of keeping each test a bit smaller.
personal yeah I'd prefer one test one class but I not sure I'd want to
see the resulting question pool

>years away)

Sorry the treaty has no such requirement merely that code be tested
for "by ear" and "by hand" the first of those requirements is NOT meet
by the US in the case of at least some of the Deaf. The FCC could have
with a big strech (like the ARRL's no test at all for HF CW access
idea) given a written test of some sort, or 1 char per sec test one
sec long, answer is known in advance if they had pleased. Thier are
reasons to keep 5PM as much as I would have liked to see the FCC
eliminate the requiremnt in practical terms as these sugestion would
have done. But I not am really surprised by what the FCC did

Indeed I belief Ed Metzger my director is wrong in suporting
Code requirements but I do firmly believe that the idea of as much
Code requirement as is politicaly possible is ARRL policy. It is
different from trying to Go down with the ship (all of the ARS) on the
issue of code, but it remians in favor of code testing requirement

Great on the Lith-ion batteries. Now how do I get from 3.6 volts to 4.8
used in my 245??? The are sure potent buggers with 3.6 volts and 2200mah
in an AA size..

No, the fines go into the general fund and are not allocated to support
FCC activities. Wish they were. Even more significant is the $billion/yr
the FCC gets in station licenses and frequency auctions also is gone and
not used to support the FCC. This may be an area where a few thousand
letters might help. Let the FCC keep some of its "earnings".

Heck, 2000 is "the turn of the century" so let's just party all year long,
OK? I'll give you that the new millennium hasn't started yet, but
1999->2000 just seems so much more impressive than 2000->2001. As the
actual date is uncertain because of historical inaccuracy and calendar
changes, I don't think I'll bother with actual millennium celebrations much.

The R2 charger is a trickle charger, and should work fine with NiMH
cells. You'll need to extend the charging time proportionally.
The NiCds that come with the R2 are 700 mAh, so if your NiMH cells
are 1400 mAh it will take twice as long to charge them as Icom
recommends. (Actually a bit more than twice as long, because charging
becomes less efficient at longer charge times).

Most interesting, thank you for the tip -- I am usually careful about Radio Shack, the only items I buy there are Police Calls (once a year) and parts (components to repair something).

I assume you have used the 30 day return period to return the goods -- since they were not as ordered. Does it have a packing list at all? Of course, while ethically bad, you could buy another one, take out the cables and return it as "missing components" (the problem you have with the first one), this will give you the four cables to use the original equipment as it was intended and give Radio Shack non-saleable return stock until they can finally obtain the cables. It would teach the a lesson to not sell items when parts are not available as it can result in the item not selling on their shelf instead of sitting on a customer's shelf waiting for delivery of the "rest of the stuff" it was supposed to come with. Best of luck. You may want to file a complaint with your local Better Business Bureau and also the BBB office for Fort Worth, TX, as what you have said sounds like they intentionally did not include everything needed with the product (misrepresentation is something the BBB maintains files on).

>in an AA size..

Forget it. Lithium ion cells reqire special circuitry for charge *and*
discharge. You can't just use them in devices designed for alkaline,
NiCd, or NiMH cells, which don't require much special care.

If you over-discharge a LiIon cell, just once, it is permanently damaged.
To avoid this, LiIon packs apparently monitor the voltage of each cell
individually, not the voltage of the whole pack.

If you overcharge a LiIon cell, you plate metallic lithium out inside
the cells. Lithium spontaneously bursts into flame on contact with
air (water too, I think) so you have created a significant risk of
fire. To avoid this, LiIon chargers monitor cell voltages, and they
do *not* "trickle charge" the cells at the end of fast charging.

Again, forget it, unless you're prepared to design and build this
electronic battery support equipment.

Dave;

If my memory hasn't failed me, I seem to recall that one of the wires in a connector on the main board might be not making connection. Open up the scanner, and use a small object to seat each wire in it's connector.

Hope this helps solve your problem.

Let's see what's wrong with this statement......

First, you make an assumption that those of us that do not hold CW up to
the same reverance as you do, are somehow "idiots". Then you make an
even more radical ASSUMPTION, that these same people are going to
somehow ruin ham radio.

Based on what? Where is your proof?

You are exactly the type of close minded ham radio bigot, that I was
refering to.

If you can't keep to the issues without letting your runaway emotion
cloud whatever logic you may posses, then you'll never progress beyond
your initial prejudice.

> Code requirement as is politicaly possible is ARRL policy.

That is exactly what the ARRL's "compromise" proposal was ...
as many classes of license and as much code as they thought
stood a snowball's chance in hell of getting throught the FCC.

They guessed wrong.

The R&O almost exactly reflects the NCI proposal (T/G/E, 0/5/5),
with the only thing of any note that we asked for that we didn't get
being the "sunset clause" and that's not that big a deal since it wouldn't
have "kicked in" until after the WRC deletes S25.5

> It is different from trying to Go down with the ship (all of the ARS) on
the
> issue of code, but it remians in favor of code testing requirement

That is why I stated in a recent post that this is a (somewhat) different
ARRL than existed at the time we lost 220-222 MHz. That ARRL
took an "over our dead bodies" attitude with the FCC and we all
paid for it. I'm glad the current ARRL BoD is a bit more flexible.

Hey, Rick! THANKS - I will give it a try.
Yes, I now have seven repeaters programmed, and have heard quite a bit
of activity on .52 simplex - was at the mall, and listened to a couple
of fellows who were there, I presume, on an FRS frequencies - gave their
callsigns, I'm guessing, just for the heck of it.

Also, have been listening for the 185th with some great success!
Life is *good*...

468. Antenna Choice: Grove or RS?

Newsgroup: rec.radio.scanner
Date: 2000-01-03 00:00:00 UTC
From: crippel@erols.com
Message-ID: <3873c1d4.2915008@news.erols.com>
Source record: 97692

I am looking for a antenna with reasonable coverage for my Icom R7000.

In my situation, the ANT-7, Scantenna from Antennacraft would mount conveniently in the space available. So I ordered it from Grove.

What I received was an ANT-1 scanner beam. Called back, got an RA with assurances that the correct item would be shipped.

It never happened.

I noticed that Radio Shack has a like item in their model 20-044. I have heard that RS antennas leave something to be desired in construction but most likely, they are purchasing the Antennacraft model and simply re-packaging it. Don't know for sure, but thats my guess.

My questions to the group:

I am interested in frequencies between 40 and say.... 950 mhz. Is this type of antenna a good choice ?
Alternate suggestions ?

Know that a discone simply won't mount where I want to install the scanner antenna.

What about the RS model ? Anyone try it ?

Any alternative source for the Scantenna besides Grove?

Tnx es 73

Good luck in your dealing with Sunn Battery. While they've had a fair rep in the past, check their eBay feedback (user: ptron1), They've got a growing amount of disatisfied customers. It seems they like to sell items that are not in stock. Then they try bait and switch, and failing that send cheaper quality items and hope it slides past the buyer. I'm not thrilled with them as I'm one of the growing number they've screwed, and they were pretty ignorant when confronted too.

Bud,

True, the ITU is not a U.S. Government agency, HOWEVER, the U.S. has
signed and ratified the treaty that makes the U.S. a member of the
ITU. Therefore, according to the Constitution, ITU regulations have
the same force and effect as U.S. statutes. That being the case, the
FCC is bound to follow those rules.

As to the second part - how does one determine code proficiency
except by a test?

Regards,
Bill Bowen

The ITU accords are TREATIES, which are indeed US 'Law', when we've agreed
to them.

That said, last I heard, the ITU treaty merely requires morse 'proficiency'
to be demonstrated, not a particular speed. If the FCC cared to do so, they
could have you take a test where you just had to write down the morse
equivilents of each character, not demonstrate receive ability, etc.

Some nations have already ignored that particular rule, and I believe the
treaty allows individual nations to do so if they choose to.

And have you looked at the cost, Harris? To do what you are talking
about costs thousands of dollars for the computer, high speed modem,
access charges, and other items. A radio with this capability can be
had for considerable less.

The internet is not a direct threat to radio. Both CB and ham radio
are alive and kicking fifteen years after online services became popular.

What is a threat is the attitudes of the people. And, in my opinion,
the internet is the direct driving force behind the negative, smartass,
in-your-face, attitudes we see throughout our society today.

It is those attitudes that are driving people away from each other.
And that will happen on radio as these attitudes start to appear there
(it is already happening in many areas on the CB - younger kids with
these attitudes are driving away the older operators).

I would guess right at 400 bucks if it is the full blown 456 and not the lite version. That would in my estimation put the scanner at 250 and the opto board at 150. I've seen them bring around 500 on ebay many times. Just my opinion!

479. Old Radio Shack PRO-2011 loses frequencies. Normal?

Newsgroup: rec.radio.scanner
Date: 2000-01-04 00:00:00 UTC
From: Bryan Costin <bcostin@clark.net>
Message-ID: <qQyc4.23600$W2.266342@iad-read.news.verio.net>
Source record: 97395

I was cleaning out the closet and came across my old Radio shack Pro-2011 scanner, an older, twenty channel base model.

I cleaned off the dust and grime and it seems to work just fine. Except, perhaps, for one thing: if you unplug it, even for just a second, you lose all of the programmed frequencies. I can't remember if I had that problem back when I was actually using it. So, is this normal behavior, or is there a dead battery or something that I could replace? I guess I can keep it plugged into my old UPS, but that kind limits where I can keep it. Thanks!

I am having difficulty programming the WJ-2-24G bandpass filter/RF Atennuator. It seems that the local field strength for an adjacent system causing IMD is so strong that it lies outside of the ability of the software to filter, i.e., we can't enter the large values that we feel we need. Also when the scanner is set to it's lowest quell time it doesn't lock on frequency fast enough with the larger values and part of the conversation is lost. Any suggestions?

No, these attitudes did not start showing up on a widespread basis
until the mid-eighties - just about the time that online services became
popular. These attutides did not exist in public on a widespread basis
in the sixties, seventies, or early eighties. More importantly, many of
those people in the mid-eighties, with these attitudes, were heavy
online service users.

Now, perhaps you are right that these attitudes already existed in the
minds of the people before the popularity of online services. But
regardless of whether online services caused these attitudes, or online
services only made these attitudes seem more acceptable to display in
public, the end result is the same.

There are three "IMSX.DAT" files in the PARMS directory. I don't know the highest number for X but copy the file with the highest number to IMS.DAT. See what that does for you. You can set these up yourself if you have patience. But the system has to be off line.

There is a physical limitation to what it can do. You may have to purchase another cx.

Contact me privately if you need more info. Are you trying to hear above 12?

It is fairly easy to tie up eBay. Just bid. If you are high bidder, say for $100, then bid $101,102,103,104,105..etc just as fast as you can, tying up the bidding and with the proxie bidding, your real bid doesn't change, as you cant rais ypur own real bid, it is still $100. All you are doing is raising your maximum. (and tying up your computer for the last 10 minutes or so.)
I am a serious ebay bidder and seller. I bid in the last three hours and I bid what I think the item is worth to me. One bid. If it gets sniped in the last minute, so what. I had bid what I would pay. With eBay there is always another one. It isn't ebay that is at fault, it is the auction fever thing that you get wrapped up in bidding and forget the value in the heat of the competition. On the selling side, I wish for two "gotta-have-its" that will bid the thing out of reality. I have sold an off the shelf Sears tool for 20% more than the regular Sears price on an item that is in every Sears store. It's great to be on the winning side once in a while.

Well, I have used my computer to TALK to a guy in Austrailia and another in Rome (and countless others in the US).

When I say talk, I mean talk - not type. Works EXACTALLY like any rig. Talk - listen - talk. OR, if you have a full duplex sound card on both ends, you can use it just like a telephone.

as far as I can tell it (The internet)has already turned into an unreliable cesspool.Half the "Information" is outright false and the other half you just aren't sure about!
I agree that the fun in radio is the unexpected opening of bands and getting that special contact.
I have never nor will be a "Ham" ,but I have been DXing for 20 of my 35 years and I still have to rely on the weather and propogation to get some unique loggings.

Hi,
Is there any free/share ware for cloning the VR500 to/from a PC. I
know there is ADMS3 but I don't want the interface (I already have a
multiradio unit) I just want some software.

If not, does anyone know how to communicate with the VR500. I have tried
TX Clone into the PC via I/F but cannot get even a single byte of data.
I am assuming that the unit has a standard 1/8" stereo jack and that
data is IN/OUT on the centre pin. I have also presumed comms to be
9600,N,8,1 but have tried various other settings to no avail.

Regards,
Andy.

> that confirm this)

Good. I'm glad you caught on to my mistake before getting too far. :-)

The PRO-92 has some features that the PRO-94 lacks. One is the ability to track LTR trunking (although I think "track" is a misnomer for what the scanner does), which may or may not be of any importance in your area. As you say, you're mainly interested in EDACS...

You should still consider the fact that the '94 does not have a computer control interface. Also, I +think+ the two units differ in their weather alerting capabilities (of course, the BC-245 has none at all), but given the fact that the weather alert feature is not all it's cracked up to be, I wouldn't let this be a show-stopper.

> Not always, sometimes the RS price is the same :)

Only during a sale. Here's my personal experience with the PRO-92:

I bought mine from Grove for a total of $341.95 including the $12 shipping fee. The unit lists and sells at Radio Shack for $349.95, plus sales tax. There is no question that I saved money no matter how you slice the costs.

> > This feature is not on any of the competing models (I exclude the PRO-
> 94
> > because of your need for EDACS tracking).
>
> ?? Fromt his reply it sounds as if yout hink the pro 94 has alpha
> tagging.. and it doesn't. Please correct me if I am wrong.

Actually, I wasn't sure whether the PRO-94 had it. Because I believed the '94 to be incapable of EDACS tracking, I stated the above disclaimer. If the PRO-94 has no alpha tagging, then the PRO-92 is the only competitor in that field.

> But can it be changed? A lot of times I'll hit 'manual' to stop on a
> channel that I'm interested in hearing.

So far, nobody has found a fix for it. This is, IMO, one of the PRO-92's actual design flaws, not just a complaint about the unit working the way it's supposed to work.

> Thanks for the clarification- this is the most comprehensive
> explanation I've been able to find so far BTW.

Thanks, but I can't take all of the credit for the information. The TRUNKCOM and T2 mailing lists, and the Trunking Board at Rich Wells' Strong Signals website have been excellent sources of solid information, with less junk to sort through than is typically found in the newsgroups.

> I assume we're talking about some kind of 'trunking priority' and not a
> 'priority channel' in the conventional sense.

Right. Priority talkgroups or subfleets, rather than frequencies.

> important that the scanner handle this information properly. However,
> I guess this is a moot point in this case because it applies only to
> Motorola systems (right?). Further, it seems that, while this may be
> at the root of the Pro-92's problems, the pro-94 and BC245, since they
> do not make use of the subaudible data, are unable to implement this
> 'priority' feature either.

Not exactly. First off, there is such a thing as "priority" trunking available on some non-Motorola systems. I don't know myself whether it's done the same way as Motorola does it.

Second, the BC-245 actually does allow priority scanning of talkgroups in a scanlist, so use of the priority feature is possible without the subaudible handshaking, but the implementation is not the same as Motorola's own way of doing it.

> Are there any systems where data transmissions (not the trunking system
> data channel, but MDTs, pagers, etc) are *not* confined to specific
> talkgroups? I.E. if the town PD is talk group 06-666, will that group
> carry both their voice and MDT transmissions? Or are voice/data always
> carried on seperate talkgroups?

They'd be on separate groups, because the users would have the same problem - how do they avoid listening to the MDT buzzsaw noise if they have to monitor the talkgroup for voice traffic?

> How many does the 92 have? And how are these channels handled with
> respect to trunking? Is it just one frequency per channel just like
> conventional scanners? Is there a limit to the number of frequencies
> per trunked 'system' that any of these scanners can handle? Is there a
> limit to the number of talkgroups that any of these scanners can handle?

The PRO-92 has 500 channels, divided into 10 banks of 50. The only hard limitation to trunking with the PRO-92 is that EDACS systems have to be in their own separate banks, and the first channel in the system has to be on x01, not x00 where the bank actually starts. (It would be easier if they had designed the scanner to start counting with channel 1 like all other scanners.)

Multiple Motorola or multiple LTR systems can be combined, but other limitations (number of lockouts per bank and number of talkgroups in a scanlist per bank) make it impractical to combine too many systems, especially if they are dissimilar in some way.

For example, if you want to scan a Type II system and a Type I system, or two Type I systems with different fleetmaps, they will have to be in separate banks because trunked configuration info is global to the whole bank. Also, if one of your systems uses talkgroup 1680 (as an example) for MDT data, and another uses the same numbered talkgroup for high priority voice conversations, you will have an obvious problem while monitoring both systems using the same scanlist.

Another point about trunking with the PRO-92 - it is an outstanding trunking detector. If you hear voice communications on some frequency, you can quickly run through the decode/detect modes while a signal is present and find out whether the signal is conventional with CTCSS or DCS, or if it's Motorola or LTR trunked and what talkgroup it's on. I'm not sure what happens when you encounter an EDACS signal because there are no EDACS systems close enough for me to monitor regularly. (Moto Type I is still difficult to deal with compared to Type II, but the only "easy" solution to a Type I system is a computer running Trunker and a lot of time monitoring and analyzing the system.)

> Interesting to know. You seem to be in the unique position to answer
> my question- are most of the systems in the Ulster county area Edacs?

Both of the systems in Ulster County of which I am aware are EDACS. Surrounding counties have a mix of EDACS and Motorola, and a mix of Motorola types.

> > That's backward. The PRO-92 has the port and the expensive cable.
> The
> > PRO-94 has no computer interface capability.
>
> Are you sure?

Absolutely. I own a pair of PRO-92s.

> I thought I remembered seeing a posting about a '$69.95 cable and
> software package for the pro-94' and even if you are right and I have
> this mixed up with the 92, then there is at least that software that
> comes with the interface. What is it capable of doing?

Unknown. Nobody has been able to obtain a copy and Radio Shack isn't talking.

> So it would seem that this delay is not something that you would run
> into very often. It would only be a problem in your initial "figuring
> out which service is on what talkgroup" phase of figuring out your
> local system.

Yes, and only if you try to "figure out" multiple systems at the same time. If you search one at a time, the delay "problem" is not an issue. Searching

multiple unknown trunked systems at once seems to be adding too much potential confusion to a difficult (for a beginner) task.

> On an unrelated topic- I'm surprised that there have been no computer
> programs that offer digital to analog conversion of digital audio
> transmission formats. Long before trunktracking scanners came out I
> saw freeware programs that could at least decode the control channel.

Realtime decoding of digital voice signals requires some computer horsepower that has only recently become available to the hobbyist at affordable prices.

> Thanks for all of the information in this posting- I've found it very
> valuable.

Glad to be of service.

Just don't confuse "digital" with "encrypted" - they aren't always the same.

Absolutely brand new unopened plastic, excess result of a group
purchase.

0.1-2000MHz, less cellular (not modable)
triple-conversion
AM/NFM/WFM/SSB
large "wedge" S-meter
Channel Scope with 40 channel span
LCD display including alpha tags
computer controllable (optional cable/software not included)
drop in charger
nicad battery pack
BNC antenna

will take 12 VDC adapter (not included)

currently $389 NEW please see http://www.grove-ent.com/WBR2.html

$325 shipped UPS Ground in cont. US
```

If you live 20 miles from the airport, it should be very difficult or rearly impossible to listen to the tower with a rubber duck. However, you should be able to copy most airborn traffic with a problem. Aircraft radios transmit 50 watts max. With some altitude, this is enough to hear from your location. A "better" rubber duck or whip will not make that much difference in reception. I would definitely use an outside antenna. Good luck.

There is more historical evidence to support the claims of
Jesus Christ than there is that Abraham Lincoln was president of
the United States....

Just because you choose to NOT believe in Him, does not
make him any less God...Just like someone who has CANCER
chooses to believe that they DONT have cancer make them
CANCER FREE...

16 "For God so loved the world that he gave his only Son, so that everyone
who believes in him will not perish but have eternal life. 17 God did not
send his Son into the world to condemn it, but to save it.
Holy Bible, New Living Translation, (Wheaton, IL: Tyndale House Publishers,
Inc.) 1996.

The Bible says you are ALREADY CONDEMNED my friend...
John 3:18 "There is no judgment awaiting those who trust him. But those who
do not trust him HAVE ALREADY BEEN JUDGED for not believing in the only Son
of God. 19 Their judgment is based on this fact: The light from heaven came
into the world, but they loved the darkness more than the light, for their
actions were evil. 20 They hate the light because they want to sin in the
darkness. They stay away from the light for fear their sins will be exposed
and they will be punished.
Holy Bible, New Living Translation, (Wheaton, IL: Tyndale House Publishers,
Inc.) 1996.

All you have to look forward to is a ETERNITY in hell...

Revelation 21:11 And I saw a great white throne, and I saw the one who was
sitting on it. The earth and sky fled from his presence, but they found no
place to hide. 12 I saw the dead, both great and small, standing before God'
s throne. And the books were opened, including the Book of Life. And the
dead were judged according to the things written in the books, according to
what they had done. 13 The sea gave up the dead in it, and death and the
grave gave up the dead in them. They were all judged according to their

deeds. 14 And death and the grave were thrown into the lake of fire. This is
the second death-the lake of fire. 15 And anyone whose name was not found
recorded in the Book of Life was thrown into the lake of fire.
Holy Bible, New Living Translation, (Wheaton, IL: Tyndale House Publishers,
Inc.) 1996.

Here's the GOOD NEWS...you don't have to go to hell,
YOU CHOOSE to go there YOURSELF by rejecting God.

Listed herein are 5 things God wants you to know and believe in your heart.
If
you value your soul in the light of eternity, please read and consider
them.
I. You Must Know That You Are Lost

Only those who honestly admit in their heart they are lost, will be
saved. As one must
first realize his sick condition before going to or calling a
physician, so you must first
realize your lost condition before you will truly desire a Savior. You,
as a lost person,
occupy dangerous ground. Notice God's supernatural view of ALL lost
mankind,
which, of course, includes you.

- Wandered from God--Isa. 53:6; Rom. 3:11b and Rom. 3:12a.
- Guilty before God--Rom. 3:19.
- Ungodly before God--Rom. 5:6, no regard for God in all things they
do.
- Condemned before God--John 3:18; Rom. 5:18.
- Rebels before God--Rom. 1:32.
- Spiritually dead before God--Eph. 2:1; John 5:24; n Cor. 5:14.
- Enemies of God--Rom. 5:10; Col. 1:21.
- Sinners before God--Rom. 3:23; Rom. 5:8.

My friend, are you willing to admit in your heart before God, that He
speaks the truth
about you? You MUST in order to be saved. Only those who see themselves
as God
sees them, will ever be saved.
II. You Must Know That Your Own Works Cannot
Save You

Salvation is the gift of God. If man could save himself by works why
then did Christ have to suffer and die for him? Christ performed all
the "work" needed for our salvation, we cannot perform any of our own
to attain salvation. Notice why man is completely helpless to attain
salvation by his own merits:

- No "righteousness" of our own -- Rom. 3:10-12; Isa. 64:6.
- No "strength" of our own -- Rom. 5:6; Eph. 2:1.
- No "good" of our own -- Rom. 3:12; Psa. 14:1-3; Jer. 13:23.

• No "boasting" from us in salvation -- Eph. 2:9; Rom. 3:27a.
• No "works" from us in salvation -- Eph. 2:9; Titus 3:5; Rom. 4:5.
• Salvation is a "gift" -- Eph. 2:8-9.
• Righteousness is a "gift" -- Rom. 5:17.
• Eternal Life is a "gift" -- Rom. 6:23b.

The above is a death blow to man's pride; but are you willing to swallow your pride and admit in your heart, that God spoke the truth and that you accept it? You MUST in order to be saved.

III. You Must Know That To Die As A Lost Person Is To Spend Eternity In The Lake Of Fire

Both the saved and the lost die physically, but the lost person will suffer the "second death" in the Lake of Fire, Rev.20:14. As the saved will spend eternity in bliss with God, so the lost will spend eternity in torment and away from God. Notice the position of a lost person:

• The wrath of God is ON HIM NOW -- John 3:16.
• He is CONDEMNED ALREADY -- John 3:18b.
• Called "children of wrath" -- Eph. 2:3.
• The Wrath of God will be literally upon the lost at the Great White Throne Judgment -- Rev. 20:15.
• This Wrath is for eternity, forever -- Rev. 14:11.

Man does not like to think of any future punishment because of his sins but it is true just the same, just as true as God Himself. Will you accept the fact that God is just in sending the lost to eternal damnation? Please agree with God in this because THIS is what you need to be saved from.

IV. You Must Know That Jesus Christ Is The Only Savior

The job of a Savior is to save, and this, Christ can do. He died on the cross to bear your sins, your shame, your guilt, your penalty. He is your substitute. What you so justly deserve, because of your lost, sinful condition, He gladly bore for you. This is WHY He came into the world, "to save sinners," I Tim. 1:15. The "work" has been accomplished on Calvary's cross.

Notice what His death or blood does for us:

- Washes us from our sins -- Rev. 1:5.
- Redeems us -- I Pet. 1:18-19.
- Justifies us -- Rom. 5:9.
- Forgives us -- Eph. 1:7.
- Reconciles us back to God -- Col. 1:20.
- Peace for us with God -- Col. 1:20.
- Propitiates (satisfies) God -- Rom. 3:25.

There is no hope outside of Christ and His Death for:

- He is the only way back to God -- John 14:6.
- He is the only DOOR to enter to be saved -- John 10:9.
- His is the only NAME to obtain deliverance from hell -- Acts 4:12.

Friend, cast away all other so-called Saviors. God's Word only has one, the Lord
Jesus Christ. Admit this in your heart to be true. You must in order to be saved.
V. You Must Know That You Must Come To Christ And Have Him As Your Own

Now, you could know the 4 previously mentioned truths and still be lost! You must
now claim Christ as your own Saviour; you must receive Him as your own Saviour;
you as an individual, must believe on the Lord Jesus Christ, trust Him and Him alone,
and "thou shalt be saved," Acts 16:31. It is a personal faith in a personal Christ
before you can have a personal salvation. As food must be eaten in order to take
away hunger, and medicine must be taken in order to take away disease, even so you
must lay hold on Christ by your faith in order for Him to take away your guilt and
condemnation.

When the Bible tells us to "trust in Christ," Eph. 1:12, it means to rely completely on
Him, not Him and something else. Suppose a wife told a woman friend of hers, "I love
my husband and trust him, but just in case, I've hired a detective to follow him." Is
this trust? Certainly not, and yet, to say you trust Christ for your salvation but "just in
case," you want to hold on to your own so-called righteous works, this is not trust in
Christ. This would make Christ a "half-savior." He alone must save or not at all. Christ
said: "Him that cometh unto me, I will in no wise cast out," John 6:37, nor bring "into
judgment," John 5:24, but "hath everlasting life. " John 6:47.

The moment you accept Him as Savior, God will forgive you and cleanse you and make you a child of His. Believe God's Word that He will do as He has promised. Will you do it today? Death is in the pot. "What must I do to be saved? And they said, believe on the Lord Jesus Christ, and thou shalt be saved," Acts 16:30-31. Do likewise and "thou shalt be saved."

My friend, have you understood what you have read in this tract? It boils down to this. The Lord Jesus Christ, who was God in the flesh, came into this world to die in the place and stead of sinners. His was a substitutionary death. You must believe this includes you, that He did it for you, in your behalf. Now, rest yourself completely in Him; trust in Him to save you as He has promised; rely wholly in Him alone to do the job of saving you from eternal damnation. Believe in Him this very moment as your own personal Savior, and the work is done! You are now saved with an everlasting salvation.

Say this simple prayer with all your heart, and you will be saved!

Dear God,

I know that I am a sinner and need your forgiveness. I believe that Christ died in my place, paying the penalty for my sin. I am willing to turn from my sin. I now invite Jesus Christ to come into my heart and life as my personal Savior. I am willing, by your help, to follow and obey Christ as the Lord of my life. Amen.

If you just accepted Jesus as your savior...please email me and let me know...
romans10-9@hawaii.rr.com

ASSURANCE OF SALVATION:

Jesus has given us many precious promises in His Word. The Bible says that claiming these promises by faith makes us partakers of the divine nature NOW (2 Peter 1:4). It is impossible to believe these magnificent promises and not have assurance now. That is why Jesus gave them to us. Following is a list of twenty blessed promises. There are many more just as clear.

1. He will keep you from falling, Jude 24
2. Judgement will be given to (or in favor of) the saints, Daniel 7:22
3. He leads you in paths of righteousness, Psalm 23:3
4. He gives you victory now, 1 Corinthians 15: 57
5. He which started a good work in you will complete it, Philippians 1:6.
6. Jesus is your attorney, 1John 2:1
7. The Father also loves you John 16:27
8. He promises forgiveness and cleansing from sin daily, 1 John 1:9
9. He forgets your sin and iniquity, Hebrews 8: 12
10. Jesus assures you and asks that you be bold, Hebrews 10:19-22
11. He promises to confess you before His angels, Revelation 3:5
12. Overcoming is promised by His blood, Revelation 12:11
13. He offers you the wedding garment, (His righteousness) free, Matthew 22:11)
14. No one takes you out of His hand, John 10:29
15. If you believe on Him you cannot be condemned, John 5:24
16. He always causes you to triumph, 2 Corinthians 2:14
17. Jesus does the miracle-working needed in you, Romans 8:3,4
18. With Him everything is possible for you, Mark 10:27
19. He promises to take your worries, 1 Peter 5:7
20. If you are willing to follow Him, He accepts you, as you are, 2 Corinthians 8:12.

515. Re: Will there ever be a digital scanner?

Newsgroup: rec.radio.scanner

Hear Ye! Hear Ye!

It is the end of scanning! Those dastardly folks at motarola has created a trunked radio that can not be scanned by anyone. You wont be able to scan police and fire operations. You might as well get another hobby as you wont be able to scan the new 800 service.

Hear Ye! Hear Ye!
Yes children you can not scan the ericson trunking system with your new uniden trunk tracker.

Both lines were true a little while ago, and are not no longer. My TT scans my fire and police services, (I don't have a need to do ericson but I hear uniden has come out with one.) The point is give it a while and some one will figure out how to scan digitized radio signals.

Regards,
Bill Carty
(please note I am using my real name, not a handle!)

Are you a police officer, or are you just buying whatever the news media
say?

> Instead of crime rates actually falling, I think cities are just not
> reporting crimes, or reporting the crimes as less serious offenses.
> Perhaps they are doing this in an effort to attract people to the
> cities. Or perhaps they are doing it to show that all their new
> "anti-crime" laws are working. Or perhaps even the police officers
> themselves are doing it to prove how well their department is doing its
job.

Those are faint but real possibilities. Philadelphia is one city that has
been "caught" underreporting crime to the FBI. However, the laundry list
above also sounds like conspiracy theorizing. What do YOU think is
happening, and why? (It might be better to continue a criminal justice
discussion in email, since this really has nothing to do with radio scanning
or ham radio.)

> This is likely caused by many larger cities simply not pressing charges
> if the suspect agrees to leave town.

Wow! Where did you come up with that accusation? Any evidence or facts to
back it up? Sounds like more media speculation.

> Whatever the case, I certainly don't feel any safer on the streets
> today than I did ten years ago. And, if I lived in a smaller town, I
> would be very concerned about some of the new people moving into town.

Most people don't, depite some provable numbers that show the general
impression to be mistaken. Again, people are being fed a lot of crap by the
media and have no real reason to disbelieve any of it, because actual study
and research involve some effort.

This debate is interesting. I am a ham radio operator, have been since the adoption of the no code tech license. I had tried for years and years to study code and could never quite get it. This is listening to the code tapes for several weeks before giving it up each time as it wasn't sinking in. This was also using computer program that taught it too. What I think is missing is not that the Code is going away. (oh by the way in the mid 1990 us coast guard stations no longer required their station to have a CW qualified operator on the radio, as commercial high seas ships are no longer required to have a CW qualified radio operator on board). What everyone should be focusing on is the theory! I haven't picked up a study exam since I got my license a few years back, but some of the theory required to pass the test is simple, and yet, I couldn't build a radio from what I learned in the study text. The technology has changed to the point that many hams can not repair even a simple antenna connection on their radios.

Between surface mount technologies, digital circuits that process radio signals into audio. Circuit boards the size of a small deck of cards the examine text doesn't come anywhere near allowing a newly licensed ham to work on his own gear.

We should be worrying about a dinosaur like the code, but how to make the examinations reflect reality and what is really going on in the real world.

A quick question to those of you bemoaning the loss of the code, can any of you build a 20 amp power supply to power your mobile radio?

Think it through. This is one of the most fundamental things we do as a ham operator, power our equipment. With out power, no radio transmission.

Okay off my soap box....almost....Those who want to get back to eaves dropping, and who think this conversation/discussion is inappropriate here, should think about the fact that many ham radio operator got their start listening to both short wave, and scanner, listening to hams, and others on their equipment.

Bob,

Not sure what the + and - mean. The plus seems to indicate that the remote function on the scanner has been activated.

You CAN send commands to the scanner and somewhat control your radio through hyperterminal. A list of commands can be found here:

www.accesscom.com/~gsellani/

Once again, do NOT send AC <cr> unless you want to clear all your memories.

That isn't totally true.

It has been proven that you can put a graphic with a link in an email, and have it go to any url that you want.

At that point, you can load any HTML or DHTML and have it execute arbitrary code on the users machine.

Toll Free

Well, I've said it once, and I'll say it again...

Buyers on EBay are nuts, and we on the radio groups are even crazier
for not joining the lunacy!

Lemme explain...

Just was on Ebay and saw a Pro-43 for sale. It is un-modified, but of
the type that can be modified, and yes, the scanner seems to be in
very good, near mint condition.

It is currenty bid for at $405.00!!!!! WOW!!!!! and there are
still 4 days left on the auction. Unreal.

Like a fool, all these years I've been selling my mint, or near mint
equipment on the radio groups, namely rec.radio.swap at a loss, when I
could've been getting rich on Ebay!

There is no way in hell a Pro-43, Mint, modified, should sell for more
then $225.00 tops. BUT, I guess they are worth what someone is
willing to pay...
Yes, the Pro-43 was an EXCELLENT scanner. But, there are scanners
available today that are as good, or better then the Pro-43, selling
for much less, brand new.

Folks, I'll see ya on Ebay!!!

Wilson....like the basketball

> think it is cb radio) and could not care less.

that's the truth.
i still enjoy using my 706 [now a fresh new mk2g] to talk a couple
states away when i'm mobile. that's the most interesting part for me.
i do get tired of some of the local cb guys asking how much it cost.
where can they get one. does a power mic fit on it etc. and the
no radio guys asking me, 'do you think you have enough antennae on
that truck?' man if i could afford an outbacker, i cut the count
down alittle but now i have to stick with 4 tx and the factory rx
antenna.

on a note about cw, i think it's cool but i could never send any
if i had to use anything but the up/down buttons on the 706.
way too used to it by now.

as for low code/no code hams on hf, i've been making hf available
on my repeater for awhile now. always good operating procedures
and hasn't been a pain in the butt yet. hopefully now, they can
get their own rig and work hf when i'm not around to turn on the
remote base.

most of the higher classed hams in my area are stuck on 2m and
wouldn't know the difference if 20 new hams got on hf around
here.

Hi Leo-

The BC245 is a 500 channel, PC controlable scanner made by Uniden. It tracks Motorola I/II and EDACS simultaneously along with conventional frequencies. The 245 sells for about $200US. The PRO-94 is made for Radio Shack by Uniden and sells for $199US. The PRO-94 has 1000 channels. This radio also tracks LTR systems but cannot scan trunked and conventional at the same time and does not have a PC interface. I don't know about sales in Europe but one of the other regulars can probably help you out there.

Happy Scaning!

There are a number of antennas you can purchase for the scanner that provide better gain than the standard "rubber duck". It all depends on if you want a band specific antenna and if you need roof mount or portable. I bought 2 really good antennas from www.scannersunlimited.com that I'm very happy with. You should call Glenn and tell him what you need.

I havent seen the 2052 but I know it is customary to press and HOLD
the trunk button until you hear two short beeps. Are you holding the
trunk button long enough?

Just a thought.

There you will read the following:Use really thin copper magnet wire and
bare the enamel before soldering
Question: what is really thin copper magnet wire? (Just the type wire and
gauge here would be fine) and how do you bare the enamel?

Well, Ebay cancelled the auction. So, this is still for sale - I
will sell for $160 shipped. Email me if you are interested.

The radio is a like new, Pro -34 hand held scanner, 200 channels, 800
mhz, with two antenna and a belt clip. Works great and has been
modified to receive the cell phone freq's. Specifically, 868 - 896.

Email me if interested.

To whoever bought the Pro 91! Take it back to Radio Shack and get your
money back.The radio is not worth that much.You can find a BC 245 and it is
far superior to the Pro-91.

I can see that cell receiving scanners should get a good price--but I have to question some of these bids--Is it possible one could bid on his own item, using a different name/account, bid the price up really high, then actually sell the item in a later auction, hoping to inflate the price? You see the 2006's supposedly going for $400+ so you gladly bid $350, never knowing the real value was about $250!

Hello,

I have been using scanner for quite a few years now and I am looking to get my first trunking scanner. I was wondering what is the difference between the pro-92 and the pro-94? The 94 is listed at grove for 199.95 and the 92 for 329.95 even tough the 94 has twice as many channels? Is there somthing I am missing on the 92? what makes it so expensive? Also I was wondering if anyone had an opinion on these two scanners? I live here in minneapolis, can anyone tell me if there is much trunking available to pick up? I know some cities near me use digital systems.

Thanks a million,
Sam

I'm sure there are many people running up their own bids, but Ebay is trying to cut down on it though. For new accounts now they require a valid credit card number. It might help. I have sold some items there for good money though. I sold a BCT7 For $150 and there were several others listed at the same time. Some got more and some a little less. I have an old Pro 46 that I don't use much, after seeing what they have been going for I am considering listing it. Just have to be careful how I list it. Sometimes mentioning cellular reception gets your auction booted. But sometimes it doesn't, luck of the draw I guess.

If you're talking about emergency communications (and I assume you are since you mentioned the Coast Guard), the ability to build a power supply is not a fundamental requirement. First of all, if we lose power, the power supply is useless (no power for the power supply).

However, nearly every single ham radio can be ran off 12 volts, Bill. Therefore, in an emergency, all the operator needs is a good car battery (and there are hundreds in my neighborhood).

Of course, in a real disaster, perhaps the ability to build a generator might be useful, but that has never been a requirement for ham radio. And where would you get the parts in that type of disaster?

I'm looking for software that allows logging. Recording of audio
would be nice too.

>> radio frequencies to be lost to commercial services

That doesn't make sense. The only frequencies in danger of being lost
are those in the V/UHF region. There has been a code-free license
available for that portion of the spectrum. Are you saying that that
code-free VHF+ license has been a failure?

How will lowering the HF code speeds provide any more protection to V/UHF?

Our HF frequencies are in no danger of being auctioned; in fact, as
we speak, proposals exist at the government level to give hams even
more HF spectrum.

>1) Too few hams = no political power = bands get taken away for lack of
>usage.

And who is going to take away our HF spectrum? If anything, we stand
to gain more in the near future. (We were given three new HF bands during
the 80s decade.)

>How do you explain ham radio to others, in an age where you can chat with
>people all over the world in IRC? I can call CQ by opening an IRC channel
>for any interest I have, and see who responds. From anywhere in the world,
>really.

If you don't mind being dependent upon millions of miles of phone lines
and government- and corporate-owned Internet computers.

There is no such dependence in amateur radio.

Jeff

547. Mobil Antenna recommendations?

Newsgroup: rec.radio.scanner
Date: 2000-01-04 00:00:00 UTC
From: garrisan@airmail.net
Message-ID: <90A01786F2086390.07C5B768D19D6834.33CB18814C4F77DE@lp.airnews.net>

Looking for multiuse antenna (mobil applications)
Ideally, I could use it when in the car, and also when working in
remote areas.......(city to city travel)
Scanning,
HT rx and tx in multi bands.........I really don't know whats best.

548. Re: The end of scanning

Birdie Freak wrote:> There won't be an end to "scanning",just the next generations of
>scanners will cost you $500+ to "Hear" Em!

Except for one minor detail. More and More L.E. agencys are going to encrypted
systems. While I suppose enough money thrown at this small detail might eventually
arrive at a solution, it is now a FEDERAL crime to decipher those transmissions.....

Hello,

You can't go wrong purchasing from Javiation. Excellent service with
the best prices and service. Jonathon has even gone that extra mile for
me with really no reason other than to please his customer. Great
people and products.

My solution was to buy a cheapy TV antenna from Junk Shack and turned it so the
beam elements were vertical not horizontal. Worked like a champ for a mere $21.

Let me see if I got this correct......

The sender wants me to open a file.

The sender is unknown to me, and clearly indicates in his address that he is "bogus".

The sender does not allow incoming e-mail.

Should I do it? Naw.....think I'll pass. Old "Charlie" may have a STD........

Besides, anyone from "bogus.net" probably has very little accurate information about the FCC.

Hello everyone,
I am new to trunk tracking and could use some guidance. The city that I live in uses 14 trunked frequencies. I am trying to put them in as follows but I think I am doing something wrong as I get an error message. The scanner is the new Radio Shack Pro 2052 1000 Channel Trunk and Conventional scanner

Here is what I am doing Is this wrong
step 1
Pushing button that says trunk
Pushing button for bank 1
Entering the 14 frequencies
Then pushing search
After I push search I am getting an error message

It is getting frustrating as hell I wonder if someone can guide me along here If you email me I will give you my 800 number to call me directly if that will work
Many thanks

Bob,
It has to be searching at the time you press the remote button and not
stopped on an ID.The same happened to me,but then I pressed it while it was
searching and it worked.

I think you both are wrong. The blame needs to be placed here in
the amateur community. Not much impute from the ARS concerning the
changing of the ARS license system. The FCC read the impute given
them and realized that the 'majority' wanted to dumb down ham radio.

The Pro-26 was a Uniden scanner, not GRE. One of my favorites at the time. Maybe you're thinking of the Pro-64 ... another one of my favorites from the same period.

As for the Pro-92, there is only a trivial amount of trunking in my area (Cincinnati), so I have not really had to deal with the trunking shortcomings of the radio yet. I'll agree with those who say that it is a great conventional scanner. I'll keep it for the alpha tags, great sensitivity, PL decoding, WX alert, attenuator, etc. (would've like less batteries, better backlight, better freq coverage, priority search bank and channel/bank management like pro64)

Hopefully by the time our police and fire go trunked, there will be a better alternative available at the same price/feature that I can trade up to. Unfortunately, the value of the Pro-92 will probably be too low to get anything out of as a used scanner. I know one thing, I'll never have another scanner without alphanumeric tags.

That's not the issue at all. You guys have missed the point, exactly like the media-at-large. Nobody is arguing that the system isn't totally arbitrary.

BUT, our official governmental time keeper (the USNO) uses a system that starts with the year 1. For better or worse, it is yet another technical standard that helps to keep humans synchronized. When you successfully lobby to change that system, let me know. Meanwhile, I'll continue to sync my clocks with them, observe daylight savings time adjustments, etc.

You can just set your clock to whatever time you want it to be at the moment, I guess.

Be careful, FSP is not APCO 25 compliant. They utilize the APCO CAI (common air interface) however are
still using a 3600 control channel. Full APCO compliance would mean that they would utilize a 9600 control
channel.

IMHO the "unreliable" aspect of ham radio is what makes it challenging
and fun. How much fun would working a distant country be over the
internet be, knowing full well that there's nothing to prevent it? What
would be the point?

The internet is TOO easy. Pretty soon it will become a cesspool of
sludge for every low-life, social deviate, that can't even get a date,
much less have a life outside of their homes. It will become
increasingly difficult to find meaningful, intelligent, and mature
people to communicate with. This may end up being the savior of ham

radio.

> rate are you worried about?

I have not seen that falling crime rate on the street. In fact, crime seems to be on the rise.

Instead of crime rates actually falling, I think cities are just not reporting crimes, or reporting the crimes as less serious offenses. Perhaps they are doing this in an effort to attract people to the cities. Or perhaps they are doing it to show that all their new "anti-crime" laws are working. Or perhaps even the police officers themselves are doing it to prove how well their department is doing its job.

Another factor that might be affecting this is the fact the criminals seem to be moving their operations to smaller cities. Many smaller towns around to country are starting to see sharp increases in crime. This is likely caused by many larger cities simply not pressing charges if the suspect agrees to leave town. Whatever the cause, as these people settle into their new locations, the crimes rate will start to climb again if this is indeed happening.

Whatever the case, I certainly don't feel any safer on the streets today than I did ten years ago. And, if I lived in a smaller town, I would be very concerned about some of the new people moving into town.

Not sure about the RS scanner but with the Uniden you need to hold
the trunk button in till you hear two beeps, then select the bank
you want to program the trunk channels, then program in the
channels. For an Ericsson system you need to input the channels in
correct order.

Exactly, there was a time when being able to communicate all over the world using your own shortwave equipment was a fascinating thing, today anyone can pull a cell phone out of their pocket and call almost anyone anywhere in the world. Most people don't ever know what ham radio is (or think it is cb radio) and could not care less.

No, there's quite a number of us who know how to add up 2,000 years and
know that it doesn't equal 1,999. I know several people who are tired
of the year early hype, and I'm not talking about people who I know
"from the net." See ya next year.

>correct.

Who said anything about being correct? My message had nothing to do with the "popular" view. The fact is, it is the most widely accepted whether its wrong or not. And I don't think I'm being some kind of drone for thinking that way. Once again, I think you were one of those people who missed the entire theme and intention of my message. Did you not read the following:

>I was just trying to say that I
>wished everyone "good luck" (even though I don't believe in luck) because
>many of us were a little tense about the Y2K bug. Plus, I was just hoping
>everything would be ok with the internet so we could all come back here to
>post our great messages.

You didn't seem to address that issue. I think perhaps you are looking for a debate. A simple "thank you and I wish you 'good luck' too" would have sufficed. I mean, come on - everyone can debate about the actual start of the millennium 'til the cows come home. Just read some of the other replies (I'm not questioning your intelligence. You are probably a very smart guy.). But, that simply wasn't my point. Did you even get my point?

Governments wouldn't have to. As you said, why waste a chance to get boozed up? The same pop culture profiteers who made this the millennium will take advantage of the truth to say "we were wrong, and we're gonna SELL you an even better celebration this year!"

As we saw this year, there's plenty of money to be made on the millennium, so selling it again will only benefit those who made money off of it this time around.....

Got it...Things are so busy here that I had to take the antenna off to
get it to search long enough for the 2 sec remote transfer to pick up.
Now, what do the + and - represent?

Thanks...

Bob

And if the businesses like power companies hadn't put the time and effort into fixing the problem, you would be sitting in the dark wondering why it was cold and your computer wouldn't boot.

The phone companies were pretty much immune.. the switches run on Unix, and that won't break for another 30 years or so.. (that's when there will be an interesting gotcha as their file systems break...)

> threatening its existance!!

Then it's all over but the shouting. Because both alternatives lead to the death of ham radio.

1) Too few hams = no political power = bands get taken away for lack of usage.

2) Easy test/no code = People who have no committment and who come and go at the drop of a hat, mostly going. No sense of membership in anything, no sense of anything at all.

How do you explain ham radio to others, in an age where you can chat with people all over the world in IRC? I can call CQ by opening an IRC channel for any interest I have, and see who responds. From anywhere in the world, really.

And hey, if IRC is too difficult, I can just load AOL Instant Messenger, and do a search for people who are on, for any interest. You show that to hams in the 1950's, and even then you'd see how many would switch to this.

If there's little effort, then there's no sense of pride or of belonging to a community. And you can kiss it all goodbye. People will just use AOL IM, not "unreliable" ham radio.

Source record: 97634

I've looked at 3 different sites (trunktracker.com, bearcat1.com, and a homepage)for the the correct frequencies for Augusta, GA and Richmond County. I have programmed in different combinations of everything that was listed and also the freqs as listed, with little success. I have gotten some trunk ID's to come up and I believe they are correct, but would like anyone in this area to respond if possible with the correct trunked freqs and correct type of system. One web site has it listed as an SMR system and another as a straight Mot Type II. Both have different freqs ? Arrrrrrrrrrrrgh *%&^%&*&)*^^%&(!!!!!!!!

If anyone has the correct answer and the correct freqs, would you please email. Also I am west of 520. Is it still possible to clearly recieve a control channel this far away ? If you are willing to meet somewhere, even better. I'll buy you the beverage of your choice !!!!!

Thanks, Monty

611. PRO 2026 package for sale

Newsgroup: rec.radio.scanner
Date: 2000-01-04 00:00:00 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <84ru3a$5j5$1@nntp3.atl.mindspring.net>
Source record: 97635

The story:

started out with an original PRO 2026 (never blocked, no memory wire,
from circa 1990), that radio was unsecured in a vehicle that was in a
rollover accident and was damaged beyond repair. Salvaged everything
I could (all internals, chassis, power cord, etc.) and bought a late-
model PRO 2026 (cellular blocked, brand new, in 1995). Had a professional
ham radio repair shop take the CPU and main board out of the old 2026
and install it in the new one. So...you get:

1) near-mint condition PRO 2026, late model chassis, with original
unblocked board installed. This one does have the memory wire!
I believe coverage is 29-54, 108-174, 406-512, 806-859MHz. Programmable
100 channel memory, backlit display, preprogrammed service banks
(WX, aircraft, police, fire, ems, marine), jack for power cord, etc.

2) brand new, unused CPU and main board from "newer" model 2026,
cellular blocked, jumper L201 not able to be played with.

3) salvaged chassis and parts from original "Patrolman" 2026 that
the unblocked CPU came out of.

If you got a new front panel and took some time resoldering some things
you would end up with two complete and operational 2026s, one cellular
capable and one not. One would look nice and the other has seen better
days and might not mount perfectly in a mobile environment.

Have manuals for both, may have box from newer 2026.

For sale to first reasonable offer in US dollars.......

612. Re: An intelligent(?) set of questions about Pro-92,Pro-94, BC245, and trunktracking

Newsgroup: rec.radio.scanner

Well, this is great news for me. Sucessful edacs tracking, PL, and
alpha tagging seem to make the 92 the scanner for *me* (until a
motorola system pops up? :)

> > Essentially- if all I ever listen to are trunked edacs systems, will

What's your answer to this question in light of the fact that the 94
does track edacs? (I've read the other posts in response to this one

that confirm this)

>

Hopefully it's just a matter of time. I'll not be getting the
interface for the 92 because I'm sure that someone will come up with a
homemade version sometime soon.

Good news- on my FT50 it takes forever.

However, the PRO-92 defaults to "open"
> mode when you manually step to a channel, so the CTCSS/DCS does not
control
> the squelch unless you are scanning.
>

But can it be changed? A lot of times I'll hit 'manual' to stop on a
channel that I'm interested in hearing.

>

> conversation under certain conditions.
>

Thanks for the clarification- this is the most comprehensive
explanation I've been able to find so far BTW.
I assume we're talking about some kind of 'trunking priority' and not a
'priority channel' in the conventional sense. Like, the 'real' user of
the trunking system can specify a particular talk group, that, if it
becomes active, he would like to have his radio stop receiving it's
current talkgroup and move to. It seems that the 'real' radios would be
programmed with special talkgroups to consider 'priority' that contain
special emergency mesages etc... and that these talkgroups would
probably be very interesting to listen to. Therefore it would seem
important that the scanner handle this information properly. However,
I guess this is a moot point in this case because it applies only to
Motorola systems (right?). Further, it seems that, while this may be
at the root of the Pro-92's problems, the pro-94 and BC245, since they
do not make use of the subaudible data, are unable to implement this
'priority' feature either.

> > > What do the 'real' radios use to stay in synch with the trunking

mode if
> they have data on them.

Are there any systems where data transmissions (not the trunking system
data channel, but MDTs, pagers, etc) are *not* confined to specific
talkgroups? I.E. if the town PD is talk group 06-666, will that group

carry both their voice and MDT transmissions? Or are voice/data always carried on seperate talkgroups?

>

This seems to be the general consensus. I've had 2 Pro-43's and I have to say that neither were considerably better (reception-wise, not feature-wise) than any cheap dual-conversion scanner. I must admit, however, that I overload the scanner since it's about 3 feet from my computer and has an external antenna.

> > > The BC245 has 300 channels while the Pro-94 has 1000.

How many does the 92 have? And how are these channels handled with respect to trunking? Is it just one frequency per channel just like conventional scanners? Is there a limit to the number of frequencies per trunked 'system' that any of these scanners can handle? Is there a limit to the number of talkgroups that any of these scanners can handle?

> > > below, are the trunked systems close to me all Edacs, or could some be

Interesting to know. You seem to be in the unique position to answer my question- are most of the systems in the Ulster county area Edacs?

I've heard this from many sources... It seems a little misleading to
call it 'data skip' when it just passes over birdies and open mics.

I thought I remembered seeing a posting about a '$69.95 cable and
software package for the pro-94' and even if you are right and I have
this mixed up with the 92, then there is at least that software that
comes with the interface. What is it capable of doing?

> > > -The Delay "issue"

I agree with your thoughts on people's overblown reactions to minor
issues, that's partially why I posted this message, to find out just
how bad these problems really are.

From what I understand of trunktracking at this point and your
response, the TT scanner user will first:

-Get the frequencies of the trunked system
-Figure out the talkgroups of interest
-Spend most of their time scanning talkgroups (picking the ones they
want to hear, or perhaps selecting all of them)

So it would seem that this delay is not something that you would run
into very often. It would only be a problem in your initial "figuring
out which service is on what talkgroup" phase of figuring out your
local system.

> Unlikely that they will "fix" a current model. They might come out
with a
> more advanced model in a couple of years. The next big jump will
probably
> be APCO-25-capable digital scanners.

On an unrelated topic- I'm surprised that there have been no computer programs that offer digital to analog conversion of digital audio transmission formats. Long before trunktracking scanners came out I saw freeware programs that could at least decode the control channel.

Andrew,

A preamp ONLY helps if you have large feedline losses AND you locate the preamp at the antenna. In order for a dish to function as a dish antenna at 33MHz it would need to be a minimum of 5 wavelengths in diameter- and preferably up around 10 to get decent sidelobes- at 33 mHz this makes the dish 150' to 300' in diameter. Then there is the problem of feeding the dish....

You need a 3 or 4 element Yagi.

You'r numbers aren't even close.

I bought a 300Mhz system 4 months ago that included:

56K modem, soundcard, cdrom, speakers, microphone, NO monitor

For $300. I had a monitor, but you can buy a decent one for $200 (even less).

My net access is only $7.95/month unlimited. The "average" in my area is
about $13/month.

>better.

You don't have to worry about signal strenght with the computer either. No fading signals with atmospheric changes, etc. It's clear all the time.

The randomness is just as easy with the computer. The software used connects you to countless "chat rooms" that you can select by topic. In any given room, there will be a minimum of 50 people. All will have their location listed (assuming they are honest). You can pick and choose from there.

Not my experience - Using a PRO-60 handheld and rubber duck I can hear LGA control tower which is about 25 miles from my location. Also hear JFK which is about 15 miles away, Republic which is probably 35 miles east.

Of course, using a discone gives better reception.

Good luck,

lyndx

The Yupiteru web site is at http://www.yupiteru.co.jp.

This has been a little intermittent on the past but over the recent
weeks appears to have been updated considerably albeit it is (was) all
in Japanese. It has details of their products other than receivers.

There should have been a code written on the documentation included with
the radio. Call Opto if it wasn't, they should be able to give it to
you.

The 33.86 MHz frequency is close enough to the 27 MHz Citizen's Band
so that you can trim a CB antenna and use it. A mini satellite dish
would be useless at 33 MHz.

Rich,

I read your Pro-2052 comments (on comments submitted by qdh) & did a bit of research, including your strongsignals web site and about a dozen other places I could find. I'm grateful for your insights. I have had a Uniden BC8500XLT for several years now, along with an old (modified) Radio Shack Pro-34, which I love dearly for obvious reasons. I expect delivery of my Pro-2052 in a day or so, and spent most of today trying to guess what I'll need for a computer interface since I haven't received it yet and no one locally had a model to examine.

I did find that www.scancat.com will have a scancat gold version out in a couple of weeks that will include the Pro-2052, so I'm confident that will work, but I'm not certain I want to spend the $ (I've downloaded their demo & it looks quite good).

I'd be grateful if you have any other insights or recommendations on which way to go - obviously, less expensive (not to mean cheap) is better, all things being otherwise equal. I look forward to hearing your views.

Thanks,

Ed P.

Hi,

I'm probably going to be ordering a Bearcat 245 from an American supplier and have it shipped to me in Canada. Has anybody done this and if so how much trouble is it and what can I expect Canada customs to add onto the price. If you have done this who have you ordered from and what was your experience with them. Who should I be avoiding.

Thanks in advance,
Felix

p.s. If you want to reply via e-mail make sure to change the .xae to ca at the end of my e-mail address.

632. For sporting events/racing is there any advantage to Uniden's Sportcat (SC) models?

Newsgroup: rec.radio.scanner

Hi,

I've noticed that Uniden offers models called the Sportcat which seem to be designed with the sports fan (especially the racing fan) in mind. I am currently considering a Bearcat 245XLT and was wondering if I plan to use it a lot for going to F1 and CART races (maybe Nascar) is there a reason why the Sportcat models are better choices? Is it build quality, volume level, features, ... that make the Sportcat a better choice or would the Bearcat 245 be just as good (plus with the trunking features on top)?

Thanks in advance,
Felix

p.s. If you want to reply via e-mail please change the .xae to .ca

I agree with the original poster, Ebay buyers if not nuts, are often ignorant of the real world :-) Rarely do I check into the site, but the other day was curious about pricing on video cameras. The most extreme sillyness was someone who had bid a X10 anywhere cam system up to $158.00. These sell new at the X10.com site for less than $100 and WITH a 1 year warrantee! I bought mine before Xmas for $88.00, including shipping.

Looks like some of the sellers simply put up for auction spy cams they purchase from supercircuits.com at regular listed prices and auction fever or extreme ignorance, pays off nicely for them as several bids of 25% or more over, were noted.

Egghead has an auction area that deals mostly with mfr returns, overstock, and surplus. I've seen on many occasions refurbished items bid to an altitude above that which is the normal price for new product at other dealers. So it's just not Ebay, it's *any* auction site where the buyer should exercise extreme caution!

Out of curiosity I browsed the 'descrambler' section at Yahoo. It would appear half of America is selling illegal DISH network cards to the other half of America, and at prices nearly equal to a legal subscription! Utterly amazing!

I guess many would support this type of huckster activity as being the "American Way", and perhaps it now is.

I don't think this is a detriment. I'd rather have a bunch of
appliance operators, with radio appliances around in an emergency then
a bunch of old parts sitting around and trying to build a CW
transmitter to hopefully get some emergency communications going.
What I'm saying is that it would be nice if ham radio could become
more popular to a broader range of people, rather than to just a few
technically adept individuals.

Of course I have that right. I'm not held in bondage to political
correctness. You just did the same above by calling anyone who doesn't
share your view as an "old fart", did you not?

> There's a difference between "liking" someone, and tolerating someone.
> No one is suggesting that you give new a 5 WPM extra a big Barney hug,

There is certainly a difference. I am required to like nor tolerate no
one. No one is "entitled" to my respect. Your "hazing ritual" line is
another which I find offensive. I've decided to neither like you nor
tolerate you.

I've not decided to refuse "good will" to newcomers. I've decided not
your decree of who should sell equipment and throw in the towel. While
prejudice can be a bad thing, you weren't appointed arbiter of who is or
isn't prejudiced or of who should stay and who should leave amateur
radio (leaving more room for the "rest of us").

> If they pass the required FCC tests, they are entitled to the privileges
> as hams, as set forth by the FCC.

Agreed but I don't need to throw in a towel, sell my gear or to like any
one of them.

> Bottom line: your opinion is irrelevant. The law is the law.

Oops. You don't get to decide what is irrelevant and, in this case, the
regs are the regs.

Hello All,
I have a like new Pro 92 Hand Held Scanner for sale
you know the one that does everything
It DOES NOT PICK UP CELLULAR!
It works and looks new because it is only 3 months old
I have all the original accys
Plus Leather Case, 6 NEXCELL NiMh Batts, and wall wart charger
I would like $350 for all plus shipping in the US
I am selling to pay bills from christmas PLUS the city gave me a
portable
so let me break their equipment not mine :)
For more info or for PICTURES
contact
2nzster@netscape.net
thanks Tiny

Real simple concept: if you don't like eBay, DON'T TRADE THERE!

Or is the REAL reason you dislike eBay so much because it's a near-perfect example of the free-market system at work?

I'm betting on the latter.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

I agree there are lots of "nuts" paying too much for stuff on ebay, but to flip the coin for a Minute there are also many good deals on ebay too. also, for every item used, selling for "new" prices, there are numerous items ending with little or no bids on them, and also many high bid items end up being "deadbeat bidders" that never send payment for the items. I have sold some items on ebay that I thought were worth $20 & ended up getting $50, other items that were worth $100 never got bid past $40 ect........

I am looking into buying a new scanner. I like the idea of the PC integration of the BC 245XLT, but don't have a real need to monitor trunked systems. How is this scanner for "standard scanning?

The BC 300XLT frequency range goes up to 1300 GHz. What is in the 900 MHz to 1300 GHz range?

How do the two rate against each other?

Thanks,
John C Benoist

You can expect to pay GST and PST when it arrives. Have it shipped by air parcel post.....there is only a $5.00 handling fee at the post office. Courier services charge brokerage fees so avoid them. Some dealers in the U.S. won't ship via the post office. I 've had good luck with Grove Enterprises but there are many others to choose from!
Hope this helps.

Hey wierd things happen at auctions all the time. And NOT just at
online auctions. These things happen everyday at fleamarkets,
Antique stores, pawn shops, and priviate sales.

Try checking the compleated auctions for scanner 43 and you will find
5 past auctions.
http://search-completed.ebay.com/cgi-bin/texis/ebaycomplete/results.html?dest=&cobrandpartner=&ht=1&maxRecordsPerPage=50&query=scanner+43+&SortProperty=MetaEndSort&SortOrder=%5Ba%5D
(hope this long URL works)

Two 43 sold in the $170 range.

Go ahead All the ebay users are nuts; buy all the scanners for can
find, you WILL recieve $400 for each one.

> changed your callsign to N7NT?

I've know you changed your callsign for over a year, ya friggin' loon.
I changed my callsign three years ago because I also have an Extra
Class and was eligible to change. The main reason was because I wanted
a shorter callsign for cw contesting. N7NT is two and one half times
shorter than WA7TWI and works better in the pileups. Since you've
stated in the past that you don't work hf, you wouldn't understand such
things.

> That's fine, go ahead & believe that false reality if you like.
> Ovbiously you like the "ignorance is bliss" feel!
>
> > You, if you have the honesty, can prove me wrong
> > by posting the schools and dates pertaining to those supposed degrees.

YOU, Toilet Boy are the demented one here. Your constant denials of
reality
are indications of the depth of your psychosis.

> I would if I felt you were going to be honest & fair. However
> you obviously have no intention of being honest & fair as indicated
> by your desire to know my lengthy education background but
> avoid having to address the same issue of your hero, old
> what's-his-name with the self imposed cancer that didn't
> carry health insurance.

You stated elsewhere that the "newsgroup" asked Cheek for evidence of
his
degrees and commercial license. The "newsgroup" didn't do anything of
the
sort. It was you and only you, you friggin' loon; just one lonely voice
in the digital wilderness. Now you claim that I, a single voice, am
unfair because I ask you for proof of your claims. I suppose you're
going
to claim that the same requests for proof that have been made by others
are unfair as well. All this tap dancing is just further proof of your
hypocrisy and lunacy and just a smoke screen so you won't get caught in
the lie that you have no degrees.

As I've stated before, Cheek showed me his degrees and commercial
license
personally last summer when he came to this area to visit his relatives.
I've seen them so you can bugger off on this point.

> > I saw the picture of you and that bimbo on your web page. I saw her
> > dance at the Acropolis.

> She does more than just dance for me!!!

Lawn work doesn't count. You forgot to answer the crucial question, Does
she still "service" customers in the parking lot like she used to?

Regarding Bill Cheek's credentials, you have no proof of that statement. Then again, the same thing applies to you regarding your alleged degrees.

> To be exact, I claim that I used to work in the two-way radio
> field. For that work, I obtained the license commonly required
> for such work, the FCC "General Radiotelephone License". Since
> that is issued by the government, it is a matter of public record.

You've claimed to have the General Radiotelephone Operators License, but you also claimed that it's impossible to verify such licenses through the FCC. You tried to verify Cheeks commercial license through the FCC and couldn't for that reason. However, I've personally seen Cheeks commercial license and know it exists.

> I am now a "Clinical Supervisor of a outpatient treatment facility" as

> I have NEVER claimed to "write commercial Internet software".
> Either you are wrong, or you are a liar. Which is it?

More selective memory, eh Toilet Boy? Maybe that Alzheimer's is catching up with you after all. You stated that you were writing Internet software
for email filters "for the good of the community." You don't remember, look it up in Deja News. When you've been caught in a lie in the past and
told to look it up in Deja News you said "I won't do your work for you!" The same holds here Toilet Boy, look it up for yourself, if you have the skill. Then again, maybe it was one of your other personalities that said
it and not the current one. Either way, you're still a liar and a fraud.

Bob, can you give some more info on trimming a CB ant. to work with a desired frequency? Which CB ant. do you recommend to trim and put up high on a poll? Although I'm interested in a trim length for 49MHz, instead of 33MHz. Also, would putting an unconnected element right behind the trimmed CB element make this a directional antenna? Thanks, rock56@webtv.net

Always a seminary student who ends up making himself look like he's judging people (by being no different than who he replied to, really) and turning everyone off to Christianity which defeats his purpose in the first place - to turn people toward Christ, not push them away. You need to use that brain that God gave you a little more and THINK before you speak. God didn't put you here to correct people's wrongs. He already did that. Learn where your proper place is. Even Jesus "put down" the Pharasies. Read a little more, talk a little less. No offense.

There has been a code exemption for physicaly handicapped people whos
disability kept them from doing medium speed code,look wow that was
abused.
There wasn't a mental disability waiver because no one is that
disabled.(you could be the exeption).

670. type I fleet map

Does anyone know how to program a preset fleet map into a PRO-90.
Specifically, I need "E1P14"
I've tried doing what the manual says and it just doesn't work. I would
greatly appreciate any help!
Thanks!

David - Decatur, GA

Hello guys,

I've learned so much from reading this newsgroup and now I ask you all for your opinion on my next scanner purchase.

First some background and my application:

I work in aviation so I enjoy listening to aviation freqs (118.0 -135.0 mhz) and want to retransmit freqs from the local airport in my area onto the net because noone in our area has done it yet. :)

I have been using a handheld Uniden BC200XLT receiver for years. I have a Diamond DJ130 http://www.rfparts.com/diamond/d130.html which blows away my recent purchase of a Grove beam antenna. I got the Grove beam antenna because I thought it would greatly improve my reception of signals that are transmitted skyward about 35 miles away from my home. I know aviation transmitters transmit skyward so I know that antenna height is important. I have my DJ130 at the top of my attic just touching the roofline. I live on a hill so we have good elevation but I am still unable to bring in freqs clearly that are transmitted about 35 miles away from me. I can hear ok but there is some static that I would like to eliminate. I would say I am hearing at about 40% capacity, enough to hear and understand what is going on but still too much static and its making me crazy!

I got a Grove preamp and that helped significantly but I still am only receiving the desired freq at about 40% clarity.

So now I am thinking that this little handheld Uniden which was manufactured in the late 80's might not be powerful enough to tune this freq clearly. I want to know what you experts think. If you think a beefier receiver would solve (or significantly improve) my problem, please reply to the newsgroup. And if you can provide manufacturer's name (and website is you know it), and model #, that is also appreciated!

Thanks for all of your help and I look forward to your educated responses!

Best Regards,
Steve Marcus

If this discussion is any indication, it's ALREADY impossible to find
meaningful, intelligent and mature people to communicate with on the
internet.

Well! I'll have you know that I was being negative, smartass, and
in-your-face on the Plato network twenty-four years ago. I didn't need the
internet for that and neither should anyone else!
(ATTENTION: Although it is not fictional, this HAS been a joke :-)

The New Dark Age is on the way, eh?

I'm afraid that they should have killed Marconi, Bell and Edison in the
cradle, then. That's the only way it could have been stopped. Direct,
person-to-person contact can be a terrible experience when "the lesser
sort" are involved.

Please tell us where you went to medical school. My friend, who
is an RF design engineer, my antenna Elmer, and was, for many
years, the chief engineer for an AM broadcast station, tried
for hundreds (maybe thousands) of hours to get to 13wpm. His
most sacred goal in life was to be a general class amateur.
He never made it to 10wpm. Walk a mile in his shoes before
showing off your gross ignorance.

Source record: 97363

I think you will be very disappointed with the results or at the very least, disappointed with the results considering all the effort that you went through. A quarter wave at 33 Mhz is approximately 7 feet. For a dish to have any decent gain, it should have a minimum diameter of 10 wavelengths or for 33 Mhz, about 280 feet. I think the dish you are planning on using will have some very serious shortcomings.

You would be better off building a 3 or 4 element yagi and then enhancing it with a preamp, but be careful to not overload your receiver from other nearby strong signals or your net result will be worse than the origianl signal you were receiving. Plans for a yagi can be found in many of the ARRL handbooks which will give you basically cook book formulas for your particular application.

Best of Luck

Tom

If you have a CB 3-element beam designed to work on 27 MHz and
you want to trim it to 33 MHz, cut each element down to 82% of its
original length.

Where did the 82% come from? 27 MHz / 33 MHz = 82%

That changes the beam's resonant frequency. Its gain and
front to back ratio are a function of how far the elements are
spaced from each other. In a perfect world, you could change
the inter element spacing, too, to preserve its gain and
front-to-back ratio. But that's more difficult to
do (drilling new holes in the boom) and not worth it.

Your new "cut down" beam will have higher gain but lower
front-to-back ratio than before, which is actually to your advantage
because you wanted high gain.

You can use a 10 meter ham yagi antenna, but it may be harder to find
and more expensive than a CB yagi. If you find a 10 meter yagi,
they are sometimes adjustable. You can do the arithmetic, i.e.,
find the dimensions for 29 MHz, then reduce the elements
to 88% (that's 29/33) of their length.

I'm not familiar with current CB beam models. Look
for a simple yagi style and avoid unconventional designs and those
which use loading coils.

It's funny how the old school has that certain blindness when the new class walks in. I'm certainly not one of the young ones but I've watched the new class build all types of electronics that the old class couldn't even imagine. I've seen young hams buil miniature control circuits and repair these tiny handy talkies with surgeon's glasses on. I don't understand it all but they do. Is amateur radio worse now?

I think not. I have two radios on my desk that, combined, cover 100 Khz to 3 Ghz. I can transmit on all the bands I am licensed for. Best of all they are scanners too! Wow! They've got my attention! Thanks a bunch to the new class. I'm GLAD that they are not still tinkering with CW keyers, tubes and 20 pound one-band radios. As I watch them I learn. But you can't learn with your mouth open.

Guys, get a life, it happened, you won't change it here. I
know and use code often (as a LOWLY tech+ until the change).
Haven't been able to get to a testing session to upgrade
(they have this tendency to have them on Friday nights at
7:00pm, I get off work at 3:30 and live 100 miles away).
Instead of bitching and moaning why don't you all try to
help someone new learn something instead of being self
centered about MY bands.
Mark
ps: now I know why I like eme, thet don't care about what
class of license you have, if you can put it on the air you
must know what you're doing!

I live approximately 5 miles from Logan Airport in Boston, MA. I can't listen to the tower at all...even with a telescoping antenna for my Pro-91. I will say that I can hear the aircraft quite well though. I don't have a roof antenna, so if i want to listen to the tower i must go to the airport...sounds like at 20+ miles...your bumming..

Well, as you know, most new scanners and not modifiable to pick up
cell phones, etc. To me, its not a big deal, especially when Digital
Cellphones are mainstream now.

I guess, based on whats been going on at Ebay, whatever someone is
willing to pay!

Regarding the 2006, I would say that a MINT 2006, with a bright
display, would sell for $250 - 300 tops, and 300 would have to bring
an absolute brand new condition scanner. Anything more then that is
ridiculous, in my opinion. Yes, on Ebay they are going for $400 and
up...

I am not sure how much the Opto board would add to the price.

HI,

I am considering purchasing a scanner and taking all sorts of things into consideration. I was looking through the scanner listings for different racing teams in the CART series and for a lot of the frequencies it mentions the frequencies with a slash followed by a number (eg. 461.7500 /14) and the heading is Frequency/RTC. It also mentions that the scanner needs to support RTC or Relm Tone code? Is this something that most scanners support and it is assumed or is this a really specialized feature? Does the Bearcat 245XLT support it and if not are there well known scanners that do support this?

Thanks in advance,
Felix

p.s. if you want to reply via e-mail please change the .xae to .ca in my address.

Why would today's prospective ham care? All he knows is that it's a shitty
connection. Like when you have a bad phone line. Or there's too much
&^$%&^$% static on the radio.

He doesn't know anything about propagation. MUF is an erotic term from
college. All he knows is that he's "getting bad reception."

>All you have to look forward to is a ETERNITY in hell...

If hell is being away from you and your God then he is better off.

>Here's the GOOD NEWS...you don't have to go to hell,

Here is the REALLY GOOD NEWS...There is no hell.

>YOU CHOOSE to go there YOURSELF by rejecting God.

You are in hell already.

>Listed herein are 5 things God wants you to know and believe in your heart.

Nice to know that God has someone to speak for him. Is God dumb?

> My friend, are you willing to admit in your heart before God, that He
>speaks the truth about you?

Only if "" is the truth.

>You MUST in order to be saved. Only those who see themselves as God sees
>them, will ever be saved.

You can change that: Go into settings>filters, and uncheck the setting
that says: Save only as God sees you. Also uncheck any other filter
settings. That way God.exe will save you no matter what you do.

> II. You Must Know That Your Own Works Cannot
> Save You

The bug in works.exe that prevented saving has been fixed.

We urgently need a fix for the bug that prevents people like you
thinking for themselves.
Take it somewhere else God boy.

Firetalk is a FREE program that this can be done with, all you need is
a mic, a computer, a 56K modem. and your voice, another program is
hear me...

http://www.firetalk.com

http://www.hearme.com

both are great programs.

--> Right, but he was pointing out that that's only true if you already have
the computer. Let's run some numbers off the top of my head:

Computer (Used): Roughly $500, probably.
56K modem : $120
Mic : $5 for a cheapie
'Net access : $20/month, depending.

Used HF radio : $300 (if ya don't mind tube gear)
Coax, antenna : Probably under $100, if you "roll your own" wire antenna.

Now, as far as "bang for the buck" goes, it's still hard to beat my Drake
TR-4, is what I gather from this back-of-the-envalope analysis. Of course,
it all depends on what you want to do. If you want a reliable way to talk
to a specific person in Australia, you're better off with the computer.
If you want to chat with random, sometimes interesting people, and do
something challenging in the process, well, the radio's going to suit you
better.

Well, the subject prety much says it all... I'm dispatched on 33.86
Mhz, but need to recieve the dispatch center from about 25 miles away.
I ALMOST have a line-of-sight shot to the transmitter...

What I need is plans or sugestions for such an antenna.

I was thinking of canabalizing a "DISH" mini satalite dish and a 1/4
wave antenna with a 15-20 dBa amplifier...

Any other ideas?

Andrew

What I want to know is how some eBay'ers can block anyone else during the last minute or so. It's happened to me several times, no further bids went in, eBay wouldn't respond on that auction but was fine on others. One winning bidder admitted he pulled that trick but wouldn't tell me how.

In my hometown, NY, if the police arrive and the suspect is gone, it's simply reported as a GoneOnArrival, or Unfounded. Additionally the part about time delay between the Call and actual dispatch is a real problem. It can be minutes, hours, or Never before your call to 911 is responded to, depending on how urgent your call is, and how busy the police are in your area, or which cop wants to pick up the call. Additionally I've heard calls be forgotten about when the dispatchers change shifts.

You missed the point. I wasn't talking about emergency disaster communication, I was talking about the technical know how to design, and build something as simple as a 12 volt, 20 amp power supply so you could use a mobil transceiver from your den or work shop in your home or office.

Yes most hams should be able to run their equipment of their car batteries as most of the new equipment comes with the cabling and instructions on how to do that. But could they build a voltage regulator circuit to run off the cars ignitions system to supply say 6 volts dc? or something other than 13.8? That's my point. Although its been a while since I actively looked at some of the electronic magazines, and ham magazines I haven't seen much of those circuits that I thought I could build. I know my way around a soldering iron, and can read a schematic. But don't ask me to mess wish some digital stuff it just wont get done.

Sadly today most hams are appliance operators. This had been going on for years! not since the no code went in to effect. I have a couple of friends who are techs before the code came in and they had problems soldering a simple pl connector.

Once again it's not the code that's the problem though it can be tough, it's the theory that you need to know to build and understand your equipment that should be stressed.
regards
Bill Carty

Actually, any number from 0 to 65535 is a valid ID.

Because of the way that Motorola trunked radios work, they assume the low order bit to be a '1' when in a specific scan mode, and that is why most commonly you will only see the even (i.e. 16 + n*32) talkgroups -- that enables that scan mode to be operational.

Actually its against eBay rules to bid on your own auction to inflate the price.

Yes, eBay buy'ers can be nuts. Before the eBay ban on Cell scanners, I had bought a PRO-34 for $50.00 at a local pawn shop, it was in like new condition. And sold it on eBay for $300.00!!! But in the pre-cell-ebay-ban days you could actually put a true description of the item.

Carefully worded adds still go thru without cancellation.

Example:

Brand X Scanning receiver. 2 gazillion channels, lightspeed scan rates.
50KHz to 1 GHZ coverage, CELLULAR BLOCKED. Note, although this
scanner is CELLULAR BLOCKED, it can still receive the pre-ban 800 to
900 MHz UHF TV audio sub band with continuous tuning using stock step
rates.

When they make older UHF tuners illegal to own, they may be able to
have a case against the above listing, which says the same as cellular
capable. Anyone can pull a Rotary UHF tuner assembly having channels
69 thru 83, apply 12 volts and feed into a receiver with a 30 to 50 MHz
tuning range and have a basic wide range receiver. Not nice to
look at, but it does work, and tuner units are still available if you look
hard enough.

Just a thought......

Hi, Andrew,

Your only solution is to get any decent antenna up up the air. At a distance of 25 miles, to achieve line-of-sight contact, two antennas need a combined height of about 300 feet. If you're fortunate, and the transmitter antenna is 300 feet high, then you only need to clear your neighbors rooftops. If the transmitter antenna is 100 feet high, then you would need to contribute the remaining 200 feet.

You mention a 1/4-wave antenna. They work remarkably well for such a simple design, delivering unity gain (0 dBd, or 0dB-dipole, equivalent to the gain of a half-wave dipole antenna). A 1/4-wave antenna at 33 MHz would have a vertical element about 7 feet tall. For comparison, higher performance antennas include the 5/8-wave vertical, about 18 feet tall and delivering about 3 dBd gain, and the 3-element Yagi (beam), about 20 feet long with 14-foot long elements, delivering about 6 dBd gain.

Amplifiers are most useful for overcoming feedline losses, rather than making up for low signal strength from the antenna. I'm not aware of any 15-20 dB units available covering this frequency.

The mini satellite dish you mention is a high performance antenna at its design frequency of 12 GHz because it is about 20 wavelengths in diameter at that frequency. That's equivalent to a 500-foot dish at 33 MHz. Sorry, the mini dish would be no help at 33 MHz.

Good signals,
Charley_Harp@alum.calberkeley.org

Didn't check to see what frequency they were on, but in the US it is
legal for anyone to own, sell or buy radio equipment that will transmit
on almost any frequency. It just becomes illegal to transmitt with out
a license or other coverage on most frequencies.

I have an AR-8200 with:

- original box, manual, and accessories

- Diamond RCH77A Antenna

- CC-8200 Computer Interface with CD

I have over $800 invested, only a little over 1 month old, MINT CONDITION!!!!

Package only $600 shipping included! (to lower 48)

There are some other serious considerations when you use amateur equipment in the public or commercial bands in that the amateur equipment is not type accepted for use in those (or anything other than amateur) bands. This use can result in fines up to $10,000 per occurance, meaning each time you push the transmit button. It's not too hard to get to seveal hundred thousand. These fines are entirely under the control of the FCC and don't require local or other police actions.

Bob

Dear Scanner Friends,
It seem's that you know a lot about the
AOR scanner ,could you please help this helpless scanner friend in South
Africa with his scanner AR3000A "that's me" with a PROBLEM
This what happen:
Lighting stike my house the transformer burn
out , waited three week to recieve a new transformer from the UK. AOR
transformer and then plug it in "nothing" happend, check out this new
transformer all seem's ok! ,opened the reciever and the fuse was fine ,
reset the reviever from the inside nothing happend , it also seem's there
is no power on the on/off switch ,I checked with a volt meter "I know a
little about ,,,very little about electronic's ,AS you can read"could
you.Scanner Friends please help me were to start look ,could it be the
voltage regulater IC and if it is were could I find this voltage regulater
and the IC number ,PLEASE ,PLEASE HELP
Thanks
Scanner Friend
Email ruidep@icon.co.za
Please Help.

I am buying old DIRECT TV DSS systems that you no longer use. I will purchase access cards by themselves, receivers with access cards or complete systems. Please email me with the receiver brand or model and which type of access card it has. If you are unsure, let me know the number below the bar code on back. It should start with "H", "HU" or "F". I'll be able to determine what type it is from this information and can make you a prompt offer.

Thanks,

Mark

That's right!! You'll be able to tell them from the old idiots who
persist in bad-mouthing any newbie who doesn't 'fall in line'
with what they 'had to do' to earn their wings.

Sorta reminds me of the old farts who sat around when I was
a kid telling old WWII stories about how they each won the war.

Just as pathetic, and just as pointless.

The real shame is there will be a few of the newbies who will be
mesmerized by the old farts, and become one...

Same experience here. Over 30 transactions and only one refused to pay. Had to relist and sold the item for even more than the first time and got paid that time. Been burnt 3-4 times on this newsgroup. If you see someone named Josh Jandrain with the email address of BlmngtnJJJ@aol.com. Let him know I am still waiting for my copy of Windows 98 or my money back.

Well, listening using simple things, like a TX/RX scanner for cordless works fine, as well as listening to cell phones, but the simple fact is a cordless phone just uses a clean frequency. and a cell phone uses a PL tone as well as a frequency, and the tone with some other FM things can hide most analog data. That is what is normally used, and how cops catch these people is just using a 900MHz FM receiver that ignors the PL tones incorporated. Acutally it is pretty easy to adapt a 450MHz receiver to do the same thing, and eavesdrop on those same conversations.
Ham radio experts tend to know the most, and the transmitters normally operate on less than 250 MW, rather than a high output like most commercial radio.

It's probably nothing more sinister than a few military folks interested in getting frequencies that they are not (because of security) otherwise entitled to for their own hobby monitoring purposes. I used to work on a military base and there were a lot of folks interested in getting various miltary frequencies for the same NONsinister reasons. Just forget about it. You have a very good website.

But theres no DX allowed on this band. So, a no code HF band that
required a written license would be nice. I don't think that
eliminating the 5WPM requirement will introduce a bunch of riff-raff.
After all, learning the 5WPM is really just a waste of time. I'd
rather use that time to study more radio theory than to learn a code
that has no bearing in science at all. Its just a code.

Well, from a manufacturing point, I agree. But from the owners point of view, it's not always so simple.

The Alinco DR-590 series of radios for example, you have a SINGLE mod to open the radio up. Why do that? Well, you can't do 'cross band repeat' except to open it up, as well as a few other little goodies. But now it tries to transmit anywhere it can hear. OOPS!

But I WANT the capability to hear. I keep weather, turnpike PD, and the traffic helicopters in my radio in my car. Turned out to be VERY helpful, on MULTIPLE occasions.

Transmitting? Who cares. Those that really want to will find a way.

You are terribly wrong about this. Bill Cheek is NOT a decent guy. He is
a
'man' so consumed by an insatiable ego, that he eventually has to
descend
to hurting others feelings, often very cruelly, in order to nourish his
distorted self image. And he was very skillful at making it appear that
he
was blameless in the matter. Bill Cheek is not stupid.... he * is * a
borderline personality, or socio-path. The people that think Bill
Cheek
is a heads up, honorable guy are the ones who are disillusioned here.
Nauseatingly so.

Another deception Toilet Boy? You have this in the Organization field:
Organization: report abuse to "abuse@parg.org" of your headers, yet
within
the headers is the truth: X-Complaints-To: abuse@home.net

You're still a liar, Toilet Boy.

You still are avoiding the issues about your non-existent degrees.
Keep lying Toilet Boy, only you believe your lies.

You are terribly wrong about this. Bill Cheek is NOT a decent guy. He is
a
'man' so consumed by an insatiable ego, that he eventually has to
descend
to hurting others feelings, often very cruelly, in order to nourish his
distorted self image. And he was very skillful at making it appear that
he
was blameless in the matter. Bill Cheek is not stupid.... he * is * a
borderline personality, or socio-path. The people that think Bill
Cheek
is a heads up, honorable guy are the ones who are disillusioned here.
Nauseatingly so.

<dmbrodbe@mtu.edu> wrote:

Don't underestimate how quickly/cheaply devices can be produced. Take
the Direct Broadcast system for example. Inexpensive was they key; they
ended up with a stamped metal dish and a $35 LNB (net cost). You can
still spend a few hundred on an LNB for TVRO, yet one for DSS is a tenth
of that to manufacture.

Money comes from other areas as well; just because the GPS capability
costs aren't absorbed by the end user doesn't mean production costs
haven't been offset elsewhere. Some group like Motorola could step in
with their "Jupiter" chipset and agree to produce a
cellphone-integrateable circuit for very little so long as certain
advertising agreements are adhered to. (ie: 'Motorola' printed on most
every phone out there, despite who made it).

Also, when you are talking about something as expansive as the
cell-phone market (I read there are more of them installed than TV's!
Projections claim that there will be 3 cell-phones per TV by 2005).
Individual unit production cost drops sharply when you are producing
millions and millions of them. Personal GPS's just aren't selling in
these numbers.

Just my .02 worth of banter...
73

First, I'd like to state that eavesdropping on cellphones is illegal.
(And I believe that applies to cordless phones as well.)
It's also IMHO immoral to eavesdrop on conversations which
people expect (naively, in technical reality) to be private.

> > I hope you guys can sort out the cordless phones from mobile one.
> > The diffrence is important, a cordless is extremly easy to listen to
> > since most models doesn't use any encryption today.

46/49 phones and early analog 900 MHz cordless phones use FM ...
they would be easy to listen to with a scanner that could tune
the frequencies (though illegal and also immoral, IMHO).

However, the newer digital and spread spectrum phones would
require a great deal of technical sophistication to eavesdrop upon.

For example the FHSS cordless phone chipset which I was
intimately involved in designing for my employer uses digital
transmission, digital encryption, and frequency hopping.
While it's not what the NSA would consider "cryptographically
secure" it's pretty damned private.

>> The phones rely
> > mostly on low-effect transmitters for security, that is; since the
> > signal is hard to detect far away you can't do much hamn anyway.

Phones based on the chipset I briefly described above have
a range of 4000 feet ... the better part of a mile ... in open
field conditions. Buildings and other obstacles, will, of course
reduce the range in an environmentally-dependent manner.

> > If you already are being suspect to an investigation of some sort,
> > then you have a problem. Usually the only thing one has to do; is
> > getting a similar cordless phone and listen through it's handset
> > or in some cases a scanner and a spec on the phone (for the tx/rx
> > freqs).

Even for the analog phones, you will generally hear only one side
of the conversation, since they operate full-duplex on different
frequencies at the same time.

The digital (and particularly the SS) phones are, as I said,
damned private ... I would guess that it would take a minimum
of many 10's of thousands of dollar's worth of equipment and
a LOT of technical know-how to sucessfully eavesdrop them.
(Even having another unit of the same model won't really work
since the handset and base securely exchange security codes
upon which the encryption and the frequency hopping sequences
are based.)

BINGO!!! What luck!!! Man, it's like throwing a spit wad and hitting the
principal smack on the forehead by accident. Sorry fellow, you are

marked for life; it's going into your 'permanent file'---it will be
there forever...

Like its hard to buy a VHF or UHF radio from one the radio newsgroups and program it with the freq's of the local PD or FD? Its not like this stuff is restricted or anything.....

Yes! You could blow out the scanner sensitive "front end"

Also, you will not have a proper impedance match on the C.B. due to the loading of the antenna by the scanner. Also the C.B. could cause some frequencies to be lost that you wish to receive on the scanner due to loading.

789. Re: FRS receiver vs scanner

Newsgroup: rec.radio.scanner
Date: 2000-01-06 00:00:00 UTC
From: Bendthelite@webtv.net
Message-ID: <2176-38754968-215@storefull-112.iap.bryant.webtv.net>
Source record: 97238

The antenna on your FRS radio is tuned for maximum gain for this frequency range. Where as the antenna on your scanner is a jack of all trades, master of none affair. This might have something to do with it.

790. Pro-66

I agree. Using the Internet is fairly easy. But understanding how it
works isn't. Doing something other than using various client apps, such
as setting up a server, creating CGI scripts, developing Web apps and
the like are far harder than getting any ham ticket and going out and
buying the lastest Yeawooodcom radio and getting on the air.

But Java has nothing directly to do with the Internet. It is a
programming language. It can be used via the Internet or not, just like
many other programming languages. You're far more likely to encounter
Perl on the Internet than Java.

I paid under $200 for my PRO-94. While it doesn't have all the
computer interface and scanning capabilities as th BC-245xlt, it was
my first trunking scanner and I am well happy with it.

Message-ID: <20000106002650.25434.00001051@ng-ba1.aol.com>
Source record: 97247

I have a Bc895 with a scantenna antenna about 35 ft. up. The fire stations in my county are dispatched and operate off of both VHF lowband and highband. The lowband reception is excellent but when companies are dispatched on 154.1300, I hear what sounds like"rushing water" in the backround. It does this on and off during the course of a transmission. Also while scanning, it will stop on a channel for as long as 1 minute with nothing but loud noise. Sometimes, you can faintly hear people talking in the backround while the noise is occuring. The frequencies that it does this on are 154.13, 154.28,154.37, and 154.445. If my scanner is being overloaded, why is it only on these frequencies?
Thanks!

BULLSHIT!!!! YOU ARE TELLING ANOTHER LIE!!!!!!!

I have NOT had the callsign "for over a year" as YOU have indicated.
The FCC issued the call significantly LESS than a year ago!!! The FCC
database proves you WRONG!!!

YOU ARE A LIAR!!!!

SNIP
> YOU, are the demented one here. Your constant denials of
> reality > are indications of the depth of your psychosis.
SNIP

YOU are the one who states I have had a different call "for over
a year" yet the FCC data indicates otherwise. YOU are the one
who is in denial & demonstrates psychosis!! Plus, if YOU
pay that much attention to me that you would track a callsign
change then you need something in your life. Get a dog, join a
Chess or checkers club, perhaps try square dancing.

> You stated elsewhere that the "newsgroup" asked Cheek for evidence of

I don't know about the box, but I believe it says so in the catalog.

If you want that to work as a 4-channel system, you have to buy the extra
cameras anyway. Guess where the cables are included? With the cameras. Now,
if you bought cameras from Radio Shack and didn't get a cable with the
camera, then you have a beef.

> I was told that I could purchase the 2 additional cables (#12216750) at

They're a special order item--anything with that type of 8-digit catalog
number is.

> RADIO SHACK BUYERS BEWARE ...
> Radio Shack is experiencing a shortage in components and is packaging
> and selling their brand name equipment without all of the necessary
> components.

Well, Radio Shack is experiencing a shortage in some of the items in our
special order warehouse, that's for sure. However, the "necessary
components" come with the cameras, which *is* the logical place to put them.

Frank

I know I know. Sorry. It just makes me mad to see "Christians" going around nit picking on people. I think that if I didn't already believe in God, and it was up to that man/woman to be a spokesperson for God to me, I would've walked away. I know that person has a right to free speech, but when you become a "Christian" you shouldn't want to go around condemning people. I mean, if God doesn't condemn us ("...God sent NOT His son to condemn the world..."), then why should we? Real Christians have a responsibily to be accountable to each other and correct each other ONLY in love. This person, first of all, had no guarantee whether the other guy was a "Christian" or not. In other words - why hold someone to a "Christian" standard if they don't even believe in Christianity? Secondly, even if the guy was a "Christian" - it just didn't seem like love based advice. You have to draw the lines somewhere don't you? I could care less if that guy "cusses like a sailor". So what?! I'm sure Jesus hung out with "cussers" and loved them anyway - not "rebuke" them. And I said "no offense" because I meant it. I'm almost afraid to tell anyone I'm a "Christian" nowadays because of the immediate stereotype of "CONDEMNING JUDGE" that usually follows. I wasn't trying to condemn. I was trying to give a little advice. But I guess maybe it came out wrong. Like said - I'm sorry. Point taken.

I am looking into buying a new scanner. I like the idea of the PC integration of the BC 245XLT, but don't have a real need to monitor trunked systems. How is this scanner for "standard scanning?

The BC 3000XLT frequency range goes up to 1300 GHz. What is in the 900 MHz to 1300 GHz range?

How do the two rate against each other?

Thanks,

813. LAPD ASTRO frequency list?

Newsgroup: rec.radio.scanner
Date: 2000-01-06 00:00:00 UTC
From: akin@nospam.com
Message-ID: <387472e5.6198576@news.pipeline.com>
Source record: 97262

Greetings!

Does anyone know of any COMPLETE listings of the frequencies the LAPD has in their ASTRO rovers? You know, so a scanner could be programmed identically, so that when an RTO tells a unit to switch to tac-181, you could switch your scanner to channel 181 and have the proper frequency set up so you could listen without interruption?

A properly formatted *.doc would be nice, but hey, I'll take whatever I can get! I don't want to have to type one up from scratch if I can avoid it...

Thanks!

Be Safe!

> >>This person is nothing, but a jerk with a radio.

Yeah, a jerk who used the radio to "broadcast music, news
and political view points via unauthorized radio stations!" All
airwaves are
public, but most airwaves --like other public things-- are regulated.

> >The mass media of this country doesn't use terms by mistake.

Right, it's a conspiracy!!

> >If this is what they're calling police band jammers you can expect
> >some dick-head of a politician to step up and call for stricter laws

> >and the pirate radio operators that are mentioned above.

Wow, the idiot jamming public safety comms is just a "jammer," but the
politician in your straw-man (who is falling down a slippery slope...)
argument is a "dick-head!" And gee, wouldn't it be a tragedy if
someone --even a politician-- tries to make it more difficult for some
jerk to jam public safety channels?!!

> >This is how they, the media and the law givers, do it. They demonize
> >something, try to scare the public about it's possible dangers and
> >then they attack it. As they've done to guns and tobacco.

More conspiratorial paranoia... I truly hope that when you soon
have a heart attack due to getting yourself all worked up about this
conspiracy, some "malicious interference jammer" is jamming your local
EMS dispatch frequency. When you expire due to the nearest EMS unit
not getting the run in time, I wonder if the media will "demonize" the
jamming?

If you're not able to put up an outdoor antenna, try using the $9.95 telescoping whip antenna Rad Shack sells in place of the rubber duck. The telescoping whip will easily outperform the PRO-90's stock antenna, even from a basement location.

TomCat,

Mesaba is a regional airline based in Minneapolis. It is a joint venture between Northwest and the owner of the Twins, leases planes from Northwest, and operates outside Northwest's union contracts at lower crew cost. Bishop Internation, eh? Once heard AF1 fly in and out. (Yeah, I know, you mean DTW.)

Good scanning,
Charley_Harp@alum.calberkeley.org

828. Re: Amateur Restructuring Announcement - RESULTS?

Newsgroup: rec.radio.scanner
Date: 2000-01-06 00:00:00 UTC
From: "T. Smith" <nospam@nospam.com>
Message-ID: <3874A0B3.52A6@nospam.com>
Source record: 97277
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

What results will restructuring have, what questions will be raised?

1. Where will all those antennas be erected now that zoning laws are a matter of fact in practically all communities and housing developments across the US. Will amateur antenna erection issues be subject to Supreme Court review and rulings.

2. Will the expected rantings and ravings of a hoard of cb'ers propagated world wide on the HF bands at the eleven year sunspot maxima make citizens and governing bodies of the US appear as chumps and cause a loss of face in the global community.

3. With the expected increase of operators will the FCC impose a reduce power limit so as to maintain appropriate RF field intensities in areas of human habitation---for the children.

4. Statistically speaking, will the increase of illegal activites that will accompany the increased population of amateurs be managable by the FCC---if they can't afford (funding, manpower) to manages the mess that they created what then.

5. What restrictions in advanced design of amateur equipment will be imposed now that manufacturers have been stimulated to produce by the creation of larger market demand.

6. Will amateur radio disappear into the 'noise' by a future FCC Report and Order that all amateur activities cease and desist and resort to channelized control of spread-spectrum modulation techniques to hide and get rid of the dirty little mess. Pass codes will be issued instead of callsigns to activate strictly regulated (FCC) communicators (ex-tranceivers).

7. Will all amateur HF allocations be eliminated and relocated to spectrum translators aboard amateur satellites operating at milimeter wavelengts.

8. Will amateur equipment contain embedded identifiers and GPS locators to control errant amateurs---computer databasing and issuance by violation notices by FCC or ARRL Official Observer staff (by FCC approval) at the mere push of a button by decoding an encrypted data burst piggy-backed with amateur transmissions.

9. Will we tire of 'smokey' reports from one end of the continent to another.

10. To ease congestion, will amateur VFO's (slyda's or sliders) be eventually outlawed and be replaced by channel selectors.

11. Will older amateur equipment at some future date be outlawed as the transition to controlled radio communications is established.

12. After April, 2000 will we find that an obtaining and possessing an amateur license from some third world country (like Somalia) where testing is more rigorous convey greater prestige to it's holder than to be licensed in the US.

13. To Be Continued...

There are programs which will automatically generate valid looking
credit card numbers (with correct check digits). Plus there's always
dumpster diving for credit card carbons/discarded receipts/statements.
My bet is that scamming is far from dead on eBay.

Note: Spam shields raised (with rotating shield frequencies). Please post responses to

> share your view as an "old fart", did you not?

No, I did NOT say that anyone that does not share *MY* personal views is
an old fart. I said that anyone not willing to be open minded, tolerant
and non-prejudicial, was an "old fart" Maybe I used the wrong word.
Maybe I should have just said "Bigot". Look up the definition, and then
```

try to tell me that many of these guys (including you it seems) do not
fit the definition. And THEN tell me that I'm "arrogant". If the truth
hurts that much, maybe you should re-evaluate your point of view.

>

Bummer! The world is full of people that may not agree with your view of
things. I see it as you have 2 choices. Accept, tolerate, and
understand, or stick your head in the sand and be miseable. Which will
it be?

As to liking me or not, that is your choice as well. I certainly won't
lose sleep over it. As for tolerating me, well, as long as you continue
to read, you'll have to tolerate me, and others, who don't share your
views. That's life. Since your arguments thusfar have been based on
opinion and emotion, you cannot "win" the debate. If you'd like to
debate this on a factual basis, I'd be up for the challenge.

> radio (leaving more room for the "rest of us").

I never implied that I was the all mighty "arbiter". The prejudice is
blatently obvious in those who will not tolerate others' activities,
simply because they don't fit into their own narrow viewpoints. Don't
shoot me for being the messenger. I only speak what I see. Because you

refuse to see it, or try to rationalize it any number of ways, does not mean that it isn't there. If it walks like a duck, swims like a duck, and quacks like a duck, it certainly ain't no chicken...

Whether or not someone "throws in the towel" or not is their own choice. Personally, I'd rather see them leave the hobby in disgust rather than have to put up with their pompous, arrogant, superior egos, on the bands. That type of grandstanding does nothing good for the hobby. Get over it, move on, or move out. Simple as that.

>

>
> Agreed but I don't need to throw in a towel, sell my gear or to like any
> one of them.

That's up to you. Stay if you want, but don't preach to the newcomers how much "better" you are simply because you mastered an obsolete telegraphy skill. It won't mean much to the guy designing digital audio compression algorithms.

>
> > Bottom line: your opinion is irrelevant. The law is the law.
>
> Oops. You don't get to decide what is irrelevant and, in this case, the
> regs are the regs.

The regs say that new hams need only pass 5 WPM to become licensed for the whole anchilada. Therefore by extension, whether or not you believe that they are "real" hams or not is irrelevant. It's not up to me to decide it. The FCC already has.

>
> > >

>
> Dave, I've passed all the written exams and a 20 wpm code exam.

Whoopie! That and buck will get you a cup of coffee and 2 hot dogs at the local mini-mart. It's a shame that all that testing and code skill haven't taught you to be more accepting of differing viewpoints.

> I've never settled for mediocre in anything I've wanted to do in this life
> and I've never asked for anyone to make something easier for me because
> I couldn't handle it.

And if everyone thought like you, we'd still be shoeing horses, lighting flares at intersections, when we cross, as well as doing a lot of obsolete things. At some point, the rules have to change to track with improvements in technology. At some point, we have to acknowlege that morse telegraphy is just as old and obsolete as horses and buggies. So at what point do we finally stop testing for it? Do we dogmatically continue to test for CW into the 24th century when people are Star Trekking around the galaxy? No one is demanding "easier access" to ham radio, just access that is more in line with the technology of TODAY. You can give me the toughest theory exam that is relevant and I'll study for and pass it, because that is what is required TODAY.

I am a man of principles. I just couldn't see the relavance of CW. I refused to allocate slots of my precious time, to learning a skill that was of NO use or value to me. I had a choice. I could either give in, and waste time learning it,for no reason other than to get over a "hurdle", or be satisfied with technician plus privileges. For 18 years I have been satisfied. I knew that this day would come eventually. Now it's here. All I can say is "it's about time!"

It's unfortunate that the FCC didn't revamp the theory tests. They are way too easy now. I passed all of the current the internet sample tests without even studying them first. But it seems that the FCC is mostly interested in making their administrative jobs easier.....

It's not that. It is true that technology has changed, and has gotten
better, but at the same time, more difficult to troubleshoot and repair.
I don't think that anyone would fault a person, who is technically
proficient at TODAY'S technology. I would LOVE it if there were MORE
guys like that around. The PROBLEM is that many (most) newer hams are
not proficient at ANY technology. You don't have to be a techno-whiz to
be a user, and that's what most guys are these days.

It's true that homebrew rigs could not hold a candle to what the "big 3"
from Japan can mass produce, but there are many things that could be
"invented" to interface with, connect to, amplify, convert, transvert,
digitize, etc., that the technically adept should be able to master. It
just doesn't seem to be happening in all but a few small circles.

Lets keep the technical aspect of ham radio alive. THAT is what makes us
special.

Ah! the old argument, should we compromise the QUALITY of the ham,
simply to increase the QUANTITY of hams?

We have a radio service that appeals to a much broader range of people,
and not necessarily technically adept. It's called CB. CB is a prime
example of what happens when you let the general public "play radio",
sans any testing.

I would rather keep a technical bent on ham radio so that (hopefully)
the people that remain tend to be more civilized, and less likely to
turn ham radio into a larger extension of 75 meters, or channel 19.

I know this thread derives from someone else who nitpicked on your use of the word "chow" -- I just want you to know that when I responded "Ciao, dude" it was done with the intention of putting another smile on the faces of those who knew the dictionary spelling but kept to themselves; it was a wink to them and a toast to you, nothing more. Everything about your message was great -- the heading, the content, the "Joe Cool" name, the "CHOW!", the crossposting, the Friday afternoon timing, the millennial good cheer. Just a fun signal to quit work, get out of Dodge, celebrate life a little, and embrace the future. I appreciated it at the time and still do.

I just purchased a Titan deadbolt that has the auto open genie/intellicode feature. I love it except for one thing. The tiny key transmitters don't have much range!
Is there anybody out there that has some technical knowledge of how these systems work? I would like to boost reception or signal or both so that the transmitters work from inside a car for example.

The ideas I have thought of are:

Boost battery voltage?

Increase the size or shape of transmitting antenna?
Modify the receiving antenna?

An external repeater that would receive the signal and retransmit it with a stronger signal?

Thanks,
BDS

Yes, new callsigns should be restructured too. They should look like the old CB callsigns of the early 1970's. This will work out OK because the restructured hams won't be much smarter than your typical CBer anyway.

Unfortunalty you CANNOT listen to cell phones with this type of scanner. Not sure about pagers but why want to? all you get is random phone numbers. Only mod availble, wich I have done, is the backlight mod. You can open up the scanner and hook the light up to a switch, or ven make it so it is on the entire time the sacnner is one. Dont have the address anymore but if you really wanted I would be able to opne up my scanner and tell you the wires to attach and where.

Unfortunately, the "best" charges are only misdemeanors in California
for this type of nonsense. At least, that's all the CHP can charge the
Southern California moron with - even though we have documented hundreds
of illegal transmission on several frequencies made by him.

I had a similar problem with my UBC3000XLT. The low battery alarm was on
nearly all the time even though the battery lasted the normal time.
It turned out to be faulty contacts in the charging socket so that a
forward biased diode was in series with the battery. That would have the
effect of dropping the voltage enough to activate the alarm.

I suggest you look for something that could drop the battery voltage
slightly.

Is it possible one could bid up his own item? You bet, it does happen.
I have seen it personally in an auction for a CD. They were so careless
they were bidding from a diferent sub-account of the same AOL address-
in other words, the bids originated from the same computer that the
auction was posted from. I complained to ebay and they got
suspended- but, as Schwartzeneger said (sorta) "they'll be back!"
You really have to screw up repeatedly before geting totally banned.
Ebay is a sellers paradise, not quite such a good deal for buyers.
If you know the value of things and don't go ever a reasonable limit,
you can do fine, but you will lose a lot of auctions to people who
haven't got a clue. Some of the end prices on some of the auctions
are outrageous. But there are occasionally bargains to be found-
if nobody else happens to be bidding against you :-) I figure that
the great majority of overbidding comes from bidder ignorance
or just plain bidding fever rather than any bid-rigging, but it probably
does happen. Some people get sucked into bidding wars and just
have to 'show' the other guy and make him pay dearly for trying to
'steal' their prize. Remember the old Pogo adage- "...we have met
the enemy and he is us!"

I am buying old DIRECT TV DSS systems that you no longer use. I will purchase access cards by themselves, receivers with access cards or complete systems. Please email me with the receiver brand or model and which type of access card it has. If you are unsure, let me know the number below the bar code on back. It should start with "H", "HU" or "F". I'll be able to determine what type it is from this information and can make you a prompt offer.

Thanks,

Mark

*
*
*
*D
****

If you took time to read the original docket you may have read the section where they sought comment on how many license classes should there be. The FCC even last August was leaning the the possibility that three classes of license was a possibility. There is no blame on anyone. This i ssomething that was bouond to happen. No matter how unpopular it may be it was going to happen. At this point you have only two options, accept it and keep operation or reject it and let your license expire.

*>
*>
*> *
*> *
*> *NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new
*> *millennium. The FCC today issued its long-awaited Report and Order in the
*> *1998 Biennial Regulatory Review of Part 97--more commonly known as
*> *"license restructuring." The bottom line is that starting April 15, 2000,
*> *there will be three license classes--Technician, General, and Amateur
*> *Extra--and a single Morse code requirement--5 WPM.
*> *
*> *"We believe that an individual's ability to demonstrate increased Morse
*> *code proficiency is not necessarily indicative of that individual's
*> *ability to contribute to the advancement of the radio art," the FCC said.
*> *
*> *Besides drastically streamlining the Amateur Radio licensing process, the
*> *FCC said its actions would "eliminate unnecessary requirements that may
*> *discourage or limit individuals from becoming trained operators,
*> *technicians, and electronic experts."
*> *
*> *Although no new Novice and Advanced licenses will be issued after the
*> *effective date of the Report and Order, the FCC does not plan to
*> *automatically upgrade any existing license privileges. The
*> *ARRL had proposed a one-time across-the-board upgrading of current Novice
*> *and Tech Plus licensees to General class, but the FCC declined to adopt
*> *the idea. This means that current licensees will retain their current
*> *operating privileges, including access to various modes and subbands, and
*> *will be able to renew their licenses indefinitely.
*> *
*> *Starting April 15, 2000, individuals who qualified for the Technician
*> *class license prior to March 21, 1987, will be able to upgrade to General
*> *class by providing documentary proof to a Volunteer Examiner Coordinator,
*> *paying an application fee, and completing FCC Form 605.
*> *
*> *The FCC's decision not to automatically upgrade Novice and Tech Plus
*> *licensees means the current Novice/Tech Plus HF subbands will remain and
*> *not be "refarmed" to higher class licensees as the ARRL had proposed. The
*> *FCC said it did not refarm these subbands because there was "no consensus"
*> *within the amateur community as to what to do with them.
*> *

*> *As it had proposed earlier, the FCC decided to lump Technician and Tech
*> *Plus licensees into a single licensee database, all designated as
*> *"Technician" licensees. Those who can document having passed the 5 WPM
*> *Morse code examination will continue to have the current Tech Plus HF
*> *privileges. "If documentation is needed to verify whether a licensee has
*> *passed a telegraphy examination, we may request the documentation from
*> *that licensee or the VECs," the FCC said.
*> *
*> *In addition to reducing the number of license classes from six to three
*> *and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
*> *number of written examination elements from five to three, authorize
*> *Advanced Class hams to prepare and administer General class examinations,
*> *and eliminate Radio Amateur Civil Emergency Service (RACES) station
*> *licenses. RACES will remain, however. "After review of the record, we
*> *conclude that we should eliminate RACES station licenses because RACES
*> *station licenses are unnecessary for amateur stations and amateur service
*> *licenses to provide emergency communications," the FCC said.
*> *
*> *Under the new licensing scheme, there will be four examination elements.
*> *Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-
*> *question written test to obtain a Technician license; Element 3 will be a
*> *35-question written test to obtain a General license, and Element 4 will
*> *be a 50-question written test for the Amateur Extra license. The FCC has
*> *left it in the hands of the National Conference of VECs Question Pool
*> *Committee to determine the specific mix and makeup of written examination
*> *questions. Current Amateur Radio study materials remain valid at least
*> *until the new rules become effective in April.
*> *
*> *The FCC's new licensing plan means someone will be able to become a ham by
*> *passing a single 35-question written examination. The plan also simplifies
*> *and shortens the upgrade path from the ground floor through Amateur Extra-
*> *-especially since amateurs will only have to pass one Morse code test.
*> *
*> *Elimination of the 13 and 20 WPM Morse requirements also means an end to
*> *physician certification waivers for applicants claiming an inability to
*> *pass the Morse code examination due to physical handicap.
*> *
*> *The effective date provides a window of upgrade opportunity for current
*> *Advanced licensees. Between now and April 15, current Advanced holders may
*> *take the existing Element 4B, a 40-question test, giving them credit for
*> *having passed the current Extra written examination. Likewise, holders of
*> *a Certificate of Successful Completion of Examination (CSCE) for Elements
*> *3B or 4B dated on or after April 17, 1999, will be able to qualify for
*> *General or Amateur Extra respectively when the new rules go into effect on
*> *April 15, 2000.
*> *
*> *The FCC disagreed with the League's suggestion that it undertake a
*> *restructuring of operating privileges along with licensing restructuring.
*> *"We believe that in light of ongoing discussions concerning implementation
*> *of new and more modern communications technologies within the amateur

*> *service community, we should accord the amateur service community an
*> *opportunity to complete such discussions and possibly reach a consensus
*> *regarding implementation of new technologies before we undertake a
*> *comprehensive restructuring of the amateur service operating privileges
*> *and frequencies," the FCC said in its Report and Order.
*> *
*> *In its amendments to Part 97, the FCC's Report and Order refers to a "Club
*> *Station Call Sign Administrator," something that does not exist under the
*> *current rules and which was not explained in the R&O itself. An FCC
*> *spokesperson said the Commission plans to issue a Public Notice soon to
*> *explain the program and to solicit qualified entities to serve as call
*> *sign administrators for club station applications.

Yeahaaa....Thanks Rich, just got it today. Picking up some of the "stock" police channels on the svc band. This is really cool!!!! I think I'm pickin up the Chicago police....and I'm 30 miles out from Chicago. I never expected to pick up stuff from that far away.

I read your review and stuff (not all of it yet) and it has answered a number of questions that I was going to ask here. Thanks for the good work.

Has anyone been able to get "SmartScanner" software to work
with their Uniden SC200?

According to the Operating Guide I should be able to use
the scanner on one COM part, and the modem on the other COM port.
This will allow me to download frequencies from Uniden based
on my zip code. (I know, get the books, visit the WEB sites....I just
want to see how complete Uniden's list is.)

However, the scanner errors with "Modem Error".
The SmartScanner software errors with "Unable to open serial RS232
connection".

I'm able to use the serial port (COM1) with another application.
I'm able to use the modem (COM2) with another application.

I've matched up the communication parameters between the
scanner and the serial port.

Can anyone help??

Thx!

For those scanner folk that might not know about hams and their
propensity for hunting transmitter. Here in SoCal we have formal hidden
transmitter hunts mostly on 2 meters (146.565) every week end. These
range from "easy" hunts lasting an hour or two to the monthly "All-Days"
that last a couple of days and may have multiple transmitters as far
away as 800 miles. BTW, I don't know of any scanner folk participating
in thest hunts, but since the hunter never transmits, only receives, no
licence is required to enjoy this faction of the radio hobby.

PARG is not your posting host Toilet-Boy. This is just typical John-Bowl deception and lies, the correct place to send complaints is abuse@home.net. Why else would you Toilet-Boy snip it out in your reply to Mr. Kendrick and not repeat it in this message. Why else would AT&T paste the line:

X-Complaints-To: abuse@home.net

into your header Toilet-Boy? You don't post from the PARG domain, your posting host as captured from your header is:

NNTP-Posting-Host: 24.0.49.240

That isn't PARG, is it Toilet-Boy? It's @Home, your IP address John-Bowl. Translates to:

37904-a.potlnd1.or.home.com

Why are you trying to convince people to complain to PARG? Deception Mackey-Bowl, pure and simple. You have lost more ISP's than you can count on one hand John-Bowl. If you hadn't you wouldn't be hiding who your ISP is. You friggin liar!

In 1990, there were 100 homicides in City X. Supposed that number decreased by one each year. Hence, there would have been 91 homicides in 1999. Sure, that's a 9% decrease in homicides, but 91 folks are still dead. I don't believe that decrease in the "crime rate" has made them feel any less dead.

Message-ID: <387627DD.855D6211@worldnet.att.net>
Source record: 97097

I got out an old 8' long fiberglass
deep sea fishing rod and put a nut in the base, wrapped 104" (1/4 wave)
of 12ga
solid copper wire to the very tip (windings about inch and a half
apart) and connected the wire to the nut at the base via a bolt. I
connect the center coax wire to that right? Where do I connect the
shield of the coax? It will be mounted on my roof via aluminum conduit.
Also if I wrapped 208" around it would it work as a 1/2 wave or would
the windings be too close?
Your help will be mucho appreciated!
Thanks,
Ken A.

Source record: 97098
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Very Bad!!!

What you MIGHT be able to do is get one of the old AM/FM/CB
antennas that have been destroyed. If it's a 'disguise' antenna,
forget it. But if its a "CB" antenna with a 'matchbox' to make it
hook to all three, chances are the matchbox is a CB pass filter
to the CB radio, and a CB block filter to the AM/FM radio.

If that's the case, you could use that to hook up both and have
a reasonable expectation of it working, and of you scanner
continuing to work after the first time you transmit.

But I should warn you that if you're at the point where you needed
to ask this question, you need to find someone a LOT more
competant to check out any mathcbox you may find to do this,
or you're risking a lot of damage.

Mike

880. Pro-51 intermittent volume problem

Newsgroup: rec.radio.scanner
Date: 2000-01-07 00:00:00 UTC
From: markgard@iNOSPAM.ix.netcom.com
Message-ID: <855blm$he1$1@nntp9.atl.mindspring.net>
Source record: 97100

I'm experiencing intermittent problems with my Pro-51 volume control. Occasionally while it's scanning, I notice that I'm not getting volume. A look at the display shows that it is indeed locked on a frequency. Often, turning the volume know to max will solve the problem. Also, turning the unit on or off does the trick too. I used tuner cleaner to no avail. There is no audio "scratchyness" when I adjust the volume knob.

Finally, I think I started to notice this after the unit was dropped. (Moderate drop, 3-4 feet on wood floor, no apparent damage, etc.)

Any ideas or thoughts? Thanks

David:

Yes, what you say is quite true. During my regular stays in Argentina
over the years I would often listen to the SW bands. It was quite
stunning to tune through the CB channels and hear regularly spaced peaks
of noise and essentially noiseless spacings resulting from untold
thousands of CB'ers piled together and transmitting simultaneously.
Occassionally, "How 'bout it skip land, Texas trying." or some such
emanation could be heard making it's way out of the mess. Similarly,
the FM studio-transmitter link transmissions from WFLA on 25870 kHz were
heard daily from morning till night with exceedingly strong signals.
Surprizingly, the amateur 10 meter band at the same time was completely
devoid of activity besides the strong beepings of low power amateur CW
propagation beacons from the US---I guess amateur radio mythology
promotes the belief that the sunspot minimiums preclude communications
on 10 meters.

That conclusion makes absolutely NO sense. What's the point of informing other police officers, who are presumably interested in protecting each other and in getting away with their own misconduct (according to your reasoning), that an officer is misbehaving on duty? Do you think that is going to cause the department to take better disciplinary action? Or are they going to be more interested in investigating how a civilian got onto their radio channels? Hmm. Lemme think....

If you want to report police misconduct, use a telephone. If you're more interested in publicity, take pictures. Write letters to the newspapers. Post information on the Internet. A police officer's alleged violation of department policy (or your moral standards) does not warrant the criminal act of transmitting on police frequencies without authorization.

regarding digital spread sprectrum, it is a different technology probably based off an alogoritm and a base, old cell phones are not digital, and cannot be listened to and anything that is digital spread sprectrum needs a decoder, probably programed as a cmos with the alogorithm and a computer to analyze the signal, but because of the encryption possibilities, decoding is particularly annoying and not to be done..... the source code for that digital first needs to be analyzed and cracked on a controled signal.

oh, and another thing, i cant spel....

otherwise, don't bother too much work to get it down, check out a patent office for details on spread sprectrum technology.

Yes, there is a great risk to the scanner. Unless you have to use both radios to monitor at the same time, consider using a coax switch, so that with a twist of a knob you can change which radio is using the antenna at a given time. Daiwa made a pretty good two-position coax switch for about $20 or so not too long ago -- I have a couple of them (one to facilitate switching between my FT-7 and HW-9 HF transceivers, and the other to switch my 2m antenna between the HTX-242 mobile and the packet system I have set up), and they work nicely.

At a guess, the top end of the volume control pot. Or has the signal
been mangled before that?

I'm curious, how does the amateur radio community help police locate these
folks? Are they (or you) using, Operating, monitering these freqs?
Foxhunting on police bands? how does that work? See Above... "the suspect
will be suspect"
exactally what does that mean?
get a life... talk to your friends on the bands and quit playing detective...
dont make yourself out to be something you're not. And assuming you have a
business of your own.... try minding it.

You apparently suffer from a lack of self-esteem.

If YOU are a courteous operator with wide, deep technical knowledge,
then YOU are a valuable radio amateur. One could match my description and
hold a General license or below, or even no amateur license at all if you
worked, say, in military or commercial communications.

But it seems that this isn't enough for you. You crave that piece of paper
which says "Advanced" or "Extra" on it, not because of what YOU are and
what YOU have accomplished, but rather because of the mark the LICENSE
PUTS ON YOU, because of the "specialness" it confers on you, because of
the "distinction" which you believe it will afford you.

If that's all you want, just have a fancy, official-looking embossed piece
of paper framed and put on the wall next to your $3000 general-coverage
receiver. Only a tiny handful of people will know the difference.....

And as the congressional "Church Committee" hearings of the 1970s
revealed (named after their chairman, Sen. Frank Church of Idaho), the NSA
have in fact "snooped" on purely domestic targets in the past.

Really? Tell that to HAMS that are allowed to transmit thousands of watts on 10 meters, but cannot legally buy an amplifier that puts out that much power.

i couldn't agree with you more, and think i just might sell out, they are
just giving the bands away, but one thing, at least they are keeping some
code, that will still keep some of the cbers out, but 75 meters allready
sounds like 11 meters anyway. i got my extra back in 1989, and passed all
the code requirements, and i am blind on top of all that.

: > : Sgt. Rock
: >
: > The amateur radio community helps police locate these folks. It is
: > highly illegal, and with the current FCC attitude towards enforcement,
: > you should see more folks facing federal charges.
:
: I'm curious, how does the amateur radio community help police locate these
: folks? Are they (or you) using, Operating, monitering these freqs?

It is much the same tactics that the military uses. Monitoring frequencies
the using direction finding equipment to track down the suspect. When
the suspect is located, law enforcement is informed. They get a warrant
and wait until they are interferred with again to raid the suspects home
or business.

: Foxhunting on police bands? how does that work? See Above... "the suspect
: will be suspect" exactally what does that mean?

Foxhunting is DFing. Hams have made a game out of it. Then use
the skill to track down those who jam our frequencies.

The other comment looks like a typo by Sgt. Rock.

: get a life... talk to your friends on the bands and quit playing
detective...
: dont make yourself out to be something you're not. And assuming you have a
: business of your own.... try minding it.

Our frequencies are under attack. Plus hams have the skills, the knowledge
of
electronic and of the law, to help the police. Often hams are called on by
the
local law enforcement agencies to help with various emergencies. Many hams
also belong to their local emergency management organizations.

All citizens have responsibility to maintaining the peace. Hams, more than most, have a deep respect for the law given that our hobby is tied to it.

910. Computer control

It is possible, but it will take some electonics skill. Essentially, you have to build a circuit that will electronically push the Manual button for you. The general concepts are similar to the PROgramit interface. You can read about it here: http://www.qsl.net/ka2pyj/

I don't have any more info, but I do remember a Bill Cheeck article in Monitoring TImes about 4 years ago that talked about this conecpt.

Don't have to tell that to a HAM. Have been one over 25 years. Legal limit is 1500 watts on most frequencies for some classes of licenses, less for others. Check the rules on the amps from about 25 to 60 MHz. It is legal to buy one and it is also legal to sell one. Don't feel like looking up the rules just now to do the quots. There are many restrictions on them though.

Also notice that I said MOST FREQUENCIES.

Me? Neither problem 'nor solution. I sit back and think citizens should be just that. I could understand Hunting down someone jamming the ham bands...not the police bands. IF I wished to be a police officer then... "SEMPER VIGILANTIS"
sounds like "busy body" to me. Nothing wrong with neighborhood watch, but doing the jobs of civil servants is usually only done to be noticed. I question
whether or not you play fireman on the side, or help the roadcrews hold their shovels upright. I never read that any of the ideas or by-laws ..etc.. suggested helping to catch "bad guys" only to help in Civil emergencies ie: floods, earthquakes, and disasters that may Interupt communications.No?

If talents run so high then why are there not more Elmers? Better teaching would be hams to become more proficient at their hobby.
It seems so many people are griping over the new rulings. as if they want no more people on the air, and in the same breath state that the hobby is dying.

Personally, I live 21 miles from the nearest store, and it's in a town of 4000 We don't have such problems as city dwellers, we've all learned to be responsible for our actions, and help our neighbors out. Rarely do Govt. agencies need to be in OUR business.

'Course cops here don't randomly harass people, or sit them on curbs...etc. They still say "Sir" "Ma'am" here.

i feel that way sometimes watching the posts here in usenet. not just
in the ham groups.

anyone can go down to wally world and buy a computer and get on the
internet, but i don't ask them if they have any computer knowlege of
worth before i 'converse' with them.

interesting analogy. most of the people out here in the net are
appliance operators but noone 'blackballs' them.

people will visit websites that were 'generated' by an expensive program
just as much as a website built with notepad. the content is what
counts.

weird.

The amateur community has often been solicited for hunting transmitters
and interfering sources from cable companies, police, fire, FCC, (yes,
the FCC), cab companies, various service providers and the Feds. Where
else can you get a bunch of trained mobile operators with fully equipped
cars that will drive around like crazy without being paid?

Amateurs provide lot's of different services. Were not a phone company either but a friend of mine ran a phone patch to the Cleveland clinic back in the late 70's not knowing exactly who the person was at the hospital only that the phone patch was from a JY3 station, months later he received a personal thank you letter from JY1 himself thanking him for his assistance during a telephone system failure in Jordan.

But I guess were not a phone company so he should have minded his own business?

> sounds like "busy body" to me. Nothing wrong with neighborhood watch,

Wow, if I knew my local police department were being jammed I'd get a doppler system going ASAP, my family and communities safety could be at risk. That's VERY MUCH MY BUSINESS.

> If talents run so high then why are there not more Elmers?

Being an Elmer and helping one learn code and study to become a ham has nothing to do with talent, furthermore; the clubs I've seen that have fox hunts and specialize in DFing do Elmer, every time someone else joins the hunt. A group who did DFing in TN used GPS systems tied to a 2m link and assisted in finding a lost hiker in the mountains. This was the job of the search and rescue squad, I guess they should have minded their own business according to you eh? A ham found the lost hiker.

> Personally, I live 21 miles from the nearest store, and it's in a town of 4000
> We don't have such problems as city dwellers,

So since your environment isn't anything close to that of Southern California
where this incident occurred what experience do you have that allows you to
profess to the group what we should and should do with respect to law enforcement?

> we've all learned to be responsible for our actions, and help our neighbors out.

Wrong..it doesnt happen all the time. It is cause for immediate removal
from ebay and since the remaining bidder bid what he wanted to, he gets
what he bid for. the last minute "pumping/retraction" is sufficient
reason for removal. In some 1200+ transactions on ebay it has never
occured to me or on any thing I bid on.

A digital signal is converted to analog before it is transmitted, what you need is a way to convert it back to digital, and then process and convert it into audio to monitor it.

The original poster asked about DECT. DECT is digital using TDMA/TDD and operates at 1.8 GHz. No commercial equipment available today is able to intercept DECT, but with the right amount of time and money, anything is possible.

>> >Is there a way to get around the problem of listening to
>> >Digital Cordless telefones such as DECT?

Not really no.

>> >Does anybody know how to make it possible in a cheap
>> >way to listening to the DECT-traffic?

No. Cheap is definitely impossible.

>> >Any advice?

Forget it. Peoples phone calls are not that interesting anyway.

/Marcus

I found this on a web site,
thought Id share it.
Anyone have anything they'd like to add?

Downtown Phoenixville is on the EPA's
Most Hazardous sites list. The Water Has
deadly chemicals in it that they cant get rid
of no matter how much they try.
The newspaper 'The Phoenix' is being paid off by the officials and cops to not release all the murders
and crime.
There was a shoot out down Nutt rd at high speeds recently..
Do something. push the issue.
---
before everybody just shakes there heads about this,there is some truth here.in 1996 the epa started a program to help cleanup and revivtalize areas that were polluted.the program in short is called brownfields.brownfields because of polluted grounds actually staying brown.anyways in 1996 the epa listed a group of areas as pilots for this program.there was 40 all together.some of them included:NEWARK NJ,NEW YORK CITY,SACRAMENTO,ST LOUIS,PORTLAND,NEW ORLEANS,BRIDGEPORT CT,CHARLOTTE NC.and phoenixville pa.strange,the whole list is cities except for our little town.you expect pollution in major cities like this,yet our little town is rated just as polluted as any major city in the country.so basically the epa funded cleanups in these areas,except for one place.yep,you guessed it p-ville.why?well the epa says it is because all the land(stell factory site)was bought by a private entity.and this entity that was unnamed said they had a cleanup plan of there own.this was in 1996 everyone.have you seen anyone trying to cleanup the downtown area?i find this an outrage because one of the reasons phoenixville was picked along with major cities was because of the disadvantaged people who lived around there that the program would have helped.sorry,i'm rambling

---
we've all had suspisions about the phoenixville cops for years, i heard they planted weed in one of my friend's car when i was still in school.... and i swear that i hear gunshots and stuff late at night... the cops seem to be partial to the better-off kids and leave them alone, while harrassing everyone else, especially the few remaining skaters and anyone that looks like "one of those freaks" <-- that quote directly from officer pacifico's mouth by the way

as for the pollution, man, i was wondering why i have 5 nipples
it's a damn shame because i swim in that dam river

Here are some sites to look at:

http://www.worldlynx.net/w3bnr/twa800.html

Here is a story from the Inquirer:

A SEA OF CORN SYRUP IS SPILLED AS VANDALS OPEN 28 TANK CARS
By Reid Kanaley, Special to The Inquirer

Vandals emptied an estimated 400,000 gallons of sticky corn syrup late Monday from 28 railroad tank cars parked on a secluded siding in Phoenixville, borough police said yesterday.

Phoenix Steel security guards found the sugary syrup gushing from opened valves on the tank cars about 11 p.m., police in the Chester County community said. The guards discovered the sweet-smelling liquid pouring down a steep embankment and flooding a road through the steel mill property, according to Walter Cameron, manager of labor relations at Phoenix Steel.

"It was a massive spill, just like a lake of corn syrup," said Joseph Moore, foreman for the Phoenixville Friendship Fire Company. Moore said he sloshed through syrup up to 10 inches deep for more than an hour, going from tanker to tanker to shut off the valves.

"I shut 14 tank cars off, and I believe most of them were completely empty," he said.

A Conrail claims adjuster, who declined to give his name, was on the scene yesterday afternoon, although he said ownership of the track and cars was unclear. "I didn't realize (the spill) was this bad," he said.

The spill presented no immediate danger, although there was fear that it would draw a swarm of bees, officials said.

Officials spent much of yesterday trying to determine how to clean up the sticky mess along the quarter-mile of track. A decision was eventually made to pump it into tank trucks for disposal, according to Tom Flanagan, president of American Sweeteners Inc. of Frazer, owner of the syrup.

The cleanup began about 5 p.m. and was expected to take at least a week, Flanagan said. He declined to say what the spilled syrup was worth.

A youth at the scene yesterday afternoon said a group of teenagers from the neighborhood had dumped the tankers' contents "just for kicks."
Phoenixville Police Sgt. Raymond Mattis, whose department was investigating the incident along with Conrail police, said yesterday that he had names of several suspects but that there had been no arrests.
Police said bolts that locked the valves had been loosened.

The tankers, each holding 17,000 gallons of syrup, had come from the Midwest and were parked on the siding to await delivery to American Sweeteners. Neighbors and some officials said they feared that the spill would attract swarms of bees. A similar suspicious spill from a single tanker at the same location 10 days ago drew a swarm that required Phoenix Steel to hire an exterminator before the syrup could be cleared.

"There's going to be a lot of bees," warned Russell Matthews, 16, who lives on Vanderslice Street near the railroad yard. The last time, he said, pedestrians had trouble crossing the Franklin Street bridge over the site. ''You had to run through there. There was just this dark patch of bees."

Mattis said there was no bee problem yesterday, probably because of the light rain and cool temperatures.

PHILADELPHIA INQUIRER
Saturday, December 22, 1984
UNDERGROUND FIRE BURNS AT SITE OF SYRUP SPILL

By Reid Kanaley, Special to The Inquirer

A fire has smoldered underground for weeks at the site of a massive corn- syrup spill in Phoenixville, and a spokeswoman for Phoenix Steel Co. said it was still spreading and could cost $1 million to put out.

Yesterday, acrid white smoke and steam continued to spew from a dozen holes in the ground along a 200-foot stretch of abandoned railroad track leading into the north side of the Phoenix plant.
Officials interviewed yesterday differed on what could have caused the fire.

The Phoenix Steel spokeswoman, Pam Nichols, said the company believed that the fire started when some of the 400,000 gallons of corn syrup that was spilled in September seeped underground and ignited after fermenting. Vandals spilled the syrup from 27 tank cars parked on an adjacent Conrail siding Sept. 3.Nichols said that after the fire was discovered, during Thanksgiving week, local fire companies tried to douse it with 600,000 gallons of water. Instead of going out, she said, the fire has spread, moving about 30 feet in the last week.
The fire is apparently being fueled by waste coal and slag from Phoenix Steel's production processes. The tracks run along a 20-foot-high embankment of the material, Nichols said.

Officials at the state Department of Environmental Resources (DER) said that fermenting syrup could not have generated enough heat to ignite by itself, but that the fire could have been touched off by heat from equipment used during the syrup cleanup.

However, Dennis Zimmer, marketing manger for the cleanup firm, Waste Conversion Inc. of Hatfield Township, said the fire did not start until ''after we stopped the job" in late October.

The only sure way to put it out, Nichols said, is to dig it up with heavy equipment and douse it, an effort whose cost, she said, "may now approach $1

million."

Bruce Beitler, an operations supervisor for DER's Norristown office, agreed that excavating the fire might be the only answer. "I really don't think it's going to go out by itself," he said

But DER spokesman Ron Thomas said the agency had not "firmed a position yet" on what should be done about the fire and who should do it.

The blaze apparently poses no imminent danger, although "when people see smoke coming from the ground, they think Centralia," Thomas said. He was referring to the central Pennsylvania town in which underground mine fires have raged out of control for 22 years.
Beleaguered Phoenix Steel, which is in bankruptcy proceedings in federal court in Wilmington, filed suit there Dec. 12 against Conrail and the five companies that owned the syrup in an effort to have them to pay for putting out the fire and completing the cleanup
Nichols said the company was also pressing for the cleanup of a plant roadway that had been flooded with syrup. Sand dumped to soak up the syrup has yet to be removed, and the road is now "a mess of potholes, and it's impassable," she said.
Waste Conversion Inc. this month filed suit in Chester County Court against the same five syrup companies to recover nearly $440,000 in unpaid bills connected with the cleanup. In October, Phoenixville police listed total damages from the spill at $841,000 and charged a borough man, James Polarine, 21, with 29 counts of criminal mischief for allegedly masterminding the vandalism with two teenagers.

Polarine is free on $5,000 bail and awaiting trial

I shall keep you all posted about further things I uncover.

---
all I wanna know is how did you guys get all that info on the epa and shit?? the cops on another hand are a different story.... they're screwy as shit half the time when they park near steel city they're no where to be found (not that I'd be lookin for them) and cops there have been dissmissed for misconduct(one of em was even caught doin some dudes wife while he was on duty) so there's a lot you don't know about them and they try to make sure you never find out.

Well, let me tell you, if you get a police scanner you hear what really goes on in that town!

I heard that cop who was screwing some guys wife go missing for an hour. The dispatcher was calling him and calling him!

They go up to your door in plain view of the prowler/suspicious person you just reported to ask you if "that person over there is the person you think is suspicious" leaving you open and vulnerable to retribution.

One night I heard prolonged sirens and then we heard a helicopter and so we looked outside and there was a helicopter flying over the area with search

lights and I was worried that maybe someone from Gratersford escaped so I called the cops and asked them what was going on......do I need to lock my doors? blah blah blah! The Chief himself called me and said in a slightly threatening manner, "You saw nothing, you hear me? There was NO helicopter!" then said,"So, you didnt see anything did you?" I said, "I guess not", because I was so weirded out by his tone. Nothing in the papers the next day, of course!

Where is all the tax money going? Not to fix anything, the streets suck!

Get a scanner people, get a scanner!

I'll be around!

---
yo, you saw the helicopter too, huh?? that same fuckin thing flew like 20 ft over me and my friend with them damn lights on... we were walkin over the tracks from port to mont clare and that shit flew over us with the lights and we dropped to the ground and it kept goin and then it turn around and started comin back towards us, so we just jet into the woods... in the meanwhile it was flyin over all of the "bad kids" houses in port, 'cause I called one of my friends and he was wiggin over the helicopter before I even said anything about it. And they knew what the were doin, cause it's not like they were goin somewhere, 'cause they kept changin course... I think that the local cops (upper providence, phoenixville, etc.) are teamin up like when p-ville busted the north a few months ago. there are more p-ville cops showin up in mont clare (we have different counties. p-ville is chester, m-c and port is montgomery) and vice versa. If you got to see it close enough you'd see it was pretty hooked up.

Hi all -

I'm writing from www.trafficstation.com. Check us out on the web; we provide free and subsccription traffic reports in over 20 cities. I'm currently hiring in our Downtown LA office for online traffic reporters. Need people who can listen to scanners (we have two bearcat 9000's) and also find good sites on the web for news and traffic to report.

We pay $12/hour, and have full and part time shifts available. Full benefits for full time employees.

Please contact me by email at stacy@trafficstation.com.

Hope to hear from interested job seekers soon!

Stacy Franklyn

941. PRO-92 Helped in Unique Situation

I am by no means an expert and this message may seem simplistic to most of the readers of this board.

I live in a small town in North Texas. Out local EMS is part of a regional SmartZone system. I had a pro 90,91 and 245xlt and returned them all because they were no good to me with my unique trunking situation. After help from Lindsay Blanton and others, we discovered the problem. My county EMS utilizes what is called a "VOC" application, that is a voice only control channel. In other words all communication comes via voice on the control channel and never on the other frequencies. Squelch is broken on the control channel for communcations. The Pro-92 has allowed myself and quite a few others in the county to finally monitor this system. We had to only input the control channel with the proper talkgroup ID, which in this case was only one ID for dispatch. In a closed mode bank along with conventional frequencies [which are in FM mode], with only trunked frequency programmed being the control channel[MOT mode], when traffic occurs the PRO-92 breaks squelch perfectly and we do not miss a thing. It works fantastic. This may be the only place in the country where this situation exists, but if your SmartZone utilizes "Voice Only Control" channel mode, you now have a solution.

They do it all the time here, the thing is that most of the time they
are only pirating the freqs to tell the truth. For instance one I like
instead of "officer down" is "officer UP" because they caught one
getting a lewinsky in the patrol car not long ago.The point is pirate
radio helps keep of informed of everyone that's getting blown away on
the peoples pay role.

WTB a DEAD Pro-50 hand held scanner.

I have one that works great but the cosmetics are pretty bad. I'm don't care if you lost the rubber duck but It needs to have a decent case (good shape), the battery pack and the battery cover. Belt clip would be nice. Email price including shipping to 37864

Dead Pro-50 only.

I don't believe they "control every computer software maker." Software companies market products with encryption all of the time, without NSA approval. The problem is exporting products with encryption, which are considered "munitions."

Even now, Congress is slowly starting to loosen those controls. Meanwhile, the FBI is trying to tighten them those controls in order to get a backdoor in software, telecommunications and other digital media.

Of course, I have no inside knowledge of the NSA so to be safe I suspect them of everything evil.

In other words, these back doors don't exist yet. The NSA WANTS them, but I'm quite confident that most companies will tell them to go F off. ANY back door puts their products in a compromising position and would be foolish to do.

It's just smoke. Don't worry about it. It won't happen.

I personally have decided that Grove is NOT FOR ME. I notice L.V.H. from Grove occasionally appears here and on TrunkCom to *defend* his products; such as, a post he made saying he didn't see where the PRO-92 was bad because he sold "100's" of them and only 1 or 2 were returned. Yet when you attempt to contact him (at least by e-mail) to ask to explain this further (I truely wanted to know if I should have held on to my ?defective? [yea right] PRO-92), you never hear from him again... that is unless it is defending Grove again.

Yes indeed, its all in the best interest of Ham Radio..sure it is! Look guys, it has nothing to do with the CW requirement. I am 110% in favor of the CW requirement, but the truth is Ham Radio began its demise when the FCC stopped conducting exams. We all know that the VE system is of questionable integrity. You can read about bogus testing sessions every month in QST and other Ham rags. And those are only the ones that got caught! Just think, now any half brain dead idiot can go into a VE session, conducted by his buddies, take a 35 question exam, which he already knows the answers to, and come out an Extra! And this is GOOD for Ham Radio! Somebody explain that to me. Or should I say "rationalize" that to me. I may not be the nicest or smartest Ham in the world, but I'm sure not stupid either. This is definetly The End of Ham Radio. Do you really want to be associated with persons holding Extra tickets who do not know the difference between a 9 volt battery and an oak tree?
I don't.
I guess I must be confused, but I always thought if I EARNED something, it would have value to me and I would respect and take care of it. How much value can you place in an amateur radio license that is easier to get than a parking ticket?
Good bye Ham Radio, it was nice knowing you.
K2TL

Agreed! But I would INSIST that the written test be comprehensive, and
related to the current technologies. The WRITTEN test is what's
important. Unfortunately, the way the current tests are structured,
makes them little more than a formality.

> Perl on the Internet than Java.

As far as my comment about the internet being too easy, I was refering to it in the context of a communications medium, It does not take a java whiz, or other programming skills to load some copy of voice chat software into a mickey-soft computer and be able to "reach out and touch someone".

Like ham radio, the computer hobby has people that are users, and there are the "geeks" that know the intricate details of TCP/IP, ATM, and various other networking schemes.

But as far as from a purely communications standpoint, communicating world-wide on the internet is as easy as pointing and clicking. There is virtually NO challenge to it. Ham radio, on the other hand, has many variables that make the pursuit of DX, challenging. And THAT is where the enjoyment comes for the majority of radio ops. If you can't grasp that concept, then you're probably better off on the internet.

Dave

> Supreme Court review and rulings.

Zoning laws are superceded by federal law in most cases. Zoning restructions can be challenged and overturned if one has the desire (and money). CC&R's are considered "voluntary" contracts. Still, with the availability of "ham friendly" neighborhood, slowly declining, while the population of hams will be increasing, there may be some legal challenges to CC&R's as well. Stay tuned.

> propagated world wide on the HF bands at the eleven year sunspot maxima
> make citizens and governing bodies of the US appear as chumps and cause
> a loss of face in the global community.

The US is already viewed as "chumps" by a great percentage of foreign counties. As to your assumption that "CBers" will be on HF, that has not be substantiated, and is only a paranoid supposition.

> 3. With the expected increase of operators will the FCC impose a reduce
> power limit so as to maintain appropriate RF field intensities in areas
> of human habitation---for the children.

We already have power, and RF field guidelines which every ham should be aware of. It is up to each individual ham to construct his antenna system to concentrate the major RF power away from habitable space. Hams should, as a rule, use the minimum power necessary in any case.

> 4. Statistically speaking, will the increase of illegal activites that
> will accompany the increased population of amateurs be managable by the
> FCC---if they can't afford (funding, manpower) to manages the mess that
> they created what then.

They can't seem to "manage" what we have now. More hams will only make the job tougher. Ham radio is only a mirror of society itself. When we live in a society that encourages parents to not correct their children, lest it damage their "self esteem", it's no wonder we have so many

people that are quick to ignore rules and regulations.

> 5. What restrictions in advanced design of amateur equipment will be
> imposed now that manufacturers have been stimulated to produce by the
> creation of larger market demand.

That's a strange question. Actually, I would be curious as to what new technologies and innovations can we expect to see now that the market is potentially growing. What new bandwidth saving techniques will be employed? What about digital audio?

I see nothing that would demand a "restriction" on designs. If anything, I see the opposite.

> 6. Will amateur radio disappear into the 'noise' by a future FCC Report

> channelized control of spread-spectrum modulation techniques to hide and
> get rid of the dirty little mess. Pass codes will be issued instead of
> callsigns to activate strictly regulated (FCC) communicators
> (ex-tranceivers).

That's a sort of Orwellian viewpoint. I think that ham radio should already be experimenting with SS techniques. There are alot of advantages to it. But forcing Hams "under a SS carpet" to hide the dirt, seem a bit farfetched. At least for now.

> 7. Will all amateur HF allocations be eliminated and relocated to
> spectrum translators aboard amateur satellites operating at milimeter
> wavelengts.

For what reason? That would also incure additional cost. People want cheap. HF is cheap.

Any analog scheme of auto identification can be thwarted by technically competant people. Once you are in a digital domain, it would get tougher. But I would hate to think that a digital encrypted ID scheme would have to be developed to deal with out-of-control hams. At that point I'd be out of the hobby.

>
> 9. Will we tire of 'smokey' reports from one end of the continent to

Only if you keep your rig on 27.185 Mhz.

> 10. To ease congestion, will amateur VFO's (slyda's or sliders) be
> eventually outlawed and be replaced by channel selectors.

They already are on most VHF radios. They may call them "VFO's", but they are just 5 Khz resolution PLL synthesizers. As to easing congestion. An HF SSB signal only needs about 2 Khz of bandwidth. Any channel selector that has less resolution than 2 Khz, would increase congestion, since it would force all of these signals into "clumped" channels, instead of allowing them to spread out.

> 11. Will older amateur equipment at some future date be outlawed as the

> be licensed in the US.

What country (especially a 3rd world one) has testing standards that are MORE difficult? We, the US, are actually LAGGING many other countries in reducing testing requirements, especially regarding morse code. It's funny that even 3rd world countries recognize that morse is an outdated skill, that is no longer relevant.

I think we are in agreement. In general, the Internet is easier. But not by much. How much harder is it to get a Tech license, buy a HT and talk to someone over a 2 meter repeater? IMO, not much harder than buying a computer, getting and setting up an ISP account, learning to use the email client and sending an email.

Don't fool yourself into thinking amateur radio is that much harder than the Internet for basic comms.

From: Bryan <bryan@cybernex.net>
Message-ID: <N7Rd4.25291$W2.315395@iad-read.news.verio.net>
Source record: 96946

Greetings from NJ,

My brother-in-law just handed over his PRO-37 scanner to me and said try to sell this for me - see what you can get for it. He does not have a computer nor internet access...

I own a PRO-26 Handheld and a PRO-2042 Base unit... I am not too familiar with the PRO-37 and its value...

I am pretty sure this in a Cell Unblocked scanner... It is in very good shape... Hardly ever used...

WOULD ANYONE HAPPEN TO KNOW WHAT THE VALUE OF A VERY CLEAN PRO-37 SCANNER WOULD BE??? Or would you know where I can find out?

I was looking all around www.strongsignals.net site to no avail...

Any feedback would be appreciated,
Bryan

The PRO 37 is cell capable with a diode clip. I would say it should have a value of $150-200.

On Ebay it would probably go for a $1000 or more :-)

If you check the rest of your Web site log, you'll probably see all sorts of other mass downloads from various sites. I was alarmed at first, but figured out that that they're Web crawlers of all sorts, trying to index the Web, gather information, etc. Since the info is publicly posted, you can hardly call it snooping--surfing, more like it--by a government agency. Now, if you've established a firewall, restricted areas on your computer, and you're still seeing disk activity, maybe then you can start worrying. But I'd say someone visiting your Web site (which is what you want people to do), does it matter that
they work for Jiffy Lube, the National Security Agency or Alta Vista? Nope.

Why are those who abound in ignorance the ones who make the most noise.
Ebay requires a credit card that is validated and an email address that
is stable, at least for the moment before you can open an account. You
are tracked by both the CC # and the email add. so if either show up on
a new user, his account is marked (sun glasses) and anyone (who has an
account) can trace the previous names and ratings. Beleive me, eBay does
everything it can think of to circumvent any scam that may be thought of
by crooks. If you don't like ebay, the ebay pricing or procedures, then
take it up with them, not with the good people using this service or
most of the people on this list(s) that have no interest in just what
you think unles it has to do with scanners, or radio or something with
electronics in it.

Why are those who abound in ignorance the ones who make the most noise.
Ebay requires a credit card that is validated and an email address that
is stable, at least for the moment before you can open an account. You
are tracked by both the CC # and the email add. so if either show up on
a new user, his account is marked (sun glasses) and anyone (who has an
account) can trace the previous names and ratings. Beleive me, eBay does
everything it can think of to circumvent any scam that may be thought of
by crooks. If you don't like ebay, the ebay pricing or procedures, then
take it up with them, not with the good people using this service or
most of the people on this list(s) that have no interest in just what
you think unles it has to do with scanners, or radio or something with
electronics in it.

While scalding, that was very well said Nick. I indend to get my license someday. This is a very VERY new interest of mine, and I go into this interest late in life at the ripe old age of 26. I'm going to be taking some electronics classes at a community college in the meantime. Your remarks while scalding, are well said...

If you want to know what something is worth, use the "completed
auctions" box on the ebays search page. All items of the search sold in
the last 30 days are shown with final prices.

Yes, it's true ... Congress (in its "infinite wisdom" legislated privacy of
over-the-air, in-the-clear cellular transmissions several years ago, and
recently reaffirmed and strengthened that legislation).

Yes, it's stupid. Yes, it's compeletly ineffective against anyone who
really, really wants to listen anyway. Yes, rules mandating that
cellphones contain proper encryption circuitry to REALLY meet
the public's expectations that their calls are/will be private would
have bee the sensible choice.

But then, we're talking about the GOVERNMENT here, so what
do you expect? :-)

If a Radio Shack 2006 hasthe full Otpo board installed is it possible to do DTMF and
CTCS decoding ? Or, do I still need to connect the Audio out JAck of my scanner to the PC soundcard ?

Thanks,

Joe

Hi guys,

What is the best software to use to control my AOR8200 Scanner ? Where can I buy the software and the interface cable ?

Also, the same question for the RS2006 if you are familiar with that one ?

Thanks,

Joegizjr@aol.com

There are only 3 bidders for this item, 2 of which have 0 feedback
which means they are either new users or fake persons.
The seller is also a new person with 0 history, I see SCAM written all
over this one. Just my opinion.

You can get the interface cable at any computer store -- either a
DB9 to DB9 or a DB9 to DB25 serial cable, depending on your
serial port -- nothing special about the cable.

Under normal circumstances, yes, but you also have resposibility to the
"community"
such as the minutemen of 1776 had to defend and protect his community.

I could understand Hunting down someone jamming the ham
> bands...not the police bands.
Perf., the police usually ask for help in these cases since
radio and communications are outside their normal areas of
expertise and knowledge. Hams have experience in this area
to a higher degree and so the police usually turn to the
Hams, its not like they are turning over the police dept to us
only asking us to solve a problem to help do their duty in much
the same way the police might ask a doctor to interpert data at
a murder scene to catch a killer.

IF I wished to be a police officer then...
> "SEMPER VIGILANTIS"
> sounds like "busy body" to me. Nothing wrong with neighborhood watch,

The exact meaing behind Semper Vigilantis is ALWAYS VIGILANT which is
the idea behind
neighborhood watch, most criminal types hate "busy body" SO:>

> but doing the jobs of civil servants is usually only done to be noticed.
Long hours at the Courthouse during a hurricane is no fun!!!

I
> question
> whether or not you play fireman on the side,
I am a volunteer firman in my community, WE DON'T HAVE THE LUXURY OF
PAID FIREMEN:<

or help the roadcrews hold
> their shovels upright. I never read that any of the ideas or by-laws
> ..etc.. suggested helping to catch "bad guys" only to help in Civil
> emergencies ie: floods, earthquakes, and disasters that may Interupt
> communications.No?
Wait for government to do it? Might not happen. See the purpose of
Amateur
Radio as set out in Part 97.1-to maintain a ready reserve of
knowledgeable
personnel in the Radio Arts.
>

WE teach, WE instruct and WE elmer. Not all hams are like that.

> Personally, I live 21 miles from the nearest store, and it's in a town of 4000
> We don't have such problems as city dwellers, we've all learned to be
> responsible for our actions, and help our neighbors out. Rarely do Govt.
> agencies need to be in OUR business.

Contridictions in terms my man, abound in the last paragraph. You say
you want Public Servants to solve all their own problems but you help
out your neighbors, who do think
is your POLICEMAN? Your neighbor (meaning somebody in your community) is
the
guy or gal who patrols the lonely highway, watches over property when
you are gone and
keeps his eye out for suspicious activity and assists at medical
emergencies.

>
> 'Course cops here don't randomly harass people, or sit them on curbs...etc.
> They still say "Sir" "Ma'am" here.
RESPECT MUST BE EARNED NOT TAKEN. If your local officer asked for help
(assuming you
are a licensed ham?) would you help? Or tell Mr. or Ms. Public Servant
to solve
his own problem? From what you have written, I would hate to see a real
emergency crop up in your area, of course, you could get out your
lawnchair
as you watch your "Public Servants" put the sand in the sandbags to stop
the
rising waters.

Perfidious, you are lucky to have lived in a place where there is no
crime, no
emergencies or fires. Your local Govt seems like they can do everything
and when
the day comes they can't, you will be the first person complaining. In
our wonderful
Constitution, WE THE PEOPLE is not merely a saying but a statement.

Martin N5PZJ
Proudly MARS, RACES, Volunteer Fireman and General All Around Active

I'm interested in a speech inversion descrambler to use with my 2006 or possibly even a hand held radio. How well do they work? I've seen the one advertised by Ramsey. does anyone have one and is it recommended? Any other ideas or sources for this item? I'm interested in a fully wired unit and not a kit. Any and all help would be appreciated.
Thanks,
Phil

I guess my reply to Andrew Koch's e-mail didn't reach him so I'm posting it here:
the formulas for 1/4 and 1/2 wave antennas (234/f 468/f) give
element lengths in feet.
For VHF and UHF multiply the result by 12 to get the length in inches
because they're so short at these frequencies. Also, you're dividing the
constants by the frequencies in megaHertz.
Sorry I wasn't more specific!

Unfortunately Dave, I havent got round that one yet.
I have noticed that by consuming a large amount of single malt 5 mins
before "thumbing" stops any sort of pain, but then any frequencies I
enter are NOTHING like what I was trying to enter :-)

A little game I like to play whenever I see someone else's R2 is to
try their func button, they all seem to be very stiff.

My Mrs says if the func button wasnt stiff she'd call the radio after
me. (small and not stiff hee hee)

*i couldn't agree with you more, and think i just might sell out, they are
*just giving the bands away, but one thing, at least they are keeping some
*code, that will still keep some of the cbers out, but 75 meters allready
*sounds like 11 meters anyway. i got my extra back in 1989, and passed all
*the code requirements, and i am blind on top of all that.
****

The code provision had to remain due to treaty. The ITU requires that all amatuer licensees operating under 30MHz must have proficiency in code. The ITU does not mention at what level is considered proficient. I got my Tech class license in 1977 and the 80 M band was not any better than it is now. I also have a BSEE degree and feel that element 4A and 4B are easier than many of the EE classes that I took. I just see no need for element 1B, and 1C. To me it does not mean I will operate on 3890 KHz any better or worse. Besides to operate on 80M phone you must have to operate with a general class license or higher. Until 4/15/2000 that still requires a minimum of 13WPM code. If I were to try and draw some conclusion from you post, it may seem that as one becomes more proficient in code, one becomes a better operator. BUt at this time I will try and refrain from such endeavor.

Shipping prices are out of this world!!

Used to be abel to walk in and purchase at advertised prices, but now
you have to pay the shipped price even if you walk in! Such a Deal

Good Deal

For the 8200 there sure is!!! He'll need a special connector and a TTL
to RS-232 either built-in to the cable, or an external device such as an
Optolinx.

nigel@gofree.to (Nige) writes:

>A little game I like to play whenever I see someone else's R2 is to
>try their func button, they all seem to be very stiff.

I visited my local dealer recently, and his demo Q7 had buttons
that were a fair bit easier to press than my R2. The Q7 also
made a more distinct "click" when the buttons were pressed.
This suggests to me that Icom changed switch suppliers somewhere
along the line.

I also removed the back from my R2 and looked inside with a
magnifier to see what happens when FUNC is pressed. The "button"
on the radio is really just a formed sheet of rubber that presses
on a switch mounted to the circuit board. The actuator on the
switch itself is a small white plastic thing with a fairly small
end. It takes very little pressure on the button on the case
to bring the rubber into contact with the switch actuator, but
the pressure causes the switch actuator to make a dent in the
rubber. It takes much more pressure from the outside of the case
to compress the rubber enough to actually make the switch change
position.

It seems that it might be worth trying to glue something thin but
stiff to the portion of the rubber button that contacts the switch,
inside the case. By distributing the force from the switch over a
larger area of the rubber, the rubber should compress less, and it
would take less travel and thus less pressure to actuate the
buttons.

However, actually getting at that area of the R2 requires taking
all the electronics out of the case, which involves some desoldering.
I haven't decided to tackle that yet. In this respect, the R2 is
unlike any other radio I own - the rest can be fairly thoroughly
dismantled without unsoldering anything.

Dave

On Fri, 07 Jan 2000 19:51:11 -0800, Bob <wolfbob@csnsys.com> had the audacity to say:

>Wrong..it doesnt happen all the time. It is cause for immediate removal
>from ebay and since the remaining bidder bid what he wanted to, he gets
>what he bid for. the last minute "pumping/retraction" is sufficient
>reason for removal.

Of course, due to eBay's silly authentication schemes, scammers have a virtually unlimited number of throwaway eBay accounts, so if one gets removed, all they have to do is create another.

And what *country* are those regulations for?

Owning an amateur transmitter without a licence is illegal in Canada.
It is *not* illegal in the USA as far as I know. Like many laws,
this varies from place to place.

For a part you are right Gill, but countries where scannerlistening is not allowed have no newsgroups too, so they look in newsgroups like this to find information about their country. Hope you don't mind. Happy new year,
Piet.

actually, from the looks of it, this seems to be an ebay pump and dump
scam. Someone is probably bidding real high so that no one else
will bid on it, then at the last second, they will retract that
bid thus leaving the previous bidder the winner (at the lower bid
of course). Happens all the time.....

1038. THE SHOCKING TRUTH ABOUT WACKEY MACKEY

Newsgroup: rec.radio.scanner
Date: 2000-01-08 00:00:00 UTC
From: hitman76@my-deja.com
Message-ID: <856omn$3kj$1@nnrp1.deja.com>
Source record: 97055

THE SHOCKING TRUTH ABOUT WACKEY MACKEY

This is a mostly complete summary about this newsgroup's most infamous stalker and mental defective - John "Toilet Bowl" Mackey

1. John Mackey (AKA J.o.h.n.M.a.c.k.e.y, Mackeral, Smacksey, Toilet Bowl, John Bowl, Looney Tunes, Portland Psycho, KA0SSF, John, John the faggot, John the Innocent, John the Liar, Radio Fan!, Compania is known throughout the scanning community as a certified stalker, nutcase and complete mental defective for the simple reason that he/she does not have the intellectual capacity or IQ level to actualy post on topic messages.

2. Four years ago Mackey was BOOTED out of the FIDONET SCANRADIO echomail conference by Bill Cheek due to offensive and off-topic material that appeared to dribble from Mackey's mouth. As a result of this action, Mackey relentlessly pursued, harrassed and stalked Bill Cheek for this single action since Mackey could not stand rejection and was of course, hoplessly in love with Bill "Butt" Cheek.

3. Mackey endlessly followed Cheek around like a piece of stuck toilet paper which, suprisingly enough, coincides with Mackey's role as a bedpan wiper and toilet cleaner. Mackey launched a Blitzkreig against Cheek when he appeared on the rec.radio.scanner newsgroup and resorted to flaming, throwing insults and use of neurotic CAPITALIZING OF LETTERS to get his/her point accross.

4. Bill Cheek and others battled with this mental basket case (Mackey) for excessively long periods of time, yet Mackey STILL posted OFF TOPIC messages continuosly (SEE the Definitive Posting Histroy of Toilet Boy) and was obsessed in attacking and grilling Bill Cheek.

5. During this time Mackey engaged in some despicable acts such as the rogue cancelling of peoples posts in this forum, abusing his/her account privilges at FOUR ISP'S, using fake ID's, mail headers, identities and to top it off - making fake "support" posts in order to bolster his delusional belief status as a Newsgroup "Cop" !!???

6. Mackey has been known to completely LIE and LIE and LIE about everything he does and says. No one can believe this creature - he/she is a COMPLETE PATHOLOGICAL LIAR OF THE HIGHEST ORDER - he/she is so bad that the MAYO clinic actually REJECTED him/her for treatment.

7. Mackey is also known for buying and selling HAM RADIO licences. Mackey likes to claim that he/she has numerous FCC licences yet when asked to provide evidence of such licences, Mackey clams up and spreads the usual bullshit lies and untruths. The fact is, Mackey wouldn't

known how to operate a toy train, let alone a damn hairdryer.

8. Mackey is also known in Portland, OR as the REPEATER SMOKER - so named because he/she is infamous in that region for blowing out 100% working repeaters. Mackey is able to do this because he/she has no concept of electronics, radio or common sense. All this creature knows is how to stalk, lie and wipe bedpans.

9. Mackey demanded to see proof of Bill Cheek's licences and would only state his/her qualifications if Cheek proved his. Guess what ? Cheek proved his credentials, yet JOHN THE FRIGGIN LIAR Mackey refused to show his/her's!!. Not suprising, since Mackey is a PSYCHOTIC lunatic that can't handle reality.

10. When Bill Cheek was arrested in relation to the sale of MDT data slicers, mackey STILL OONTINUED WITH HIS RELENTLESS attacks on Cheek and even went as far as admitting that he/she was responsible, in some manner, for Cheek's demise. This proves that Mackey is a despicable creature that belongs under a rock.

11. Recently, Mackey stated that he/she was a "Medical Supervisor" but refused to state what the title was and where he/she is registered (Town, City, State). Mackey was continually asked to provide evidence of his/her credentials, yet has failed to produce anything tangible or verifiable!. Once again, John the LIAR comes through again with more incongruity and outright LIES and FALSEHOODS.

12. Mackey is truly a 100% certified looney, basket case and mental fruitcake. Psychotic and electo-shock treatment has not worked for Mackey and many fear that the only solution for Mackey's condition is a full frontal lobotomy or a visit to Dr Jack Kevorkian (in jail).

Hello All,
I have a like new Pro 92 Hand Held Scanner for sale
you know the one that does everything
Motorola
EDACS
LTR
etc...
Has the abllity to scan trunked and conventional at the same time
It works and looks new because it is only 3 months old
I have all the original accys
Plus Leather Case, 6 NEXCELL NiMh Batts, and wall wart charger
I would like $315 for all Shipped in the US
I am selling to pay bills from christmas PLUS the city gave me a
portable
so let me break their equipment not mine :)
For more info,questions or for PICTURES
contact
2nzster@netscape.net
thanks Tiny

>In rec.radio.amateur.equipment, Z. James wrote:

>> Regardless of the long winded thread here. 99.9999999999% of human beings
>> could [NOT] care less of the restructuring.

And an even larger percentage of folks could NOT care less about you
or things you feel are important in your life, yet those things are
still important to you, right? One thing we are assured of is that the
folks participating in this thread do care, so for calculating
our base for your percentage, we should not use "all human beings."

>> Don't worry about your pathetic little
>> world being overloaded with newbies, they aren't interested.

Again, the base for this percentage you want to use isn't "all human
beings," but rather licensed amateur radio operators.

>Exactly, there was a time when being able to communicate all over the
>world using your own shortwave equipment was a fascinating thing, today
>anyone can pull a cell phone out of their pocket and call almost anyone
>anywhere in the world.

If you don't mind using millions of miles of telephone company cables
and billions of dollars of corporate- and government-owned computers.

The attraction to worldwide communications via amateur radio is that
one has very little dependence upon those things cellphone and inter-
net users depend on.

>Most people don't ever know what ham radio is (or
>think it is cb radio) and could not care less.

That's the way it's always been. Most people don't care about coin-
and stamp-collecting, but that fact doesn't diminish those hobbies.

Jeff

Really? Try pulling up alongside someone with a cell phone and shout out your window, "hey I'm talking to Australia on my mobile ham rig, ain't that impressive?" They will really be impressed as they dial a few numbers and talk to someone in Hong Kong with no fading or static. They don't care how it's done, your ham set isn't going to impress them one bit.

A scanner GREATLY increases the thrill of riding Amtrak.You will hear the onboard conductor talking with the rest of the crew. You'll also hear the dispatcher talking to your train with routing instructions, etc. When the train stops or slows down, you'll know why (thanks to your scanner).

Perfidious <perf@inlandcars.com> wrote:
>I'm curious, how does the amateur radio community help police locate these
>folks?

It usually begins with the PD comms officer contacting an ARES or RACES amateur radio unit to request direction-finding assistance, something hams have become well-known experts at. We use direction-finding antennas to get two or more LOP (lines of position); where the lines intersect is the location of the offending transmitter.

>Are they (or you) using, Operating, monitering these freqs?

It's done with DF antennas and receivers; no transmissions need be made.

>Foxhunting on police bands? how does that work?

I just told you.

>get a life... talk to your friends on the bands and quit playing detective...

Wrong response. When asked to help, we gladly assist. Again, hams are recognized experts in RDF work. In the past amateur radio operators have been asked to assist in conducing RDF work to locate lost hikers and downed aircraft. Should we have declined those offers, as you suggest?

>dont make yourself out to be something you're not.

We're not. But when asked to utilize our expertise in communication matters, we'd gladly assist. I assume you wouldn't.

> And assuming you have a business of your own.... try minding it.

Uh oh, does that mean you're bothered by the thought of our ability to determine your location by tracking your radio transmissions? =:o

Yes but the CBers don't, and look what they did to "their"
band. Do we really want ALL of them on the ham bands?

Well, that's what I said: "No commercial equipment available today is able
to
intercept DECT, but with the right amount of time and money, anything is
possible."

meaning, You can't go out and ask for a DECT-capable
scanner/decoder/whatever.

From what I know, there is not so much interest in DECT from the agencys
because of the way it works. A DECT phone is pretty much always conected to
a land line. Land lines are easily monitored through normal channels.

GSM is much more an issue, especially since the introduction of pre-payed
ANONYMOUS subscriptions.

/Marcus

>Where is this law /rule written?

ACA radiocommunication regulations.

47 Unlawful possession of radiocommunications devices
Subject to section 49, a person must not, without reasonable
excuse, have a radiocommunications device in his or her possession for the
purpose of operating the device otherwise than as authorised by:
(a) a spectrum licence; or
(b) an apparatus licence; or
(c) a class licence.
Penalty:
(a) if the radiocommunications device is a radiocommunications
transmitter:
(i) if the offender is an individualï¿½imprisonment for 2ï¿½years; or
(ii) otherwiseï¿½1,500 penalty units; or
(b) if the radiocommunications device is not a radiocommunications
transmitterï¿½20 penalty units.
48 Additional provisions about possession of radiocommunications devices
(1) Without limiting section 47, a person is taken, for the
purposes of that section, to have a radiocommunications device in his or her
possession for the purpose of operation if it is in his or her possession,
otherwise than for the purpose of supply to another person, and can be operated
merely by doing one or more of the following:
(a) connecting the device to an electric power supply by means of
an electric plug or other electrical connection;
(b) connecting a microphone to the device by inserting a microphone
plug into the device;
(c) switching on the device;
(d) switching on any other equipment relevant to the device's
operation;
(e) adjusting settings by manipulating the device's external
switches, dials or other controls;
(f) connecting the device to an antenna.
(2) Subsection (1) only applies in the absence of any evidence to
the contrary.
(3) A reference in this Division to a person having a
radiocommunications device in his or her possession includes a reference to the
person having it under control in any place whatever, whether for the use or
benefit of that person or another person, and although another person has the
actual possession or custody of it.

My Pro2005 is still for sale.

RS PRO2005 with OS456 Lite board.
Only a couple of mods,
a diode is missing,
and the power supply has been removed. I have the power supply and will of course include it should you wish to re-install it. Radio runs much cooler with a wall adapter instead of the internal power supply.
Display is GOOD, not perfect, but with the OS456 Lite board, the display is not "needed."
$325.00 I ship UPS to continental US.

I posted a similar comment on rec shortwave about the crazy prices
people pay for 1970's analog radios, paying MORE than they cost new. All
these years I let stuff go for alot less thatn the kooks on e-bay pay
for this stuff. I saw someone bidding $200 on Amazon auction board for a
BROKEN Grundig 1000 !!!

I believe the question was is it possible to listen, who cares whether
it is legal or not. Who is going to know? The mattress tag or thought
police? The answer is any analog 900 or 46 mhz phone you can hear
plain as if the person is next to you, and its fun! Digital is
possible with software and a lot of knowledge. Spread spectrum 900mhz
or 2.4 Ghz FORGET IT.....at least for now.

Why would the situation be different then? Even on GSM, authorities should
be able to eavesdrop without having to listen to radio traffic. Operators
are required to provide the possibility of a tap (at least here they are).

Anonymous subscriptions are another issue, indeed. Of course the operator
always knows where you are and where you have been, but it is probably
tricky to find the subscription ID of a certain suspect person using that
method, given today's user density.

Probably in the USA. Over here an all-band receiver just includes the
cellphone frequencies, and anybody can listen to them. But the analog FM
system has been quickly phased out and now there is only GSM which is more
difficult to listen to.

Didn't read the page, but if you are not going to wind the wire in tight circles, justa bout any size wire will do. Magnet wire is wire that is copper wire with an enamel coating or something similar to it. That is wire that is coated with thin inslulation that looks like it was spray painted on instead of a thicker plastic or cotton insulation. Motors are usually wound with this type of wire. You have to take a knife blade and scrape it off or you can use some sandpaper to remove it.

Wire is measured in 'guage' . Wire used in the house is mostly 12 or 14 guage with the larger number being smaller in diameter. Number 10 is about .1 inches in diameter. This is the copper diameter and you co not count the insulation in the sizing. Number 20 is a good thin size. Much smaller than that is hard for most to deal with. Every 3 sizes smaller is about 1/2 the diameter. That is 13 is half the size of 10 and 16 is 1/4 the diameter of 10.

Good answer. I've seen some 46 MHz phones with voice inversion.
Then you'll need a voice inversion circuit/device or software
(and computer). I see that the AOR 8200 scanner has a voice
inversion option card. It's probably not sold in the US? I
wonder how well it works.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,alt.radio.scanner,rec.radio.scanner

I have two dual band handhelds for sale.

1 - Icom IC-Q7A with Extended TX mod done. Excellent scanner also, receives from 30 MHz to 1300MHz (less cell) and tx on 130-174 and 400-460 or so. With original box, manual and antenna. Great radio works for days on 2 AA batteries, $175 shipped

1 Heath (private labled Standard C558) HW24T, dual band HH with two antennas, cell and extended RX mod done, dual VFO's, manual, original box, charger and 7.2V batt. Sell for $225 shipped

ALSO; EF johnson VHF handi talkie, w/o antenna connector. Unit will work fine when charged and antenna connector added. With 9.6V 1Ah battery Sell $150

Photos upon request

Hey, this is Usenet baby. Lots of useless crap. Also, this NG
has no "administrator" (moderator). So feel free to write
useless crap. But do us a favour and indicate in the subject
line that it is useless crap so I and others don't read it.

It's all what the market will bear. You ever hear of the prices that antiques and old paintings go for? With the same logic, the Mona Lisa should be worth 50 bucks. Why would anyone want a 400 year old painting that's fading?

It's all what the market will bear. For example, I saw a beat up looking brass fan on Ebay with a bid of $12000! Someone commented on it in the Ebay newsgroup, and someone else (a collector) said they routinely go for that in the "real" auction houses. Me? I thought it was a joke, but apparently not. Another example - coins. Why does a 100 year old silver dollar fetch hundreds of dollars? It's only worth a dollar, right?

When someone wants something, and there's a limited supply, the price rises. That's economics. If you don't see value in an object, it obviously doesn't interest you, so don't buy it.

Just a wee bit curious about something. If the FCC decides in 10 or
15 years to eliminate all testing requirements for a "Ham" license,
would you be in opposition to this policy? If your answer is in the
affirmative, what would be your answer to a new age "ham" who might
berate you for being an old fashioned intellectual elite snob?

The truth about mackey .....

he is nothing
he is a figment of your imagination
he's like that annoying ad that's in the paper everyday
he's that asshole that cut you off on the highway this morning
he is every parents worst nightmare
he's that jerk in the back of the class everyone hates
he's the guy nobody ever picked to be on their team
he's the guy that constantly lies and everyone knows it
he's the guy that we're all going to ignore ...

kill filter on for another semester ....
bye bye mackey

f*ck off and die

One I would be in oppsititon to this sort of policy, but I
conceed some similarities. However the charge that those who suport
the then Old order as intelectuals, come on If such a movement comes
into to being I do hope for their sake they pick a better slur than
that, nobody in anything close to thier right minds is going to call
our testing procedure excessively intelectual. While I did and do
adknowledge some simlairities between the idea of NoCode and No Test,
there are big differences. One we test on rules rules knowledge in
part, something that will always be defendable by the FCC. Two we test
in part for things related to safety issues, this will also be
defendable as in the public interest. Three the current tests (i'll
not say what they are like in ten years) are not so hard as to be
burdensome on people. These three things mean that Code and the
written materail, are always going to treated differently since can
without code knowledge, operate legaly and safely, while assuring
legal and safe operation without any testing is much harder. That said
I am of the school that says , IN AN IDEAL WORLD that WE DO NOT have,
I would favor NoCode No Test, thus I view testing as a neccesary evil,
not as a good thing in it's own right. I do conceed it is possible to
chalenge the testing of anything more than a very minimal level, in a
legal sense, today. that is one CAN argue that much of the materail we
curently test for is not clearly within the power of the FCC. I do not
care to make that case, and I believe it can be beaten but a case can
be made

You can only scan 1 trunked system at a time. I think this is the
problem you are having. Even though you have city a and city b
programed in 1 trunked bank you can only monitor 1 at a time! How do
you chose which one you want to listen to?? Luck of the draw.....which
ever data channel the radio finds first.

I don't how much info you have about railf freqs. but listen between 160.215 and 161.700 and you'll hear the engineer and conductor, ocaisional dipatcher and defect detectors. Try these specific freqs:
161.385,160.695, 160.410, 160.470, 160.515, 160.740, 161.260. These are probably not all accurate, but it will give you a start.

I am not John, but I can tell you that Portland currently has 14 towers operational. There also may (or may not) be a new 21st frequency on the simulcast sites (there are four of them) -- 864.9125.

Uniden.

> If Uniden, any relation to the the new 780xlt?

None that I'm aware.

> Is the 895XLT still the best tabletop unit?

Tough question. Depends on your needs. The BC895XLT paired
with the WinScan software makes a powerful tool (and lets
the 895 do things it was inteded to do on its own). But the
895 can't do EDACS. For EDACS, you need to look into the
BC245XLT or OptoCom or a custom solution using TrunkTrac
or TRUNKER.

Not the case. The 2052 can't do conventional and trunking systems
at the same time! It is also short on features compared to the 245.

Doing a suck feed like that might be considered abusive--a denial of
service attack. No one gives a damn if you have a list of 100 people
and 40 of them are on one domain and you use an open mail server on
that domain to send out the whole list in the name of efficiency but
they DO give a damn if you send out 100,000 spam ads for the latest
and greatest XXX-rated site or pyramid selling scheme through that
same open mail server--you might manage to crash it and it begins
costing money. So numbers matter.

Nick,

I think suggesting people who take pride in acomplishments should
simply forge their acomplishments to save work is a very poor
suggestion.

I can't imagine why that would make anyone feel good about themselves.

>While scalding, that was very well said Nick. I indend to get my license
>someday. This is a very VERY new interest of mine, and I go into this
>interest late in life at the ripe old age of 26. I'm going to be taking

>remarks while scalding, are well said...

Since you think Nick spoke the truth, Does that mean you intend to
forge a license, as Nick suggested?

This all seems very strange to me. No wonder its so difficult to find
skilled help today. I'll have to check closer and see if the
credentials are forged or real. I had no idea this was going on.

London UK's Metropolitan Police have a 13 Cell (site) SmartZone Trunking
system**, so I would have trouble putting each Cell in it's own separate
bank, so I have put Cell frequencies used at opposite sides of the city
in the same banks.. This works well, as if I am in the NW area of the
city, the 245 cannot hear the SE control channel and so auto selects the
NW control channel (as long as I select the correct bank)..
Now on odd occasions the 245 can hear more than 1 control channel and
selects the wrong one, in this case I just Lock Out (L/O) the unwanted
control channel... But remembering to unlock it later..

Anyway, in answer to your question:

Temporarily Lock Out the unwanted control channel(s) in the current
trunked bank..

** Each cell has to treated as a separate system by the 245 (and
Trunker)..

>equipment that picks up cellphones. I didn't think they actually banned
>listening. Of course repeating what you hear is another matter...

Yes. The Electronic Communications Privacy Act made the actual act of
eavesdropping on cellular calls a crime. Before that Act, the Communications
Act of 1934 ruled. It merely forbade disclosing anything you might have heard
on any non-broadcast radio service to a third party (or from profiting in any
other way by any information you obtained by such eavesdropping).

The ECPA covers a wide range of radio services, not just cellular. In short form,
if it isn't intended for the general public to hear, it is a crime for you to attempt to
listen to it unless you are authorized by the sender to do so. The broadcast services
are an obvious exception since they are intended to be heard by the general public.
Amateur radio was also exempted by name, as are the non-encrypted transmissions
of public safety agencies. (The latter was a bone thrown to the police call scanner
enthusiasts. The original draft act banned this too.)

On Sat, 08 Jan 2000 22:50:21 -0800, Bob <wolfbob@csnsys.com> had the
audacity to say:

>Why are those who abound in ignorance the ones who make the most noise.
>Ebay requires a credit card that is validated

Are you sure about that? Do they delay activation of your account
until they have called the credit card company and verified that your
credit card is valid? Or does it accept any number that has correct
check digits?

Even if they check validity of the card, it is quite easy to obtain
valid credit card numbers - a little dumpster diving behind your local
Best Buy, for example. In fact, I could get an account on eBay with
YOUR credit card number and you'd never know (unless I began making
fraudulent purchases or something). Plenty of time to pump up a few
auctions.

>and an email address that is stable

i.e. they will accept anything that is not a hotmail, yahoo, or other
free web-based email account. It's not difficult to get a throwaway
account that eBay will accept - I have done it myself.

>You are tracked by both the CC # and the email add. so if either show up on
>a new user, his account is marked (sun glasses)

The sunglasses show for ANYONE who has changed his account info
recently, which would include ALL new users.

So much for your credibility. Gee, it's starting to sound awfully
noisy in here all of a sudden...

hi name is denny. we live in oxnard,ca. i have fer sale ; uniden 235xlt hand held scanner i got it for my nephew for xmas. he has no interest in scanning. insteed i gave him a pair of frs talkies! he's happy now! so i have one unit i do not need. bought a r.e. 2000 alpha scanner. so, the 235xlt is in very good cond.!
it has all the stuff ; ant. , 2 batt. ni cads. , charg. tray , pwr cube,manuals , and orig. box all papper work. works great and hears great too, i think better then pro-90 r/s. we have no trunking in our area, yet! the price is $150.00 and i will ship free.. ps give me a call (805)488-7622 person to person collect and or have any questions??. or e-mail me: ddubsky@aol.com

thanks and good scanning. happy new year to all.
denny........

Bob,
it's ironic how you are accusing people of being "ignorant" when
it is really you who is ignorant. EBAY requires cc only if
you have a "general" email address, ie, hotmail, yahoo etc.
You can easily setup an anonymous account with an email address
that EBAY doesn't think is "general".
Also, even is you do chose to you a general email address,
you can easily fake the cc #'s with a little research.
Don't put your trust in Ebay, and in general, don't put your
trust in anybody.

>> you live in Portland, OR. How many towers are there in the
>>Portland/Vancouver area.

I am not John, but I can tell you that Portland currently has 14 towers
operational. There also may (or may not) be a new 21st frequency on the
simulcast sites (there are four of them) -- 864.9125.

If this is true, then I just programmed all the City of Portland radios
incorrectly - where is this new 14th site? And what is the *Correct*
frequency list? I'm sure the Portland Police and Fire bureaus (and thousands
of others) would like to have their radios fixed......
Also, none of us remember going to any City sites to add a "21st" frequency"!!!
(or even ordering the equipment!) Must be old age settling in..

>check digits?

Ganesh, you prove Bob's point. You challenge his statement with no knowlege. In fact, eBay processes a $10.00 charge against the credit card at the time of registration, crediting that amount to the member's account for payment of future fees.

>Even if they check validity of the card, it is quite easy to obtain

eBay sends daily e-mail notices to bidders and sellers. They know whether the e-mail account is legit.

No, no, no....I wasn't recommending that a LICENSE be forged. Just put a piece of paper with some bogus writing in a nice frame, hang it on the wall by the expensive rig (I didn't say that he needed to USE the radio), and then the gentleman can have ALL of the satisfaction which he appears to derive from his amateur radio license: A FANCY, OFFICIAL-LOOKING L_A_B_E_L, nothing more. No need to even power-on the rig!

He said it himself, the LABEL has lost its value now that it doesn't set him apart anymore (after restructuring). I'd like him to have a nice, fancy, official-looking label again, so he can feel good about himself again. If he does what I suggest, he can have the nice, fancy, official-looking label back, but without wasting all of that time on the distracting AMATEUR RADIO stuff.

> >While scalding, that was very well said Nick. I indend to get my license

> forge a license, as Nick suggested?

No, it means that he's getting his kicks from RADIO, not from the piece of paper. It means that he can tell the difference between a superficial label (a piece of paper) which says "amateur radio" on it, and being an actual amateur radio enthusiast (unlike the gentleman to whom I was responding).

Paul....CTCSS stands for continuous tone coded squelch system . Probably most of what you listen to on your scanner transmits a subaudible tone (CTCSS) every time you receive its signal. If you know the correct tone for each service, you can program it into your scanner along with the frequency (some frequency guides show tone frequencies as well). When you enable CTCSS on the front panel of the scanner, you will eliminate a couple of things 1. most interference on that frequency and 2. any other users on that frequency (besides the one that you want to monitor) that don't use the same tone.

This is a rough description, hope it helps.

The HT-220 Page has been updated with UHF tuning procedures and more articles in the Tech Tips section.

This website has information including model tables, frequency conversions, parts and accessories, manual numbers, tech tips and stories.

See http://www.batnet.com/mfwright/HT220.html

Back in the 20th century when only women wore earrings and men walked the surface of the Moon, the Motorola HT-220 was the hottest handheld on the market when it was introduced in 1969.

HT-220 is Y2K compliant.

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I never thought the old rig would attract a cult following!"
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

The only way putting two cities in the same bank would work
is if you cannot receive both cities at the same time. This way
when you are in city A the scanner finds the control channel for
city A and when you are in city B the scanner finds control channel
for city B. If you can receive control channels for both cities
the scanner will lock on to whichever city it finds first.

I don't think anyone should be forced to buy, sell, or even visit at eBay if they don't want to. However, if someone does choose to buy or sell at eBay I think thats OK too!

I think you certainly did. You started throwing terms like "old fart"
to describe those who don't agree with your perspective on things.

> Maybe I should have just said "Bigot". Look up the definition, and then
> try to tell me that many of these guys (including you it seems) do not
> fit the definition. And THEN tell me that I'm "arrogant". If the truth
> hurts that much, maybe you should re-evaluate your point of view.

If I don't think the FCC's move was a good one and that simply does not
make me a bigot. It makes me someone with a very different opinion than
yours. Oh...what "truth" are we discussing?

> > > There's a difference between "liking" someone, and tolerating someone.

The world is also full of people who may agree with me.

I see it as you have 2 choices. Accept, tolerate, and
> understand, or stick your head in the sand and be miseable. Which will
> it be?

Hell, Dave--I have many more choices than that. I do understand. I
don't accept. I'm not sticking my head in the sand and I'm certainly
not miserable. See, I don't have to go by your list.

> As to liking me or not, that is your choice as well. I certainly won't

You don't seem to understand how things work. I not obliged to tolerate
you. I can respond to your posts as I'm doing now. As to my opinion
vs. your opinion--I like mine.

I'm beginning to see a pattern here. If my view doesn't coincide with
yours, it's narrow, huh? You've used a bit too many metaphors for me.
As I understand it, you're a messenger for something or other and your
vision is of things swimming, walking and quacking which are not
chickens. This is starting to read like the book of Revelations.

> Whether or not someone "throws in the towel" or not is their own choice.

> over it, move on, or move out. Simple as that.

You're right. Getting out of amateur radio is an individual's own
decision to make. I certainly don't feel that many will take such
drastic action. If your inferiority complex doesn't allow you to
coexist with those who don't share your opinion, don't expect others to
vacate the bands just to salve your feelings. You see, no one is
required to move on or move out.

Anchildas must be some new Mexican dish with anchovies. I don't
question whether anyone will be a real ham. If an individual passes 5
wpm and the written exams, there'll be no doubt that the person is as
real as hams are ever going to get these days. What matters to me is
that person's on-air practice.
> >

> obsolete things. At some point, the rules have to change to track with
> improvements in technology.

Oh, B.S.! CW was and is a viable and popular mode. It is still in wide use on the amateur bands. It doesn't matter a bit whether anyone in commercial services use it. We aren't commercial ops. Anyone whose license permits the use of CW should not have a problem demonstrating some skill in its use.

At some point, we have to acknowlege that
> morse telegraphy is just as old and obsolete as horses and buggies. So
> at what point do we finally stop testing for it?

A good point would be when its use is neglible. We aren't even close to that point yet.

Do we dogmatically
> continue to test for CW into the 24th century when people are Star
> Trekking around the galaxy?

I don't think it'll matter a bit to either of us.

No one is demanding "easier access" to ham
> radio, just access that is more in line with the technology of TODAY.

That is an outright falsehood.

> You can give me the toughest theory exam that is relevant and I'll study
> for and pass it, because that is what is required TODAY.

Me too--and I'll pass a code test to boot.

> I am a man of principles. I just couldn't see the relavance of CW.

...and because the light never dawned for you personally, CW was, in your eyes, irrelevant.

> I refused to allocate slots of my precious time, to learning a skill that

Don't give me no jive about your "precious time". If you found time to study the theory, you could have nailed the code. I'd hate to think

that I wasted eighteen years of something I wanted in order to wait for
a "gimme".

> It's unfortunate that the FCC didn't revamp the theory tests. They are
> way too easy now. I passed all of the current the internet sample tests

Hi,
got a Uniden 245 XLT. I am having a problem with trunking. I have two seperate cities programed into the same bank. (I called Uniden and they said that I could to this.) The problem is that if i put it in normal Trunk scanner mode I can only get City A to scan. If I go through the procuedure for putting the bank into trunking mode, i.e. hold trunk for two seconds, get the beep and choose bank 2, then start a search, I magically get the second city, city B to become active. Then, I can't hear city A any more..

If I turn the scanner off then city A comes back. If I put it in manual mode city A is active, City b is quite. What am I doing wrong?

Thanks.

>some skill in its use.

Why should it not be a problem, clearly an untrue statement
since after all I have a license that permits the use of CW, and yet I
personalyhave no such skill. The claim you are making here has not
been true for at least 9-10 years now. I expect it was not true for
some before that even. That is I firmly belive that even when it was a
requirement for license holders that there were many that could not
domtrate that skill.

As to popularity, it would seem that jamming profanity are
also popular in parts of the ARSm should we all be required to prove
our skill at those to

IYO. in mine and others a much better point is when it ceases
to serve a function whereby the prupose of the ARS is clearly advanced
by making all operators of certain prevelges donstrate that they might
have some skill, which is the current level of testing for Code

OTH it's use is neglible in the scheme of things, which is
where we come to issue of everyone else is doing. Morse Code use is
negilble in the world of Radio alone. It is the third or fourth most
popular mode in the ARS as a whole (behind FM SSB, and the digital
modes combined) It is number two in HAM HF, but a poor thrid to AM
and SSB, in HF as a whole. It remians the number one mode in CW
operattions without regard to the band they are in however.

Indeed here I will conceed that you MAY have the beginings of
a point, alas THE BIGGEST PROBLEM CW advocates have is that they have
been unable to transfer this awaresness to anyone not amoug them. Of
course You still seem blind to the notion that perhaps, just perhaps
we are right and it is irelevant, and that maybe your adherance to it
is merely a quais religous one

>a "gimme".

Sir I for one am turely sorry that you were forced to waste 18
years of your life on anything. I futher assure that were it within my

power I would undo that for you. That you were treated in unjustly was and remains a tragedy for the yourself and the ARS. I and other see no reason however to contiue an injustice simply on the basis of your suffering. That "logic" would have meant that the US should never have freed its black slaves in order to prevent their ancestors lives and suffering from being wasted.

In adittion your assertion that having time to learn the theory is enough to also learn the code is plain false do you turely not know that?

If I remember correctly, you were one of the people making comments
along the lines that people who become "new extras" would not be
considered "real hams", or would be inferior. To me, that is the same as
"crowing"

> > No, I did NOT say that anyone that does not share *MY* personal views is

> to describe those who don't agree with your perspective on things.

Being open minded, tolerant, not being stuck in the past, non
prejudicial and accepting of change is my perspective. If you wish to
align yourself with people that are the opposite, then you are an "old
fart". You may disagree with my perspective, and that is your right, but
I believe that my viewpoint is likely to be more socially responsible.

>

You can disagree with the FCC's decision, that's one thing . But if you
look down your nose at people that have taken advantage of the FCC's
"mistake", then you ARE being a bigot.
> >
> > Bummer! The world is full of people that may not agree with your view of
> > things.
>
> The world is also full of people who may agree with me.

Yes, and I'm sure that the members of the KKK think the same thing.
Because there may be a quantity of people that share your viewpoint,
does not mean that it's necessarily the correct one.

>
> I see it as you have 2 choices. Accept, tolerate, and

By complaining about something, you are displaying your displeasure.
You are obviously bothered enough about this FCC deal to motivate you to
let your displeasure be known, even though it will not change anything.
Maybe you're not miserable, but you're far from happy.

>
> > As to liking me or not, that is your choice as well. I certainly won't

> vs. your opinion--I like mine.

But you ARE tolerating me. By responding to this message, and continuing
this discourse, you are tolerating me to some small degree. If I can't
tolerate someone, I have to remove them from my presence, otherwise they
will cause me to get angry. I want nothing to do with an intolerable
person. I won't converse, or even allow myself to hear someone I can't
tolerate. I doubt if I make you *that* angry. I should not be that
important. Only people that matter should provoke strong emotions.

The pattern is that if you have nothing to say, that could deny the
statement, rip it apart for style.
The point is still valid that if "old time" hams cop an attitude with
newcomers, simply because of the new requirements, they are displaying
prejudice. If you fit into that group, then you are as well. If not,
then this doesn't apply to you.

>
> > Whether or not someone "throws in the towel" or not is their own choice.

> required to move on or move out.

I have no such inferiority complex. If someone cops an attitude with me,
they'd better be prepared for what comes back. And I'm not the one that
"expects" anyone to vacate the bands. I'm just repeating some of the
comments that I've heard. I can remember the "old farts" that I heard on
the air, belly-aching back when they started novice enhancement. They
couldn't STAND the fact that novices were getting phone privileges on 10
meters, 220 and 1296. Many of them stated that they were going to sell
any equipment that they had for those bands. They didn't want to
associate with novices. They felt that they were somehow "better" than a
novice. These same people pitched a bitch when the no-code was passed.
THESE are they types of people that I HOPE throw in the towel. I'm
sorry, but no one needs to be subjected to THAT kind of attitude. Ham
radio does not need people that discourage newbees. Ham radio needs more
elmers. I can't make these people leave, but I can HOPE that they get so
disgusted, that they leave on their own. *MY* feelings are not the
issue. Like I said, someone like that will get a verbal dressing down
from me if they cop that attitude. I'm just concerned about newcomers
becoming discouraged and leaving the hobby with the impression that
ALL hams are like that. I want to go on record as saying that I
welcome any newcomer, and will help them out as much as I can.

>

And there it is. That little prejudice. You believe, deep down inside,
that lack of CW proficiency automatically makes this guy a "lid". You've
already formed an opinion before you even get to know them. THAT was
what I was talking about.

You'd just better be careful that this guy doesn't think that YOU'RE the
lid, for wasting time learning an obsolete telegraphy skill rather than
becoming proficient in modern digital communications techniques.

>

> practice.

That's fine. But if you look up the guy's call first, and discover that
he's a "new general/extra", and then expect him to be a lid, you're not
being fair.

> > >
> > > > >

As far as the subject of whether someone is a "REAL" ham or not, you
opinion IS irrelevant, since the FCC (the only voice that matters) says
that they are.

> > > Dave, I've passed all the written exams and a 20 wpm code exam.

> play the game of political correctness.

No problem, make your feelings known. But it's still a done deal, and
nothing you can say will change that. So any "venting" that you do is
nothing more than "sour grapes". So what remains is how you are going to
deal with the new people. Will you give them the shaft, and tell them
how "inferior" you think they are, or will you give them the benefit of
the doubt and help them in?

The only reason that CW is used at all is because we dogmatically
insisted on requiring it. If the commercial sector has abandoned it,

wouldn't you think that they had a good reason for it? I predict that
now that 5 WPM is the limit, that CW usage will drop off dramatically.
And THAT is what scares the "CW forever types" the most. Less usage
means that eventually the FCC will reduce band space for it.

Study? Who studied? I could pass the theory tests, drunk off my ass,
after 36 hours of no sleep. I live and work with this stuff. Code, was

not something that I needed, wanted, or had time for. I wasn't about to take time away from my many projects to learn a skill that I never intended to use. It makes no sense to do so.

Basic VHF, yes. But in order to get world-wide coverage (like the internet offers), you have to set up a more elaborate ham station. You also have to be cognizant of DX conditions, and the availability of DX stations. It's very much hit and miss.

Sorry, but that isn't true.

The military recently bought a lot of morse code tutors from a
manufacturer, and at the present time I'm working on a PA especially
to boost the output of a back-pack digital transmitter so the
operators can switch to CW!

Yep, CW is right in the specs.

Now that doesn't mean we should be required to learn morse code in
case we have a little war, but it does prove the people who use
arguments like those above often state what they "think" is going on.
Of course that isn't necessarily what is really going on.

CW is a very reliable mode for exchanging information when other modes
won't make it through, and doesn't require a lot of supporting
hardware.

Like doing math with a pencil and paper, it will always have a place.
Especially if the amount of power and equipment available is very
limited, and communications is important.

The only problem I have with the amateur exams, and how the exams have
been changing, is how they are m,ore and more becoming a test of
memory and not actual knowledge.

The people who "just can't get the time or skill" and are waiting for
a free ticket have a right to enjoy the dumbing down (thanks partially
to Kenwood, who should have been excluded from input into amateur

affairs because they have a profit motivation).

But they should just keep one thing in mind.... many eight year olds (and younger) can obtain the highest class ticket under the present "testing".

The problem with amateur radio slacking off isn't the testing, it is a social change. We could give the tickets away like the ones received by filling in the forms that came in a CB radio box in the 60's, and we still won't get a bunch of new hams.

The only thing any of this will do is let the people who are too lazy to study upgrade. A lot of people will move up in class, but you can bet there won't be any great increase in numbers after a little initial surge.

This is a free pass to an Extra or General, and has nothing to do with fixing the social problem of people not being interested in how things work, working, or radio communications.

If anyone thinks this is a plus for all of us, they probably should think again.

No. It would be equivalent of requiring voters (here in the US) of being
able to communicate in English.

I Often set up my computer to do this...

I have software that you point at a domain, and it sits there and just
sucks everything that it can find, recursivly following links.

You can even set it up to follow links to other domains... although I
filled up a 12 gig hard-drive in a day or so doing that.

I didn't understand him to say he was proud of the paper and ink, I
understood him to say he was proud of his efforts.

I'm not sure what the politically correct view of people who take
pride in acheiving goals through work is today. It may have changed to
the point where being proud of accomplishments is consider a flaw.

My opinion is probably out of date, at least according to the Ted
Kennedy school of water rescue standards. But I think he has every
right to place value on what he has earned.

IMO, suggesting someone forge credentials to be "proud" is shameful.

Usually the call sign of an aircraft reflects either the type, or the company who owns it...

I.E., a small Piper Cherokee would use the call sign "Cherokee 8-1-niner, Juliet-Sera" 819JS is the tail number of the aircraft... A US Airways Jet would use "US Air 832" where 832 is the flight number.

>
> That isn't even my amateur radio callsign!!!!!!!!!

Yes it is demented one - Your other "fake" licenses don't count ya
friggin basket case.

> > 2. Four years ago Mackey was BOOTED out of the FIDONET SCANRADIO
> > echomail conference by Bill Cheek
>
> The above is true!

Selective quoting again deranged one ?. Cheek ousted you from
SCANRADIO because you REFUSED to comply with the moderator's guidelines
and basically wouldn't keep ya friggin pea brain bullshit dribble out
of the echo.

> > As a result of
> > this action, Mackey relentlessly pursued, harrassed and stalked Bill
> > Cheek for this single action since Mackey could not stand rejection
and
>
> The above is a bold faced lie!

More falsehoods ya pathalogical LIAR!! - You know DAMN WELL that you
continually stalked and chatised Cheek endlessly wherever he went. You
were totally incapable of standing REJECTION from the enlightened
Scanner GURU himself. Your IQ level and scanning knowledge is absolute
ZERO compared to Cheek's yet you hounded Cheek persistently just to
make ya pathetic drivel and psychotic ramblings known to the world at
large. You really are a basketcase and a complete disgrace to the
human race, Mackey.

> > 3. Mackey endlessly followed Cheek around like a piece
>
> Again, another lie.

It's true ya friggin brain dead PARG Thug

> > 4. Bill Cheek and others battled with
>

> The person you mention (immediately above) battled until he had his internet
> access revoked for abuse.

No Toilet face, Cheek had his account revoked for entirely unrelated matters which are totally beyond your pea brain's comprehension oh mentally challenged one.

> > 5. During this time Mackey engaged in some despicable acts such as the
> > rogue cancelling of peoples posts in this forum, abusing his/her
> > account privilges at FOUR ISP'S, using fake ID's, mail headers,
> > identities and to top it off - making fake "support" posts in order to
>
> Another LIE!! I NEVER did those things at all!

Bullshit Toilet pan - this is the biggest LIE you have ever made!. You continually made ROGUE cancel's of peoples POSTS in this newsgroup and in addition, you made anonymous postings to an OPEN NNTP SERVER at CLARK COLLEGE and numerous other host systems in order to spread and bolster your pathetic looney ramblings about Cheek.

> > 6. Mackey has been known to completely LIE and LIE and LIE about
>
> I have NEVER told a lie in my entire adult life!

BWAHAHAHAHAHAHAHA

This is the biggest joke of the Millennium! - Mackey denies saying any lies ??. Toilet brush, you are NOT even an adult, let alone a human being and your mental condition is such that you are incapable of saying anything other than 100% baldfaced LIES. Every syllable you have SPEWED in this newsgroup, all the 3000 OFF TOPIC POSTS in the last 4 YEARS, have PROVED that you are a PATHALOGICAL LIAR and a MENTAL defective of the highest order.

> > 7. Mackey is also known for buying and selling HAM RADIO licences.
>
> Another lie above!!! As indicated by my recent recruitment into the
> "Information & Compliance Bureau" of the FCC as an "Official Observer".

More bullshit ya friggin reject. No such FCC division even exists ya terminal fruitcake. More evidence to support the FACT that you are DELUSIONAL and incapable of congruity in any shape or form. You are truly beyond hope.

> > Mackey likes to claim that he/she has numerous FCC licences yet when
> > asked to provide evidence of such licences, Mackey clams up and spreads
> > the usual bullshit lies and untruths.
>

> ANOTHER LIE! I have posted the license numbers of my FCC licenses
many
> times!
> (They are a matter of public record)

FAKE LICENSES ya friggin fraudster and crook!!. How much did ya pay yer mental PARG thugs to obtain those BOGUS licenses. Pray tell, oh truthful one.

> > 8. Mackey is also known in Portland, OR as the REPEATER SMOKER - so
>
> On the contrary, I build & maintain repeaters.

You BLOW UP AND DESTROY Repeaters delusional one! the evidence is all around Portland, OR for all to see. You are famous in that region for trashing and destroying beyond repair, fully functional Amateur and commercial repeaters.

> > 9. Mackey demanded to see proof of Bill Cheek's licences and would
only
> > state his/her qualifications if Cheek proved his. Guess what ?
Cheek
> > proved his credentials,
>
> WRONG!!! He has NEVER provided ANY proof of LICENSES or
> QUALIFICATIONS as this NG has asked.

Wrong Wackey - Cheek HAS shown his credentials but not to cretins and lower scum lifeform like you.

> > 11. Recently, Mackey stated that he/she was a "Medical Supervisor"
but
>
> I have NEVER stated I was a "Medical Supervisor".

My apologies - that should be "Toilet Bowl and Burnt Repeater Supervisor"

our local and county police(belmont county ohio) recently went to a 911 type radio system(800)...the only thing ican find put is that it may be digital.....as of now no one has been able to find out anything about what type of system this is and according th the local radio shack no radios are manufactured for the public...im looking for any info available...help...i have been scanning for 25 years and have now been shut out ...thanks in avance...gary

1179. Mobile Antenna Question

Newsgroup: rec.radio.scanner
Date: 2000-01-10 00:00:00 UTC
From: rufus279 <c279m@yahoo.com>
Message-ID: <Ztce4.142$wF2.12179@server1.news.adelphia.net>
Source record: 96767

I just recently got a small scanner that I'm goign to install in my car for basic use to monitor the feqs. for the volunteer fire company that I belong too. Rather then install a seperate antenna on the car (I have 1 already for a CB) I was wondering what people think about the spilters that they sell that will allow you to use your AM/FM antenna. The adapter in question is suppose to split the 2 units and isolate each one. Now I know that a AM/FM antenna is not optimized for a scanner put most of the traffic I will be listening to is local units within a few miles.

Thanks

I am buying old RCA 18" Satellite DIRECT TV systems that you no longer use. I will purchase access cards by themselves, receivers with access cards or complete systems. Please email me with the receiver brand or model and which type of access card it has. If you are unsure, let me know the number below the bar code on back. It should start with "H", "HU" or "F". I'll be able to determine what type it is from this information and can make you a prompt offer.

Thanks,

A what to work on on?

I've worked on many HT220s, couldn't be easier to work on, clean straight forward circuits, exceptional performance. These old crystal controlled radios make a mockery of "modern" synthesized radios. A HT220 with its 45 to 50 db signal to noise ratio really sounds good compare to todays synthesized radios with maybe 30 db S/N ratio.

Oh well, the price for progress..

>

Oooooohhh, Logic! I love it!

Yes, if the FCC decided to abolish ALL testing, I would very much be against it, as I feel that in order to be given the responsibility of running a high powered ham radio station, that you should be able to demonstrate that you know what you are doing. I believe that the testing should be periodically updated to reflect advances in new technology, as well as remove obsolete technology, and of course, FCC rules and regs. Right now, as I see it, Morse code is obsolete technology. Sure it is still usable to those who have an interest, but it is not necessary to know to operate a ham station.

Just as I would think it nostalgic and neat to build a simple AM tube transmitter 40 years from now, and use it to "relive the old days", the technology to make it, should not be required to know, for testing purposes, if all the common modes have become digital. It becomes optional, just like CW should be. If you want to use it, use it, but it shouldn't be required.

Dave

You bring up a very good point, and one that I agree with. I have never
been a fan of the VE system, as I know that the temptation by the
average citizen to abuse the system is just too great to allow them to
be trusted with the responsibility. I personally know VE's that have
"slid" people by with both theory and code tests (In fact, I was offered
a code "test" by one group, which I politely declined). I know of other
groups that do it for money ($200 for general, $300 for extra).

Back when the FCC administered tests, you had to deal with the
inconvienience. You had to go on THEIR schedule, you had to wait to
retest, and it was very difficult to "cheat" the system. Only the truly
dedicated would put up with this, in order to get their tickets. Maybe
if the license fee were re-instated and set at a level of something like
$50, the FCC would not be so quick to get out of the administrative
department, and the "quality" of the ham would be much better as a
result.

But in today's air of "instant gratification", many people are too
impatient to go through this exercise.

Is ham readio dead? No, but it is losing its uniqueness, and sterling
quality.

Yes, but look at the other side, with the testing requirments as they
now stand, a person with substantially LESS technical knowledge, skill
and discipline can obtain a high level ham license, with little actual
work. So the "value" of the license has been degraded, since it is no
longer necessary to be a "tech whiz" to get one.

> But it seems that this isn't enough for you. You crave that piece of paper
> which says "Advanced" or "Extra" on it, not because of what YOU are and
> what YOU have accomplished, but rather because of the mark the LICENSE
> PUTS ON YOU, because of the "specialness" it confers on you, because of
> the "distinction" which you believe it will afford you.

It's no different than the bogus network "certification", that
Mickey-soft and Novell started for computer professionals. It's a piece
of paper, that says that you know something. The difference is that MS
and Novell are making big bucks off of everyone that studies and takes
the test. But it's only worth something if you recognize the validity of
the testing methodology.

Once upon a time, a ham license looked good of a job application or
resume. Participation in what was then "the" technical hobby, was a
testimony that the job applicant knew enough to pass the tests, which
meant something to a manager looking to hire technicians or engineers.

Today, that is no longer true, except for some specialized
communications fields.
>
> If that's all you want, just have a fancy, official-looking embossed piece
> of paper framed and put on the wall next to your $3000 general-coverage
> receiver. Only a tiny handful of people will know the difference.....
>

Maybe we just want to make sure that everyone who plies the ham
frequencies has enough technical knowlege to keep them out of trouble,
and enough responsibility and maturity, that they won't cause trouble.

And it is still true that the value something has, to its owner, is
directly proportional to how much effort one had to expend to get it. If
you had to apply yourself for the better part of 3 or 4 months preparing
for, and passing the test for a ham license, you will be less likely to
abuse the privilege, than someone who just signed on the dotted line.
That's human nature.

Dave

So this is what I have to look forward to, huh? I'm sorry, but I resent the hell out of your sentiment that every new ham is an "idiot" or a "CBer". I am studying for my Technician's license (ready to take the test at the next hamfest) and look forward to advancing in the amateur radio service, despite the less than gracious welcome mat that you folks have laid out. The focus of Amateur Radio is helping people through the understanding and application of radio communications theory. From what I've seen, other than relaxing the CW requirements somewhat, the FCC hasn't lowered the entrance requirements to the point that it doesn't require hard work to attain the various level licenses.

I'm not meaning to single you two gentlemen out, I've been reading similar posts for awhile now and decided it was time to speak up. There are some of us who are just getting started in amateur radio that could use help and encouragement from the more established hams. I understand your anger, but you should be careful not to do more harm than good by callously tossing out such comments. Dig out your ARRL Handbook and read the Amateur's Code, based on this and similar recent threads we seem to have lost sight of something important.

Respectfully,
Mike

But the 9 that aren't dead might feel differently.

This also needs to be put into perspective with respect to other risks.
For example, the Lancet reports that there were approximately 700,000
needless deaths in the US in 1997 due to medical bungling. That's about
20 times higher than the rate of violent crime caused deaths. In other
words, it is probably safer to walk the streets of urban areas at night
than it is to check into an urban hospital.

> Wrong. The changes to the ECPA in 1994 made it illegal to manufacture or
> sell a radio that was capable of receiving, or being 'easily modified' to
> receive, cellphone bands.

Actually, there is federal law, TDDRA did not modify the ECPA, it was in 1992, and it is not illegal to _sell_ a cell-capable scanner. The following is a re-post of a short disertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

<<Elaborate on your receiver & monitoring target(s).>>

the receiver is a BC 895XLT and sometimes a BC245XLT, monitoring trunked radio systems where the base and mobiles are mostly geographically limited to a small area and in discrete directions (systems are in Las Vegas, and include one centered on Downtown and another on the airport, within 15 miles). Some units in these systems are, however, county wide (fire and police). As it is, I'm already located somewhat above the transmitters.

Thanks in advance for any help.

To this I must say that the Cellular Industry has done this to us, i.e., made law-abiding citizens criminals for carring on with an, otherwise, legal hobby. They have Congress in their pockets. Even an idiot half-way versed on what the current condition was and given the fact that these laws do not stop anyone from listening would have told the cellular industry to encrypt their equipment. But again, we are talking about the Congress. I'm sure that this was debated to its death in the past on this group.

Can you imagine working at the following Company? It has a little over 500 employees with the following statistics:

*29 have been accused of spousal abuse
*7 have been arrested for fraud
*19 have been accused of writing bad checks
*117 have bankrupted at least two businesses
*3 have been arrested for assault
*71 cannot get a credit card due to bad credit
*14 have been arrested on drug-related charges
*8 have been arrested for shoplifting
*21 are current defendants in lawsuits
*In 1998 alone, 84 were stopped for drunk driving

Can you guess which organization this is? Give up? Check below!

It's the 535 members of your United States Congress. The same group that perpetually cranks out hundreds upon hundreds of new laws designed to keep the rest of us in line.

Food for thought, eh?!

> In short:
> It is illegal to manufacture or import cellular-capable scanners.

As a licensed Radio Amateur for over 36 years, and a long time member
of the ARRL, I offer the following opinion regarding the forthcoming
license restructuring;
Although I am 110% in favor of the CW requirement, I recognize that
it, in itself, is not a measure of a good Amateur Radio operator.
But, there seems to have been an unfortunate trend in the ease by
which a license is obtained. Reducing the CW requirement is another
step in permitting less effort for more privelege. Furthermore, there
is little doubt that the VE examination system is of questionable
integrity. Friends are cut breaks, to outright corruption. Sure,
there are some honorable VE's, perhaps most are. But anyone looking
to obtain a license can get one as easy as getting a parking ticket,
if he just know the right people. To argue this is simply denial of
the facts.
The emphasis seems to be "swell the ranks", not improve the ranks.
Make it easier so we have more, don't care about quality, just
quantity. Sell more radios, perhaps? No doubt, the Big 3
manufacturers are happy with this philosophy.
Anything you get for nothing has no value. Think about it and you
will know this is true. Anything requiring effort and truly earned,
will be honored, respected, and nurtured. Why do we implement policy
that will degrade the value of a license? Why not, just once, make it
something difficult, something earned, something valueable?
I no longer believe that the ARRL is promoting this hobby in a manner
which will cause me to be proud to be a Ham. I do believe, that in a
very short period of time, Ham Radio will become a vast wasteland,
where no one with any intelligence will wish to associate.

I do not think that many really understand how much the
ham community does for their local law enforcement.

Our local hams provided ATV (television) links so that the
State Police could monitor the activities of demonstrators
at a local KKK rally.

It should work great for that purpose, and I think you'll be surprised
at how well it works for general scanner monitoring applications as
well.

Depending on what FM broadcasters you normally listen to, you might
notice a slight signal degradation on your stereo receiver.

Hello,

I originally purchased the equipment below for an amateur radio project, but I lost interest in pursuing the project. If anyone else would like to try their hand, or whatever, please be my guest. Phones are in good working condition far as I can tell. Would like to sell everything as a package. Serious offers considered.
TERMS: Prepayment by postal money order, prices include UPS ground shipping or USPS Insured where applicable. I will also consider trades for Motorola Star-Tac accessories such as a Motorola Star-Tac Desktop Charger(s), high capacity Lithium-Ion batteries (black), etc.

(1) DiamondTel Mesa 90X, in very good condition, with tabletop phone/spare battery charger, two standard NiMh batteries, car adapter, and instruction manual ..... $ 40.00

(1) Motorola "Flip Fone", lt. gray. This phone is in good condition with standard battery and tabletop phone/spare battery charger ..... $ 25.00

I also have the following accessories:

(2) used antennas, one "back of the set" antenna and a "window" portable, both rubber ducks ..... $ 5.00

(1) used battery eliminator for the DiamondTel 90X ..... $ 5.00

(1) Brand New in the package battery eliminator for the DiamondTel Mesa 90X ..... $ 10.00

(1) Brand New in the package 6V NiMh Lt. Gray battery for Motorola "Flip Fones", Micro-Tac, etc. ..... $ 10.00

(5) Brand New in the package 6V NiMh Black batteries for Motorola "Flip Fones", Micro-Tac, Flare, Elite, etc. .....(EACH)$ 10.00

(3) Brand New in the package NiMh batteries for DiamondTel (EACH)$ 10.00

If interested, please e-mail directly n3fvg@worldlynx.net Thank You

Mike, take a chill pill. Hams are NOT a progressive, techno-weenie bunch... but don't pay any attention to me, I'm just a new kid licensed at age 16 in 1963 and always amazed at how few other hams ever built or repaired any of their own gear. Hams, as with other humanoids, resent change in any form.When the Novice license was first introduced, even with only a 1-year non renewable license term, it caused howls of protest from many existing hams. In my time, I have seen the Conditional license come and go, the Tech license changed to limited HF (10-meter SSB and Novice HF CW) privileges, Novices extended to 220 phone and 10 Meter SSB and renewable licenses, with similar howls of protest and ads "Selling OUT, Novices and Techs BAH HUMBUG", etc. In reality the dreaded CB'ers have provided more skilled and reliable operators, during the CB heyday of the 1970's, than probably any other source of ham operators. Without them ham radio would have dwindled much more quickly than otherwise. Without the recent (10 or so years ago) influx of new Codeless Tech hams, we olde farts would have almost nobody left to talk to on the radio, storebought or otherwise, by now.
I've read the FCC enforcement lists in QST since first licensed, and the great majority of raging interference, license revocations for profanity, jamming, and other undesirable behavior, come not from new hams but from Advanced and Extra Class licensees. I'm over 50 now and still feel like a kid when attending hamfests and club meetings full of white haired, wheelchair bound, aged hams. My hair is getting ever whiter, and I hope that you go ahead with your interest in ham radio, and that others like you get into ham radio in spite of some of the weirdos you'll run into. All hobbies have loud weirdos, so don't worry too much about ours.
Jim W5AOX

Nice monologue, but you might as well be reciting it to a houseplant,
or sending it via CW to a no-code! :)

You missed the boat. You're too late. Life has passed you by. The
decision has been made, and your letter is in vain. Move on.

And no, I don't care if code is, or is not.

Stop whining about what you _think_ will happen. Most often, it does
not. The ARS needs to concentrate on what it _has_, not what the
individual is pouting for. It like, "Oh, God, I see a change;
therefore, the world is ending." or "Everybody think like me, and join
me in my paranoia."

Grow up, be constructive, OR be part of _The Problem_. It's _your_
choice.

Perfidious:

Ham radio is a hobby regulated by the United States Govt., with the Federal Communications Commission as the enforcing agency. Because of that, the amateur radio hobby is bound to the Code of Federal Regulations, CFR Part 97, Title 47. Within that code is the "Basis & Principle" of amateur radio, which would be akin to a corporation's "Statement of Purpose."

Included in our "Basis & Principle" is the following:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

We are often called upon by our local emergency services to provide help with searching for a missing child, help with public safety issues as they relate to parades and other community service events, help with search & rescue, as well as many other public/community service events. Perhaps you are familiar with the service of REACT in the old CB days. An organization named RACES is also active in ham radio and is governed by guidelines set forth from FEMA.

All of the above is provided by ham radio operators without regard to monetary reimbursement, or ANY form of reimbursement in any way. I think you can recognize the value amateur radio, along with CB radio and REACT, provides to our communities in times of need.

I have been directly involved with public service groups, even organizing public service groups here in my area. I will never forget one story relayed to me by a ham who is a member of SATERN (Salvation Army hams) from during the Oklahoma City Federal Building bombing. A cellular phone company there immediately made 100 cellular phones available to emergency officials working that disaster scene. Almost as quickly as they were handed out, the cellular phone company pleaded for everyone to stop using them--the heavy use had shut down there systems. Ham radio operators provided the backbone of emergency communications in that disaster.

I don't want you to think that I have been preaching to you. It is not my intention that you think that; it is only my thought that perhaps you

weren't aware of why we do what we do.

Right on!
I once had a lot of respect for the hobbt and the amateurs who had
attained amateur extra,no more,for two reasons.
1.I got my own extra in 7 months with no prior code or electronic
knowledge and only a high school ed.IT'S ALREADY TOO EASY!

2.This further dumbing down is just more of the same,politicaly correct
radio,t-ball of the airwaves,nobody loses no matter how little effort
they put in.

At least now my dog can get a license.

Responding to K2TL:
The time for disagreement with restructuring, reduction of CW speed requirements, etc was when the matter was being considered by the FCC, last year. That time is gone now, and it's time for all of us to pull together to make restructuring work for everyone. Sure there's problems in the VEC system, we need to work on that, integrity is essential to maintaining respect, but for every rotten apple there's a hundred good ones, not the other way around. If we know of specific problems, we need to get that information to the proper authorities so action can be taken. Then we need to let them do their jobs.
Instead of tearing the system down and being devisive, we should all now be looking for ways to support the system and make it work. We all had our chance to voice dissent...no doubt you expressed yours as I did mine....but no decision the FCC could have made would have made everyone happy. The decision has now been made, and we should accept it like responsible citizens and get back to work.
No offense, K2TL, but your protest message and dire predictions can only do harm now, and divide us further. This issue has done some damage already to the ham brother/sisterhood in this country, and your help is needed, along with every serious ham, to heal that rift.
"Ham Radio doomed"...??? Only if you and I let it happen, my friend. In each of several instances over the years when there were major changes made, some well-intentioned hams predicted the demise of Ham Radio.... but...it hasn't happened yet. Somehow I think we'll all muddle through this one too. 73, K1MER

I am using a mobile magnet mount scanner ant. (3 sections with 2 loaded coils) from Radio Shack (please don't flame me...) mounted (10' up) just outside of my apartment with 40' RG-6/u (works great considering). The ant. rod is 1/8" thick, if I were to convert the 3 rods to 1/4" or 3/8" thick would my range or quality of signals improve enough to go through the trouble..? Thanx in advance...

I have a real nice car. It drives like a dream. It's good on gas. It's
really nice-looking, too. I worked hard to get it. It cost me a lot of
hard-earned money. But yesterday my neighbor was given a car just like
mine. So now I guess I have to hate my car. It no longer has any value
to me, because if my friend can get one for "free", and go out and
drive the roads same as me, well that's just not fair. He shouldn't be
allowed to have that car unless he worked just as hard for it as I did
for mine. With him driving the roads, all the fun of it is gone for me.
My car just looks ugly to me now. So long car, guess I'll just walk.

No offense, K2TL, but your reasoning is lost on me. How about taking a
little more positive view? With your years of experience, you can make
a big difference in the way things turn out. You can be a force for
helping the upcoming youngsters be better hams, learn how to do things
the right way, you can be an example and a teacher. You and I have both
been in this game 35+ years...we used to call them "elmers", didn't we?
We don't have to let Ham Radio slip away, let's do something positive.
Let's start by talking positive, not negative. Let's work with the hand
we've been dealt, like we have for all these years, and make it work.

K1MER

1229. Re: dedicated 850MHz antenna

Newsgroup: rec.radio.scanner
Date: 2000-01-10 00:00:00 UTC
From: "S.J.Shestokes" <stans@ntsource.com>
Message-ID: <q2ue4.615$lz.3029@newsfeed.slurp.net>
Source record: 96817

I have tested antennas on 800 mhz extensively. The scanners are a Bearcat 895xlt and a Pro-92. The Bearcat has a S meter which was invaluable for testing and for also finding "sweet spots".

I have tested the following:

Mag Mount cell antenna from Radio Shack. - $24.95
Max system 800 available from Grove - $30 for Handheld model - $35 for base radio model
Diamond RH77CA - $30
Austin Condor High Performance Flex antenna - $30
Stock rubber ducky - free with radio
Stock 895xlt whip - free with radio

Here after much testing is my ratings:

1.Max system - easily outperforms the others by a big margin usually. Works on 800 mhz only, no good on other bands.

2.RS mag mount cell ant - almost but not quite as good as the Max. Advantage is that you can move it around to find sweet spot. Works best with some metal under it. I use a coffee can. Works well on other bands too, in fact I found it to outperform Radio Shack's all band mag mount scanner antenna. If I could only have one scanner antenna, this would be it.

3. Austin Condor. The best all around performing antenna, but not near as good as the Max and RS on 800 mhz.

4. Diamond RH77CA. Thinner and nicer looking than the Condor but doesnt perform as well.

5. 895 xlt whip will work "ok" on 800 mhz if you collapse it all the way.

6. Stock ducky. Ugh.....

1230. RG-59 or RG-6 for a mobile antenna?

Newsgroup: rec.radio.scanner
Date: 2000-01-10 00:00:00 UTC
From: paul and jacki <jacki2@gwis.com>
Message-ID: <387A7D3A.4DD9@gwis.com>
Source record: 96818

I am making my own mobile antenna. Is there much of a difference in what
I will pick up using RG-6 (satelite cable) instead of RG-59 cable. The
run will be approx 17 feet long. I do like to listen to weak
transmitters so every little bit helps.
Many thanks in advance,
Paul

Your short time is here.

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

OK, the obvious answer is that if what you're using now works well, keep
using it!

With a specific, relatively close target it doesn't seem like you need
to put something up on the roof, though antenna height usually increases
line of site & coverage range, though extensive coax feed runs will
reduce that.

Focussing on the BC-245, if for some reason you want to try to
improve the system by replacing the current antenna you're using (I also
have one, and it's a great, broad-band antenna for portable use), I'd
suggest going with an antenna tuned specifically for the 800Mhz band.
You could order one from Centurion (
http://www.centurion.com/antennas.htm). It should improve reception
over your existing handheld antenna, though I don't know that it'd
improve it by enough dB for you to really notice.

You didn't take away anything, but the FCC sure did!

It's typical for those who dislike working for something and who
expect handouts to not understand why some people have pride in what
they accomplished.

With that in mind, I understand why you agree with the suggestion
people just forge documents that are symbols of what they accomplished
in life.

But I think picking on a guy who is proud he worked for something is a
sign of just how bad our society is getting. Socialism at it's finest!

For the LAPD and lots of other US police departments point your web
browser to www.apbnews.com Chose the police scanner link and you can
listen to many major US city police calls over the internet. The
signals in that frequency range are *usually* line of sight, ~about
30-40 miles or so.

>and some of American broadcasting radio

You might ? get lucky there at night.

>or Airband frequency even across
>pacific ocean.

Airband again is mainly line of sight, and I don't know of any net
rebroadcasts like those of the police departments mentioned above.

Best thing you can do with this ant is to increase the ground plane surface area, i.e. mount it on a nice piece of square steel so it works as if it were on a vehicle's body. Best increase in range is to get it UP HIGH. Larger diameter elements would make it broader-banded, and its a pretty broad antenna for its size and type as is.

Don't use either one. Both are 75 ohm cables. Use a 50 ohm cable like
RG-58 for short runs.

Paul, if you want the best in a diameter about the size of RG58, go with
Times Microwave's LMR200. It's got much lower loss and better specs all
around. Check out their website for more info.

So what? Are you interested in collecting licenses, or are you interested in radio? If you're interested in radio, then your license is just as valuable as your radio skills, no more and no less. If you're interested in licenses, then, I dunno, take-up fishing. You can get a license from every state!

Here's my angle: I am looking at the person, not the paper. I guess that I'm too old-fashioned, eh?

> And it is still true that the value something has, to its owner, is
> directly proportional to how much effort one had to expend to get it.

Congratulations! You have identified the problem: The man is obsessing on "getting it". Getting what? A piece of PAPER. Forget the piece of paper. What matters is the knowledge, the experience, the fun. Paper is made from dead wood.

Source record: 96840

Use the RG-6 over the RG-59. At this length it probably doesn't matter but the RG-^ is much lower loss and superior to the 59.

DON'T listen to folks that tell you the 50 is a better match. These people have never watched an antenna on an analyzer as it is tuned through a range of frequencies. Rarely will the impedance at antenna end or the receiver ever show 50 ohms except at a few individual frequencies. It makes no difference for receiving. Channel master supplies RG-6 with their scanner antenna. That alone should tell you something.

Good listening.

Licenses are not degrees. They are no more than permits. Thier value
should be nominal. You should evaluate an individual ham by his/her
actions, not by his/her license. Besides, one doesn't really need to be
a "tech whiz" to be on air. But for those that are "tech whiz's", well
congratulations. If "tech whiz's" are looking for paper recognition
(which is silly in my view), then perhaps a note or something could be
atached to his/her license -- however, there is no need for assigning
radio permissions based on this.

> It's no different than the bogus network "certification", that

> the testing methodology.

Are there people getting paid on the basis of their amateur standing?
Sort of gives new meaning to the term "amateur".

> Once upon a time, a ham license looked good of a job application or
> resume. Participation in what was then "the" technical hobby, was a
> testimony that the job applicant knew enough to pass the tests, which

Exactly.

someone who just signed on > the dotted line. That's human nature.
> Dave

Regardless of how long it takes to study for the ham exam, the exam should nonetheless be relevant to the requirements of operating ham radio. That is, while the exam should take into consideration requirements, it should not place too much emphasis on those things that are merely desirable.

I had one of these. It scanned slowly, had a lot of intermod and was not as selective as I liked. Sensitive enough, and it DOES have FM stereo output. Fits in a DIN size slot. Good camoufglaged scanner for folks where scanners are illegal in cars.

I realize that it's a difficult proposition to argue that certain transmitters would be confiscated. I did not intend to imply that this happened to me! I am aware of several instances when radios have been confiscated. I'm not talking about what you could buy at the local Radio Shack or Ham store. Enough said as I have seen it happen and nothing could be argued otherwise to change that fact.

I am wondering, what exactly is "River distress"? I sometimes will get broadcasts from it (about twice a day around 10 am & pm), but it's so staticy that I can't make any of it out.

curious curious and thanks,
Travis

I've been using a hustler discone here in northern Idaho for 4+ years and
love it! It's about 20 feet above the ground outside and I regularly listen
to signals form 60+ miles away on any scanner I hook it to. Tom

Have we lost sight of the case details where the jammer was
tracked by the FCC and arrested by the California Highway
Patrol on state-law violations pertaining to his activities?

The news release said nothing about amateur involvement.

Pretty obvious, Jim, Advanced class licensees don't lie. :-)
Why should they? Nothing to be gained by lying.

Yes, but nobody will believe you after April 15 unless you present
you license. After you renew, nobody will believe you unless you
present your *old* license. OTOH, nobody has any reason to doubt that
I have an Advanced license. BTW, I've been licensed since 1951, 33
years prior to 1984, and am a member of the Old, Old Timers Club.

Nothing said above about any individual case. Pleasure/pain is one
of the most general truisms in all of existence.

Each antenna was moved around the room for max S meter deflection. I have had all these antennas for some time. The testing was done over several months under different wx condx. Nothing scientific. But I have been around radios and antennas long enuff to know what works and what doesnt.

I did this testing because I have a 800 mhz trunked system that I wanted to monitor and could not with the stock antennas. The Max 800 antenna and RS cell antenna are the only antennas that would give me full quieting reception with this distant system.

I believe that this is becoming very common throughout the US. Here in the Dallas-Fort Worth, Texas they are used by the Texas Dept. of Transportation and cities. Yes, I believe that they are controlled by the antennas and the video out is hard wired to the central observation point.

They have guns and are willing to use them. They can confiscate
anything they please. After the guys with guns leave, if you don't like
it, you can complain to them or their bosses within the police
department or civil government. If you don't like the response, you can
sue them. This takes time and money. For many people, this is more
time and money than they are willing or able to spend.

For sale, I piece, NET-950 Mobile Data Terminal with screws but no
bracket. Detailed specs below, pinouts are included in text. Asking $250
obo

Photos upon request

Follow the below link for full documentation.
http://www.micronet.co.il/950.html

NET-950
MOBILE DATA TERMINAL
The Net-950 Mobile Data Terminal is designed to be
installed
in a vehicle and to provide a two-way messaging
interface
for the driver in Fleet Management and Automatic
Vehicle
Location systems. Specially designed keyboard and
display
provide user-friendly communication between driver and
fleet manager. The Net-950 Mobile Data Terminal has
been
used with various communication networks such as CDPD,
GSM, SMR.

The featureson this model are:

300 programmable channels
Police, Fire, Air, Marine, and Weather Service Banks for ease in finding local frequencies
Covers the following frequencies:
29-54 MHz
108-136.9875 MHz
137-174 MHz
406-512 MHz
806-823.9875
849.0125-868.9875 MHz
894.0125-956MHZ
Normal and Hyper Search Modes
BNC Antenna
Capable of Tracking Motorola Type I, Type II, and Hybrid Trunking Systems
Backlight
Battery Saving Function
A.C. power adapter and instructions manual included.

The scanner is in mint condition. I'm also throwing in a copy of Police Call. I'm lookin to sell this scanner for $170. I will also pay for shipping anywhere in the 48 states. Email me is you have ne questions.

Jay

Exactly. I had a friend who received many radios from a decomissioned Navy ship. They were legally transferred to him in a property sale. Later the "men in Black" showed-up at his door and wanted them back. From what I know, they were simple HF radios. Nevertheless, he had no choice--give them up or go to jail and give them up anyway.

Now, they could transmit but he did not transmit as he had no time to set them up.

End of story. If you own certain transmitters you will could get in trouble.

I think it is a great choice. Even for a beginner. A few months ago I got my first scanner, the 245xlt. I have not had any problems learning to operate the scanner. I am scanning Motorola and EDACS trunked systems as well as conventional systems. I have not encountered any performance problems with the scanner.

1279. Re: Las Vegas frequencies

Newsgroup: rec.radio.scanner
Date: 2000-01-11 00:00:00 UTC
From: a6m2bzero@aol.commotion
Message-ID: <20000111185256.29791.00002007@ng-fe1.aol.com>
Source record: 96666

<< Also, any
other frequencies in LV which are interesting?>>

For a visitor, I'd recommend programmimg the following:

Metro Police channel 2, Southeast Area Command which includes the Strip and bike patrols: 159.0900

Channel 4, Downtown Area Command which includes the downtown hotel casinos and the Fremont Street Experience: 158.7450

Channel 8, car-to-car: 156.2100

Metro Police at McCarran Airport: 155.880

jails: 155.145, 158.880, 155.685, 453.625

a Mot. Type I system, fleetmap E1 P8, freqs: 852.4875, 853.9375, 856.0125, 856.1625, 857.5625, 859.1625, 860.1875. IDs of interest are 400-1 Binion's Horseshoe security, 405-1 Fremont Street Experience bike patrol. Other users of less interest are the Clark County School Police at 402-1 through -7, actually more interesting at night.

a Mot Type IIi hybrid system, fleetmap E1 P16, freqs: 855.7125, 856.2125, 856.2625, 856.4375, 856.7125, 856.7625, 857.4875, 857.7625, 858.7625, 859.2625, 859.4375, 859.4625, 859.9375, 860.2625, 860.4375, 860.4875, 860.9375.

Program for talk groups 100-2 (Airport Control Center) and 100-7 (security for Airside Operations, Services, Parking and Transportation for Landside Ops), both at McCarran Airport (talkgroups run 100-1 through 100-15 but most are not interesting for casual listening).

Also program for Las Vegas City and Clark County Fire: 40976 City east, 41008 County west, 41040 County east, 41073 City west, 41104 North Las Vegas, 41136 City south, 41265 Downtown/ Airport, 41424 and 41744 fireground, and 41808, 41010, 41009.

It's not listed but I have a feeling it will work, perhaps at
least with one.
I'm not completely satisfied with the controls of either, but better
compared with the alternative of the program offered through the
Alinco site.
If someone has something on this, let me know.
Thanks

Get one! It's great! You may run into problems but look around, there are tons of places to go for help. If you live in the PacNW let me know, theres a listserver you can subscribe to with local people. We'll be more than happy to get you up and running. If you don't live in the PacNW I'm sure there is a listserver or something where people will help you out.

1283. Radio Shack discone & 50Mhz element-mine came with one

Newsgroup: rec.radio.scanner
Date: 2000-01-11 00:00:00 UTC
From: Richard Davis <davisra@rcn.com>
Message-ID: <85gitn$9mv$1@bob.news.rcn.net>
Source record: 96670

Mine did. It had a HF dipole with a loading coil. I think it's okay down to about 25-30 MHz. I swept it with a Frequency Domain Reflectometer and it stays below 3:1 SWR between 25-1200 MHz, but doesn't drop under 1:1.5 too often.

Bud wrote in message ...

Many people seem to think that 5wpm code will be the death of Amateur Radio. Seems to me that most folks who wanted in without code have done it already, and it hasn't trashed VHF and UHF too terribly. There will be a great rush to upgrade, but many of these folks have HF priveleges already.

Has my (*pre-VEC*) Extra been cheapened? No. Has your (*post-VEC*) Extra been cheapened? No. You've earned your priveleges. I've earned mine. I use the pre-and-post VEC to demonstrate that the last time that 'the FCC screwed Ham Radio' the hobby survived...and some may say prospered.

I won't talk about the "Incentive Licensing" fiasco. That really did screw Amateur Radio. You went to bed one night, and woke up the next day with 50% of your HF priveleges gone! We haven't lost anything here!

The only reason that the code exams exist at all is the (old) notion that we as hams needed to be able to intercommunicate with, and/or prevent interference to commercial stations.

Having been a budding commercial (shore station) Morse op in my younger days (read late 1970's), I got to take a wonderful FCC exam. 25wpm mixed groups, 5 minutes, perfect copy. No exceptions. No fill-in-the-blanks. No multiple guess. Just an RE with a tape reader(remember those ?). Then, I got to send. Same 25 wpm, no mistakes...he gave me a page from the Wall Street journal. I don't ever think I've seen so many numbers at one time!

Does this make me a 'better' ham? I doubt it!

The theory was ALL tubes. Heaven forfend that the lowly transistor ever be used onboard ship! (Realistically...the static charges around a ship at sea are incredible, and many PA's are still tube-type, satellite or not).

Does this make me a better ham? Hell no!

The purpose of the technical exams is to prevent us from electrocuting ourselves and our neighbors.

The purpose of the rules and regs exam is to prevent us from trashing the commercial and military frequencies.

Should the exams be 'toughened'? Yes, a little bit. We should be able to demonstrate enough knowledge to prove that we can operate a station without trashing each other. There should be some basics of the more esoteric modes of communications. This will now include CW, for better or worse.

Should the questions and answers be published? Emphatically, NO!

If the questions are published, the 'multiple choice' answers, and the detractors, should not be. This is not to act as a 'filter' to keep people out...quite the contrary...we need many more people populating 'our' bands. The theory doesn't have to be difficult, but it should PROVE that an individual can safely operate a station...and not PROVE that a person can memorize 'trivia'.

How many 'old timers' (yeah...right) 'BASH'ed' their way in?

For those of you who don't recognized the reference...Dick Bash published books in the early 80's that had the questions from the FCC exams. He depended on hams who took the tests to 'smuggle' the questions and answers out to him (not physically, but from memory). So don't let anyone tell you that it was never that way in the 'old days'!

It is up to us to determine how exams are arranged, through the VEC system.

It is up to us to welcome and teach the newcomers. It's a hobby, fer chrissake!

Ars longa, vitae brevis! (the Art is long, and life short!)

73 and keep those flames and letters coming!

Bill WA3RA (ex KS3Y)

BTW...about 50% of my operating is high-speed CW. QRM? What QRM?

This is true, no doubt and I don't doubt a moment that the police can
and will take any radio they feel like. BUt where is the rule that
prohibits posession of a modified ham radio? Ham radios are
particularily exempt from "type acceptance" to allow the experimentation
that we are all so famous for. Seem to me they cant abscond Legally with
your radio as you haven't broken any law...I know they do...but.

It sounds like a better antenna than the one from Radio Shack that I was familiar with. When in the Army my group used discones but they were considerably larger than what I've seen available commercially. I have the ICOM and I transmitt across a broad frequency range on it. Its duty cycle is high and it is holding-up after three years on the tower. I made the climb up about two weeks ago and noticed that several elements seemed loose. I backed-out the screws and applied a thread-lock on every element. The wind induced vibration up high was apparently shaking it loose. It wasn't much of a problem, though. As I said, it held together for three years.

I just don't know if I would get the same performance from the Radio Shack antenna. Personally, I wouldn't take the gamble.

I've had mine a week. I don't think it's difficult to use, and the manual's a lot better than some.

If your local police and fire are trunked, the 245 is one of the few choices.
If you want to monitor trunked and conventional systems simultaneously, it's your only choice (I'm not counting the PRO-92).

Go for it.

Bitch Bitch Bitch! Where were all you cry babies when the ARRL asked for petitions regarding the restructuring plan? Just how many expressed their feeling to the FCC? before the announcement! IMHO the ones that cry and whine the most did the LEAST to express how they feel about code or no-code where it would of mattered. It's to late so it's better to accept the changes and support the man and woman in this hobby of ours to upgrade. The actions and support that is shown today will greatly effect amateur radio in the future. And thats my 2cents worth.

I believe that the Radio Shack discone antenna does not have the 50Mhz center element. It is not a good choice. Find one that has the center element and it really needs to be MUCH larger than the Radio Shack discone to be more sensitive on the lower frequencies. ICOM makes one that will work well for you but will cost much more than the Radio Shack antenna.

And that is what I was refering to. If CW usages declines appreciably,
the justification for special band segments for CW will diminish as
well.

Frank, no-nonsense comments that are pretty much on the mark.
Unfortunately, while those of us who already see the light, will agree
with you, those that refuse to accept another perspective, will argue
their dogma until the ground reclaims them. What's that about teaching
an old dog new tricks?

Like the old saying, "try to tell a nut that he's nuts, and he'll swear
that you're crazy".

Then why to people go to college to get a degree? That "piece of paper",
like a ham license, is a symbol of what you've endured in order to EARN
the privilege of being what you are.

I know sveral "computer whiz" guys, that are 100% self taught. They
attack thier hobby, with intense enthusiasm, and are probably as smart,
if not smarter, than "book taught" college guys. But you know what? when
it comes to finding a high level computer job, they have it tough
because they lack the PROOF (the piece of paper) that says that they
really know what they are doing.

> Here's my angle: I am looking at the person, not the paper. I guess that
> I'm too old-fashioned, eh?

You cannot ascertain, with any certainty, the level of qualification a person has, through a simple personal interview. Remember, you might LIKE the person, but the fact that he shot a 65 on the last 18 holes, drives the same kind of car, and has a hot looking girlfriend, mean nothing as far as far as job qualification goes. Any documentation, licenses, degrees, etc, that someone has is a testament, to their skill level. A ham radio license used to be highly regarded in that vein. Today, that is not as true.

>
> > And it is still true that the value something has, to its owner, is

The "piece of paper" is only a symbol. It's what it stands for that's important. A ham radio license is only the starting point. Hopefully, a person will learn more after being licensed. But for many, the achievement of the license, is acknowlegement that they've reached a milestone in their goals. Life is but a series of goals. Why diminish the value of someone's goals?

Dave

> should be nominal.

The license is basically a permit, but it is also the permit to operate some potentially dangerous equipment. Equipment that can cause harm in some cases, and interference in others, if not operated properly. By passing the "permit" exam, you are basically providing proof that you know enough (in theory) to stay out of trouble. If for no other reason, that is what makes licensing necessary.

Why do we license drivers (Other than the cynical answer "to fund the governement via fees")? Would you feel safe on the road, if you were aware that people did not have to pass some minimum skill and safety testing before being allowed out there with you?

> You should evaluate an individual ham by his/her actions, not by his/her license.

True. But that still does not diminish the value of the license as a certification.

> Besides, one doesn't really need to be a "tech whiz" to be on air.

Ask any CBer and he'll agree with you. But is that what we want for ham radio?

> But for those that are "tech whiz's", well congratulations. If "tech whiz's"
> are looking for paper recognition (which is silly in my view), then perhaps a
> note or something could be attached to his/her license -- however, there is no
> need for assigning radio permissions based on this.

There certainly IS. I'm sorry, but you can't tell me that a person should be given the responsibility to run a 1.5 KW station, with variable frequency control, with the potential to cause harmful interference, harmful radiation, and the potential for self injury if used improperly, without some form of testing first? That's insane! The more you know (and can demonstrate) the more privileges you should have.

If you just want to yack with your "bro's", then use the internet,
phone, or stick with low power radio services. That way you can't hurt
yourself or anyone else.

It's an analogy. You drew the wrong parallel. This has nothing to do
with who's getting paid for what. It's about the recognition of
certification, and the value that it projects.

>

No arguement there. But the line between "required" and "desirable" can be subjective. What's required to you, may not be for another person. That's why we have the FCC, who hopefully has the foresight to make that decision in an unbiased manner.

Dave

I didn't say that the current testing was perfect. I agree that you
should be required to LEARN the materrial, rather than simply memorizing
Q&A's.

> Nothing in the Amateur testing has ever guaranteed that the person would
> be either mature or responsible - or that they wouldn't cause trouble.

Nothing in the driver's license exam guarantees that either. But
hopefully, it DOES show that they've achieved the very basic minimums,
and hope that the person has some common sense as well.

That is certainly one distroted way that some people view life. Some
people think that they have more "rights" than they are entitled to.
This sort of "spoiled thinking" is based on, IMHO, having never been
taught the meaning of the word "NO" as a child.

>

Also agree! Many old timers put down the no-coders, under the
mis-informed, preconceived, sterotypical, notion, that no-coders are
nothing more than CBers. I don't think they will even get it through
their thick skulls, that there are some really talented communications
guru's in the making on VHF/UHF thanks to the no-code license. THEY will
be the ones that finally bring ham radio into the digital age, not the
old time CW ops, still passing traffic (and wind) the old fashioned way.
In the time it takes them to copy one piece of traffic, a modern digital
network can send a hundred times that amount across the entire globe and
back.

Well, look at the bright side, Dick. The advanced class ticket
will become the *PREMIER* ticket in ham radio because it required
13wpm code, not a measly 5wpm like an extra ticket. :-)

He never said what type of equipment he is installing. If it's Radio Shack or Bearcat or other similar Wal Mart electronics then what's the point. Use zip cord for all it matters. You'll just be riding around listening to out of band interference anyway.

I do not question the rules and regs. I simply do not think "Amateur"
radio operators help Police agencies because of their "civic duties". I
believe it's for the attention. I however do not have "Blind Faith" in
police agencies either.
It seems to me (at times) that hams go out of their way to help the people
who will screw them the most later. I suppose I do not like doing much for
my Govt.
as they do very little for me. They already TAKE what they want. If I were
Ramsey, and I had helped so many, I would feel insulted! (assuming he is
innocent of all charges).
In a former life when I drove a "Big Truck" I had to carry a fire extinguisher.
Federal Law. However, I question if I would relinquish it to law imforcement
without a deposit. As it would be returned empty, and at that point I
would be in violation of safety laws punishable by fine. I have no doubt
that upon entering a scale and being inspected, I would be ticketed
(explanation or not).
To paste your lines:

(a) Recognition and enhancement of the value of the amateur service to the
> public as a voluntary noncommercial communication service, particularly
> with respect to providing emergency communications.
>
I do not see the above as grounds for foxhunting illegal transmissions for
the police, on police bands.

And if you started supplying "voluntary noncommercial communication service"
to the public on a regular basis, (non-emergency) you would have to pay
from someone.

Feels absolutely great, Brian. The Advanced license will
become the premier class in the ARS. The 13wpm Advanced
will be much more highly valued than the 5wpm Extra. :-)

Good question. But the R2 doesn't have a pot, its all electronic controlled by hard to use little buttons. Not easy in the dark.

No, the Boston Police use 460 MHZ, the city of Boston trunked system is used by city services such as park rangers, parking enforcement, DPW etc.

Agreed. I researched this a few years ago when I came in to possession of a
bunch of old Motorola's from the LAPD.

You can own any rig you want, just don't transmit unless you are licensed to
do so.

Since we receive little recognition from our community service, evidenced by the fact that most of my neighbors/co-workers/friends--indeed myself (before I became a ham) are completely unaware that ham radio is "out there" during an emergency, the correlation between public service and "attention" for said service cannot be made.

> I however do not have "Blind Faith" in police agencies either.

Oh, believe me, neither do I. But, I don't look at my service as much for them as I do for the people in my community. I simply use an available mechanism to help my neighbors/co-workers/friends. My disdain for the police community, in general, is well known to my fellow hams in this area.

> It seems to me (at times) that hams go out of their way to help the people
> who will screw them the most later. I suppose I do not like doing much for
> my Govt. as they do very little for me.

It seems, then, that your anger is misdirected toward the amateur radio community. As I said above, I do not look at my public service as helping the police and "govt." agencies as much as I feel I am helping my community.

>
> I do not see the above as grounds for foxhunting illegal transmissions for
> the police, on police bands.
>

While an extreme scenario, you may feel differently about that jammer disabling police frequencies if the ability of the police to save someone's life (maybe your own or someone you love's) was impeded by some jerk thinking he/she is being funny.

> And if you started supplying "voluntary noncommercial communication service"
> to the public on a regular basis, (non-emergency) you would have to pay
> from someone.
>

Well, I wouldn't have to pay someone :->. We, by our Rules and Regulations, are not allowed to perform that service on a regular basis...and it is inferred by those same rules that governing agencies are not allowed to request our assistance on a regular basis.

I have learned, as a new Newsgroup person, that too much time is spent in here degrading and arguing. I don't want our exchange to become that. It is obvious to me that you are very angry and resentful and, while I understand where you are coming from, it is far beyond me to solve whatever history it is that has brought you to your current way of thinking. I would ask only that you please remember most of us commit to public service purely for the benefit of our community more than for the benefit of any one agency. We also know that our service goes largely unrecognized.

See my previous post Bud. In the US, there is NO RESTRICTION ON OWNERSHIP!!!!

The ONLY exception to that is an 'indirect' restriction through 11Meters.

But then, after seeing your smartassed response to the guy asking about sharing an antenna, I see where you're coming from, and can guess at how technically adept you are...

No. But you would probably get better receive performance if you
could get some kind of 'ground plane' under the antenna.

>Welcome to ham radio-set your watch back 40 years

Your main web page includes a link labeled "The Future Of Ham Radio"
which, when clicked, leads to a page titled "Code Forever" - if the
statement about setting your watch back 40 years is true, guys like
you are a major reason why.

>Please visit my World Wide Web Site, you have never seen a page like it.

I did visit. I have never seen a page like it. I hope to never see one
like it again:

>4. How you know you are a ham.

Sample items from the above: When you find yourself mentally
undressing your rig....when you'd rather turn on your rig than turn on
your wife.

Also shows a cartoon with a woman in bed with a man on one side of her
and a pig on the other, the woman is saying "I'm surrounded by hams!"

>7. The writings of me and others on ham radio, hear a typical ham contact.

The writings of K1OIK on ham radio consists of a scan of a page from
Radio World Magazine on which the magazine printed a letter in which
K1OIK disparaged ham radio by making such statements as this:

"Hams are required to serve the public, but in fact they are serving
themselves. Worse, they cause interference to other services (like
your TV) and they erect large towers and guess what, there is nothing
you can do about it."

The brilliant K1OIK also asserts, "Cell phones have replaced the need
for most emergency ham communications in this country."

>12. See now the future of ham radio.

Hopefully it won't include too many hams of your ilk.

If you equate thrill to pleasure, then you are right.

I have a good friend who has been on one of these manhunts for real. He says he actually got a high everytime the moron transmitted and they got closer to locating him!

He got no money - just a polite "thank you" from the local DA (not even the police chief or other cops) when it was all over.

The best PCR-1000 DOS program has been adapted to support the AOR AR-3000A, and is ready for serious beta testing.

http://www.micosyen.com/radio.htm

A new version of the PCR-1000 program can also be found here. Two bugs have been fixed and changes have been made to ignore the different syntax in the frequency files required by other radios.

The R-9000 and AR-8000 are next.

I am not sure angry is what I am, possibly disinchanted. I too would be willing to help my community (not that I have one). I do help my neighbors when needed.
(not in communications...yet) I could babble on about injustices forever. I shall save you from that. (whew!)
I'm sure some (or many) of my polictical views intertwine with radio, as I hear or see hams bringing the 2 into the same arena. Would I help local police find a missing kid in the woods by supplying communications if needed? No. I would however loan them the equipment. I would also help them search by horseback.(been there done that) Do I think my equipment would be returned to me in the condition loaned? Probably not.
Are there exceptions? Of course.

If someone stole my gear, would I call the police? No
Would I get it back if I did? No
If they did recover it would it be returned to me? probably not. (at least for some time (evidence etc))

Will someone steal from me here? NO
Would my neighbors protect my property? YES
Would they call the police? uhm???

> While an extreme scenario, you may feel differently about
> that jammer disabling police frequencies if the ability of
> the police to save someone's life (maybe your own or
> someone you love's) was impeded by some jerk thinking
> he/she is being funny.
I think that I have paid dearly over the years, the police should (and probably do) have the equipment to do the task themselves. If they do not, maybe the police agencies ie: CHP should not spend $3000-$4000 each on light units for their cars, and invest in fox hunting equipment.

possibly the US Border Patrol could loan them theirs, as they do not really have need for it.

Either way, I use the bands allocated me to converse to/with others, to learn, and to save myself phone bills, postage...etc. Not to specifically help my, or your community. I did not intend to become a public servant. Did you study for, and get your ticket....did you save, purchase or build your station to help the comunnity? Was that you're initial intent? We have a neighbor lives a few miles away, my daughter talks to her on 11 meter. Our neighbor is a toll call.
My father lives in CA as I used too. One of us saves money with radio. I've met some real interesting folks on the air...that was my intent.

Somehow I think that's okay. Yes?

I suppose if others want to do other things that's okay too. Your point made.

Dunno, Jim, will you? My statement means that pre-April 15
extras will be forced to present their licenses to prove
that they are not 5wpm extras. Advanced hams will have
no such problem. :-)

You'd be in big trouble owning transmitters for a number of frequencies if
you were found to be in possession of them. You would be made to explain
what your intended purpose was and the equipment would be confiscated. I
speak from experience.

You must be new to ham radio. MY extra ticket required 20 wpm, not 13. (I
took the test in a real FCC office in Buffalo, NY in 1984.)

Why would Bill know? New York City (where he was indicted) is over 400
miles from Niagara County.

And I don't know the frequency, either. If I did, I would put it into the
NF2G Scannist Pages [hint, hint].

Hire a lawyer, then. The police can only confiscate property that is used in the commission of a crime, or that is designated as contraband by a particular statute. There are no radio transmitters that have any such designation in the United States. You can have police-frequency receivers confiscated in certain states where mobile use is prohibited, but they must (in New York, at least) be returned to you in original condition after trial.

The 245 is an excellent first radio. You can use it for conventional (non-trunked) frequencies and move up to trunking once you're familiar with the radio. That shouldn't take more than a few days.

|> ...

Well, foxhunting has no necessary legal connection with having a
Ham radio license. The ham license is related to your permission to
transmit. Anyone can listen without a ticket.

The License may make the results of your foxhunting carry more credibility,
but anyone could take a scanner, antenna, attenuator, etc. and hunt down
a signal.

(Yes, I know some states restrict listening to police frequencies, so
this doesn't strictly apply everywhere.)

A large part of the difficulty in hunting down a jammer can be to
1) find a place where you can hear him on the input frequency if
he's jamming a repeater or 2) getting close (e.g. an apartment building, a
block, etc.) If I were to be involved in such a case, I might try
to just narrow it down to a small area and leave it to the police
to narrow it down from there. I wouldn't want to have the court
case depend on me as an "expert witness".

The other worry would be if you gave the police some good information
and they then go after the wrong person. e.g. if they break down the
door of some innocent nearby person who has an antenna, but isn't
the person doing the jamming.

The poster is referring to after April 15 when all classes will only
require 5 wpm. There will no longer be any advanced class license
issued, but those who currently hold an advanced class, can continue to
hold that license indefinitely.

Your statement "Anyone whose license permits the use of CW...." is very misleading. All licences permit the use of Morse code. The Morse code test is not about whether the operator is allowed to use Morse code or not, but whether the operator is allowed to use bands below 30Mhz. Passing a Morse code test is not necessary for an operator to legally use Morse code on the appropriate Amateur bands.

Dave Heil wrote:

: use at one time but no longer has any practical applications.

Tell that to the military, who still require CW capabilities in their
portable radios (at least some of them). I have not talked to anyone
who has gone through the radioman schooling recently, but I suspect
that they require that all radio operators at least learn the code.

It does have uses - even if your radio is an FM rig. Simple keying
of the carrier produces a CW signal - better than nothing if the
microphone or modulation circuitry dies.

Uh, Dave. CW is allowed on ALL HF frequencies. It is the only mode
where this is true. There are just certain band segments that are
set aside for CW only.

what a useless waste of a newsgroup! The new rules are the new rules. You can stop being a ham, or you can continue being a ham. What's your choice? Stop gasbagging on this ng, as it has nothing to do with your subject. Youratchetjaws are beating a deceased glue ingredient, and we're tired of the whining!. My 9 year old daughter doesn't drag stuff out like this, and neither should you. Get a grip!!!!

In rec.radio.cb Dave Hall <nojunkmail_n3cvj@worldlynx.net> wrote:

: It's no different than the bogus network "certification", that
: Mickey-soft and Novell started for computer professionals. It's a piece
: of paper, that says that you know something. The difference is that MS
: and Novell are making big bucks off of everyone that studies and takes
: the test. But it's only worth something if you recognize the validity of
: the testing methodology.

Funny. I just received e-mail from MS today - offering their Certified
Network Engineer (or whatever it is) class. The cost is $8000, but they
pay me $10,000 when the class is completed.

: Maybe we just want to make sure that everyone who plies the ham
: frequencies has enough technical knowlege to keep them out of trouble,
: and enough responsibility and maturity, that they won't cause trouble.

The knowledge requirement went away as soon as they started publishing
the question pools. It then became a matter of memorization.

Nothing in the Amateur testing has ever guaranteed that the person would
be either mature or responsible - or that they wouldn't cause trouble.

: And it is still true that the value something has, to its owner, is
: directly proportional to how much effort one had to expend to get it. If
: you had to apply yourself for the better part of 3 or 4 months preparing
: for, and passing the test for a ham license, you will be less likely to
: abuse the privilege, than someone who just signed on the dotted line.
: That's human nature.

Maybe. Or maybe someone who had to work hard would ignore legal
requirements when he/she though it possible to get away with it,
as a "right" for having to work so hard.

I don't know why the old Extra holders are so upset about the new rules.
It does not degrade THEIR efforts, or lessen the value of their licenses.

Remember when you had to hold a license for 10-20 years (I forget how long)
before you were eligible to apply for an Extra Class license?

Personally, I feel that the publishing of the question pool is wrong, but
it is only my opinion. I believe a person should have practical knowledge,
not just a bunch of memorized information.

On the other hand, I have more respect for the recent no-code tech who
behaves himself on 2 meters, and maybe plays with packet radio a bit, than

I do for the notorious groups of troublemakers on 75 meters and elsewhere.

I have many of the same antennas you "tested." As you know, they're all
sorts
of different types, not all mag-mounts or whips that directly connect to
the radio, etc.

So it seems that you need to elaborate on exactly how/where each
antenna
was placed before a reasonable person could make any decisions based on
your
findings.

Brush up on your 10-codes Boys.

The CB-RL, Citizens Band-Relay League in Newington, CT, is
going to update their Operating Manual with a section on 10-codes
and CB Lingo so old Hams can understand what the new hams
are talking about. There's also going to be a section on how to
properly tune a transmitter for maximum over modulation & Splatter.

>if he just know the right people.

1st you say the VE system is corrupt then that perhaps most VE's are honorable...Which is it? VE's risk their own license every time they sign for someone else's.... I have yet to meet a VE (and I've known a hundred or more) who would risk their own Extra Class ticket to "hand out" a license. Using your logic of painting the entire VE sytem black because of a few improprieties, then perhaps all "Coded" hams are like those fella's on 14313kc, 3950kc.... I suppose you'd throw out a cart of apples cuz' you find one bad one!

>I no longer believe that the ARRL is promoting this hobby in a manner
>which will cause me to be proud to be a Ham.

Then renounce your membership.... then go see if you can find anyone else who's fighting for your interests.... K1MAN? ...73 Magazine? ...Gordon West? ...W5YI? ICOM? ...Yaesu? ...Kenwood?
...CQ???.....Whooooooooooooooooooooooo???

> I do believe, that in a
>very short period of time, Ham Radio will become a vast wasteland,
>where no one with any intelligence will wish to associate.

I believe we heard all this before, at the introduction of the No-Code Tech license. It has not come to pass. Tell me.... what exams did you take? ...Did your first license require a CW exam? Did you take one of the easier exams under the VE system (where you had access to all the answers), or one at the FCC field office??... Did you have to prove you could send good code as well as recieve it? ...Did you have to upgrade your Novice license in 1 year or lose it?

My point is... times change, licenses change, requirements change.... LIFE is change.............. adapt to life as it IS and WILL be or fade away like a dinosaur.

Amateur Restructuring, Liberal Democrats, and No-Coders.

The FCC's restructuring plan shouldn't be a surprise to
anyone. After all, it comes out of the Liberal Clinton
Administration. Conservative republicans are willing to work hard
for their rewards, but Liberal democrat No-Code CB whiners want
everything handed to them on a silver platter. The democrat
whiners want to get ham licenses as easy as they get their welfare
checks. And the Liberal FCC, part of the Liberal Clinton
Administration gave the Liberal No-Code CB whiners what they
wanted, and the rest of us got shafted. Liberal Democrats like
to steal treasures from the hard workers, and give to those who spend most
of their time waiting for another government hand-out. When liberals do
this, it makes them feel important & needed.

restructured Ham = Welfare Ham.

I graduated as the Distinguished Honor Graduate from the Army Signal School at Fort Gordon, Georgia in my Telecommunications field in 1987. Code was out then. In 2000 it's probably taught in History class! For the many high speed mutually independent telecommunications systems of the modern battlefield CW has no role.

It is not a question of whether the code is or is not worth anything. It has not been worth anything since 1945. Rather, it's a question of a bunch of guys who had to do something to get their license and now you don't have to do this anymore so they are schooling together like guppies to asert that their "higher" learning is the best and everyone else is "inferior". What a joke! No one buys their song and dance for a minute and neither did the FCC. The question is when are these people going to admit that things have changed and their "educations" are obsolete. It is hard on a person when they come to the realization that they have passed into obsolescence so hearing them strike out in utter frustration should not be a surprise.

Amateur Restructuring is not a simple, one-sided issue, although many would like to force the many different viewpoints into one small box.

Times are changing, and whether we like it or not, there are realities that have to be faced. Here are a few.

The "magic" of your voice (or code) traveling thousands of miles is basically gone. I'm old enough to remember well the first color televisions, trans-Alantic TV signals, etc. When I first experienced amateur radio (as an early teenager), it was beyond belief that you could actuall talk to someone long distance wireless. I was even awestruck at some cheap walkie-talkies I owned! Now, we communicate effortlessly worldwide via the internet, instantly.

Commercial interests want more bandspace, and amateur radio operators who are time-frozen in the past have a poor argument to occupy valuable spectrum space to discuss their gall bladder surgery, latest bowel movement, etc., simply because they grunted it out years ago to meet the requirments of 13 wpm, and so on. Amateur radio was intended from the start to focus on public service and to encourage growth (in electronic knowledge). It was never intended to be a static, backward-looking social club, remembering the "good ole days". The very nature of amateur radio points forward.

The technical aspects of amateur radio have changed incredibly. Twenty years ago, you could still work on your own car (plugs, oil change, tune-up). Check out the lastest cars, and tell me how much you understand. The people I first met in amateur radio built their own rigs (early 60's). Today, that same rig would splatter unacceptably all over the band. Then, most built their own. Today, probably 98% use quality, name brand, sophisticated rigs, with tight specs on both transmit and receive. It's a changing world.

YES, some things could get better. Getting rid of the corruption in the VE program would help. Riley Hollingsworth has been extremely good news for the hobby. But perhaps we should require computer aptitude tests as part of the hobby (to weed out the old farts). Maybe we should ban discussions of all personal health problems, not to mention useless nets, that accomplish little. Simply passing the CW and written test back then is not a lifelong license to sit back, and reap the "reqards" forever in careless, meaningless blabber. I have always been in favor of amateur radio operators having to provide "evidence" for their continued re-licensing, such as proof of public service, classes taught, projects involved with, etc, much as medical

professionals have continuing education to keep them sharp. One statement the FCC made in their R&O was that there was basically no correlation between those who learned CW, and those who were proper station operators, or were significantly involved in public service. I couldn't agree more. What right does a 30-40 year Ham veteran have to needlessly blab on, using maximum power (or more), with poor antenna matching, and generally abusing the spectrum. Yet, that person is exactly the same person who will argue themselves blue in the face about the need to keep the code, etc. They need a reality check.

There is plenty to compliment and plenty to criticize in amateur radio today. I compliment the FCC for having the guts and sense of REALITY to not only face the real facts of the day, but to do so in a way that doesn't necessarily favor any special group, including the ARRL. Hopefully the tests, method of testing, band usage, etc. of today's amateur service will improve, and retaining CW at previous rates was not solving the problem. Kudos to the FCC for being willing to move forward with guts rather than look backward with failing memory.

I'm in my 50's, and hopefulle young enough to still engage and enjoy the new realities and technologies that emerge each day. However, the "tomorrows" are owned by the young, and I hope I have enough sense and graciousness to know when to get out of the way. The FCC has taken an important first step. I hope during the year 2000 that they and the amateur community can find some good solutions to the problems we still face and better use of the privileges we enjoy.

AB7RS, you seem to be missing the fundamental point of the license exam. The license exam is not a final exam to proves skills or knowledge, it is an entance exam into the hobby of amateur radio.

You're not supposed to know everything when you pass that exam (for any license class). You learn about the various aspects of radio after getting the license.

And, with that goal in mind, the current license exam system is just fine - it does exactly what it was designed to do.

Wrong, Bill. After reading a discussion about this in another newsgroup, I checked with the public affairs offices of the radio training schools for each service branch. None of them were aware of any CW training still going on in the military.

One guy in an amateur radio newsgroup recently claimed that some special forces personnel receive this training, but both the Army and Marine special forces training centers say this is simply not true (they use high-speed burst communications through satelites for special forces communications).

CW has been dead in the military for a long time. I didn't learn it at the Army's Signal School at Ft. Gordon in the early 70's (MOS 31M). The Air Force seems to have dropped it even before that. The Marine public affairs officer was not sure when they dropped it. However, of the ones we know, the Navy seems to be the last one to have dropped it from all training programs about eight or nine years ago.

If you don't believe me, Bill, check it out for yourself. This is not classified information and I found each service branch to be very helpful and open about the subject.

The 245 is an excellent scanner,even for beginners.If you have trunking systems that you want to listen to then I would highly recomend it.As far as the operators manual, there are some errors in it.I believe you can go to http://www.strongsignals.net for more info on the instructions.

The Diamond discone antenna is probably the best discone for the money,
although I use a Radio Shack discone and have been very pleased with the
antenna's performance.

Recently put together using 1 set of TV dipole antenna and a 1 telescoping mast of similar length. I had several of these stock TV dipoles around so what the heck. The TV antenna is on a plastic T shaped mount that would pop into the top of the set.
I removed the 300ohm twinlead from the dipole and attached the ground from my coax to both of these telescoping masts . The other end of the plastic T was cut off, and the other telescoping mast was inserted here with the coax center conducter attached to it with a set screw thru the plastic. By my figures this aproximates a 1/4 wave ground plain antenna (missing 1 or 2 radials as it were) and is adjustable in the range of 75 mhz to around 400 mhz. With this arrangement I can locate on a window frame, adjust the length according to the range I want to scan. I suppose that with only two ground plain radials that its somewhat more directional, but it works in 2 diminsions and allows me to mount flat on a wall. Also radials can be adjusted from 90 to 180 degrees away from the center mast.

Reception not as good as my outside mounted antenna, but it does work well enough for a second scanner I have. Any ideas, suggestions and/or constructive criticism welcome.

Glen is right in that broad band antennas show varying impedance as you tune
across frequencies. However, the receiver and the antenna cable will
always be at a mismatch if you use 75Ohm cable with a receiver designed for
50Ohms.

You did say "every little bit helps", therefore though most of the time
you'll never notice the difference, (especially at 17') you should try to go
with the correct impedance. Check some of the web sites such as Cable
Experts, LMR, Belden and Radio-Ware. They have loss tables for varying
cables. While you probably can't put in true hard-line, you might give
consideration to a large flexible cable like 9913 if you can work with it
in your installation. RG-8X might be a good compromise between size and
loss.

�lvaro,

I too, like the Diamond discone. I've had one up for a year and it is still in great shape. No oxidation or rust. I like it's construction.

Which antenna is best, depends on what type of scanning you do. All broad band antennas, like discones or log periodics, are poor antennas but over a wide range of frequencies. It's a compromise. If there is a specific range of frequencies you want then nothing can beat an antenna specifically tuned for that frequency.

Also, direction and signal strength play a part in which antenna is best. If you wish to receive a week signal in one specific direction then a tuned, multi-element antenna is what you need. A yagi, a quad, or stacked halos may be what's called for.

So what's best depends on what you want to do. A discone is great for scanning a wide range of frequencies but it's on so-so on any given frequency. Life is just full of compromises!

I've used a RadioShack Discone for 5+ years. Love the antenna. Mines in my
attic and I can pickup a airport tower that almost 30miles away. Also does
great for MilAir. It will even do pretty well for 10 meters on my R71a.
Nicely constructed, and allaround great antenna.

There is a little box available that lets you
connect 2 CB - transcivers to a antenna.
this box switches off the one tansciver when the other one is sending.
this might work with a tansciver and a scanner too.

Everyone should get back to the real world.

The only thing to come out of all of this will be a sudden surge to "higher class tickets" (that won't really be the same techinal standards as higher class tickets from the past) and more phone band congestion.

There won't be any massive influx of new hams, and the hobby won't suddenly "turn around" and grow.

Testing never stopped the large majority of people from upgrading. It was only the people who lack memorization skills or enough motivation to spend a few hours a week memorizing the test who failed to upgrade.

The lowering of standards has never "pumped new life" into anything.

It'll make lazy people happy, and Kenwood will sell a few radios. Then in a few months it'll all die off and many people will start crowing "why don't we reduce requirements even more?".

If you doubt this, look at CB. CB fizzled desipite essentially being a "free band" with no enforcement and no license required. The only thing that was gained were manufacturers made money selling radios, and the low end of ten meters and proper users of frequencies in and around the 11 meter band were ruined in the process.

Vince,

Being a Republican with a strong Libertarian streak, I must ask, just what does Morse code have to do with radio? I mean, telegraphy(sp?) originated on wires are you using it to communicate these long diatribes?

I certainly hope you have done something to further the art of radio communication than manually operating a spst momentary switch and acting as a bio-modem.

Morse code can be fun, and I am personally pushing for my 13 WPM, maybe even 20, but it is for fun. Logically, it has zero to do with the theory, operating practice, or development of Amateur radio.

Please stop crossposting these posts to the sat group. I know not much goes on here, but this condescending saber rattling is NOT on subject.

Thanks

Christopher Cox
KC8FRJ

PS look at the bright side, this initially should have little impact on the A1 band allocations, and possible band crowding may spur more op.'s to use CW as a communication method.

When the nocode-Tech was introduced the amount of hams operators increased dramatically. Infact nocodes became the largest of the licensed groups.. and from that many nocodes became Generals needing to learn Morse code "WHY?" They wanted to be better than they were. Either for one of two reasons. "the bragging rights" or "self worth". I see the same thing happening to the new requirements, and that will be the drive for most hams in the future to become a code ham. This will also increase the Ham population. In either way allot of Code sent today is by a Auto keyer or computer. Most of the Hams I know that are General or above don't even remember the code they needed to learn to get the license. They just wanted it to talk on things like 10 meters. So I look at it like this. In the long run this is going to create MORE hams to help fight off the communication giants of the world who wish to take our freq. for there gain. WE HAMS ARE STRONGER IN NUMBERS!

None that I've seen that use Hamcomm, but you can search for WACARS which uses the sound card. Be sure you get a recent version. I never had much luck at all getting older versions to decode, but a month or so I got the latest release and set it to use the "new" algorithm and it worked pretty well.

Deal fell through again
SOOOOO I still have a Uniden bearcat scanner for sale
it is model number
BC145XLT 16 channel programmable
base model will work on 12 volts mobile also
VERY BASIC RADIO
it works great and looks pretty good also
I have the antenna and wall wart adapter
no manual but is super easy to program
The Freq ranges are about (guestimating)
30-50mhz
137-174MhZ
406- 512 MhZ
has priority and weather button
I can take pix if you need them
I would like $30 shipped for this radio
thanks Tiny

1403. Antenna for VHF

Newsgroup: rec.radio.scanner
Date: 2000-01-12 00:00:00 UTC
From: emarc23101@aol.com
Message-ID: <20000111234521.25715.00002003@ng-fw1.aol.com>
Source record: 96545

Anyone know of a good antenna that performs well in VHF high and low band?
Since I mainly listen to these 2 bands, I figure i'll get better results if I
use an antenna designed for this range.
Thanks

1404. Best cordless phone with these features?

I'm looking for the best cordless phone with these features:

Digital 900mhz or 2.4ghz with DSS
Caller ID
Digital Answering Machine

I want a phone with these features that is reliable and has the best sound quality (both phone and answering machine.) I also wouldn't mind the phone having a hold button on the handset, and speakerphone, but I can live without them if I have to. Sound quality is my main priority. I don't want to hear any hissing, clicking, low volume, or anything else. I want complete audio clarity. However, since I will only be using the phone around the house, extreme ranges (like down the street) aren't neccesary. Security (hence the need for DSS) is neccesary though. I'm willing to pay about $250 or less. I appreciate any help.

They also exist in Milwaukee and San Antonio. (among, I'm sure, many
other cities)

The ones in San Antonio are broadcast over the air on UHF channel 54.
If I remember properly, the transmitter is switched between the various
cameras, showing each one for about 5 seconds at a time. Saved me about
20 minutes last time I was there, by showing a picture of a nasty jam on
the road I was going to take out of town!

It is possible the parabolic antennas transmit the video to the control
point, if so I would suspect a frequency just below the wireless-cable
band around 2.4GHz. Equipment designed for MMDS reception might work.
I would tend to think it would make more sense to control the things by
wireline (because a cheaper line could be used) and use wireless
transmission for the video but you never know.....

A wonderfully well-thought out and reasonable response.
Thank you! I share your optimism that things will work out
all right.

I also agree with a number of points AB7RS made, especially
about the tests being too easy. As I read it, it will now be up to
the amateur community to determine the contents of the
question pools, and we should really concentrate on making
sure that the questions chosen represent a proper cross-section
of knowledge at an appropriate level of difficulty. And certainly vigilance
against dishonest VEs is a good idea.

Perhaps ARRL could take up the slack in high-speed Morse
and have special awards for (say) 100 QSOs at (13, 15, 20,
whatever WPM). That would have to be worth just as much
as an FCC document, and probably would look better on
the wall, too. :)

The actual regulations prohibit the external RF power amplifier for that band, not a basic transmitter. And possession of a linear tuned to the CB bands is one of those things that creates a legal presumption of intent to use, so a finding of violation by the FCC is very likely. The courts are not likely to be involved since the FCC's proceedings are administrative and/or civil in nature, not criminal. That's why they call it "civil forfeiture" when the government takes away your equipment.

Tom W8JI wrote:

>
> You didn't take away anything, but the FCC sure did!

No, they didn't. You earned whatever class license you
hold, and can lay claim to the set of skills you had to demonstrate to the FCC or VE when you were tested, regardless of what the FCC does now. That can never change. For that
matter, a ham license is not intended to be proof of some static set of skills that will forever remain the same. It's a permit to get on the air with specific privileges. The *only* way the FCC can change the value of your license is if they add or delete subbands from your current privileges. You're free to confuse

the effort you put into getting the license with the operating
privileges it grants you, but that's a classic case of mistaking
the map for the territory. So now it's easier for newcomers
to get your class of license, but that doesn't change what you
accomplished to get there.

And if it is so damn important to you
that people on the air know you're an "Original Extra" or whatever, to set you apart from the folks who only had to do 5WPM, fine. You'll sound like an elitist, but go ahead if it
will make you feel better. People will know what you mean
if you say you're an "old extra" or "original extra".

>
> It's typical for those who dislike working for something and who
> expect handouts to not understand why some people have pride in what
> they accomplished.
>

You can be proud of your accomplishments and also
accept without bitterness that the world has changed.
5 WPM does take work and study, and is surely not a "handout".
I know several people in their 20's and 30's struggling
to achieve their 5WPM, who would be very insulted by
your characterization of this as a "handout". Yes, it's easier,
perhaps much easier, but it's a lot more work than most lazy
people would ever put forth. 5 WPM will do a fine job of
keeping people looking for handouts off ham radio.

A lot of times I hear this "handout" crap, and I see a
survivor of a hazing ritual, known as "high speed code", resentful and angry
that others will have an easier time than you had. Hopefully this is not your
real motivation for being
so upset at the changes.

>
> With that in mind, I understand why you agree with the suggestion

Maybe you're talking abotuhte marie radios we can buiy on e-bay? Or teh miltiary surplus trnasceivers? How about the surplussed former polioce and fire radio's, many of htem still on the current channels?

If you use 'em wrongly, they - and you - are fair game. But use them rightly, no problem. Example: In this area a number of hams are using 800 Mhz (not a ham band!) transmitters as part of their stations. They triple to 2.4 GHz, which IS a ham band.

Cheers,

Cortland

In article <387BAFE3.345B6140@earthlink.net>, n5gpc@earthlink.net says...
>I believe that this is becoming very common throughout the US. Here in the
>Dallas-Fort Worth, Texas they are used by the Texas Dept. of Transportation
>and cities. Yes, I believe that they are controlled by the antennas and the
>video out is hard wired to the central observation point.
>

Seattle put there traffic monitors on a webcam. Any idea
if Dallas will do the same?
